

## N(1520) electromagnetic transition form factors

*Thursday, 8 June 2023 14:48 (20 minutes)*

The electromagnetic transition form factors of the nucleon provide important information on the internal structure of hadrons. A model-independent dispersive calculation of the Electromagnetic form factors  $N^*(1520) \rightarrow N$  at low energies will be presented. Taking pion rescattering into consideration, we derived dispersive relations for the  $N^*(1520) \rightarrow N$  TFFs that relate space-like and time-like regions from the first principles. Based on the space-like data from JLab, we make predictions for TFFs in the time-like region and our predictions can be tested in future experiments (e.g. HADES).
