

Khuri-Treiman analysis of the $J/\psi \rightarrow \pi^+\pi^-\pi^0$ reaction

venerdì 9 giugno 2023 09:25 (25 minuti)

In this talk, recent results from the Joint Physics Analysis Center (JPAC) collaboration will be discussed, mainly based on 2006.01058 and 2304.09736. We will address the decays V to 3π , with V either the omega or the J/ψ meson, in the context of Khuri-Treiman equations. These allow a representation of a three-body decay amplitude that takes into account unitarity (final state interactions) of the three two-body subsystems. In particular, for the decays J/ψ and omega to 3π , elastic di-pion unitarity will be incorporated.
