Light sources serving life and other sciences: A view from the US

Thursday, 18 May 2023 11:00 (15 minutes)

The capabilities of light source user facilities continually expand. High brightness and high time resolution are two technical advances that are popular globally. In the U.S., investments are being made across many facilities, in these and other areas, to support the need for new imaging and dynamic studies. I will provide a view of the strategy behind, and implementation of, these advances.

Select Topic 1

Strategy of Large Facilities

Select Topic 2

Modern Methods in Structural Biology and Dynamics

Primary author: FALCONE, Roger (University of California, Berkeley)

Presenter: FALCONE, Roger (University of California, Berkeley)

Session Classification: Strategy Discussion
