

Measurements of the Pauli's Exclusion Principle violation with X-Rays detectors: the VIP group

21 June 2023
Alessio Porcelli

High Precision X-Ray Measurements 2023

Why Fermi-Dirac and Bose-Einstein are distinct?

Why Fermi-Dirac and Bose-Einstein are distinct?

WE DON'T KNOW

Beyond Standard Model...

Reasons of Pauli's Exclusion Principle (PEP)

- ◆ **Particle nature? Green's general quantum field:** paronic particles
 - ◆ Order 1: fermionic/bosonic fields
 - ◆ Order >1 : parafermionic/parabosonic fields
 - ◆ **Messiah-Greenberg Super-Selection:** no fermion/boson decays into parafermion/paraboson (and vice-versa)
 - ◆ **Paronic:** a mixture of fermionic/bosonic and parafermionic/parabosonic states

Beyond Standard Model...

Reasons of Pauli's Exclusion Principle (PEP)

- ◆ **Particle nature? Green's general quantum field:** paronic particles
 - ◆ Order 1: fermionic/bosonic fields
 - ◆ Order > 1: parafermionic/parabosonic fields
 - ◆ **Messiah-Greenberg Super-Selection:** no fermion/boson decays into parafermion/paraboson (and vice-versa)
 - ◆ **Paronic:** a mixture of fermionic/bosonic and parafermionic/parabosonic states
- ◆ **Interactions result? Non-Commutative Quantum Gravity**
 - ◆ **θ -Poincaré:** distortion of Lorentz symmetry (visible in a two identical particles system)

$$|\alpha, \alpha\rangle = \langle a^\dagger, \alpha \rangle \langle a^\dagger, \alpha \rangle |0\rangle = \int \frac{d^d p_1}{2p_{10}} \frac{d^d p_2}{2p_{20}} e^{-\frac{i}{2} p_{1\mu} \theta^{\mu\nu} p_{2\nu}} \alpha(p_1) c^\dagger(p_1) \alpha(p_2) c^\dagger(p_2)$$

Beyond Standard Model...

Reasons of Pauli's Exclusion Principle (PEP)

◆ **Particle nature? Green's general quantum field:** paronic particles

◆ Order 1: fermionic/bosonic fields

◆ Order > 1: parafermionic/parabosonic fields

◆ **Messiah-Greenberg Super-Selection:** no fermion/boson decays into parafermion/paraboson (and vice-versa)

◆ **Paronic:** a mixture of fermionic/bosonic and parafermionic/parabosonic states

◆ **Interactions result? Non-Commutative Quantum Gravity**

◆ **θ -Poincaré:** distortion of Lorentz symmetry (visible in a two identical particles system)

$$|\alpha, \alpha\rangle = \langle a^\dagger, \alpha \rangle \langle a^\dagger, \alpha \rangle |0\rangle = \int \frac{d^d p_1}{2p_{10}} \frac{d^d p_2}{2p_{20}} e^{-\frac{i}{2} K_{1\mu} \theta^{\mu\nu} p_{2\nu}} \alpha(p_1) c^\dagger(p_1) \alpha(p_2) c^\dagger(p_2)$$

Beyond Standard Model...

Reasons of Pauli's Exclusion Principle (PEP)

- ◆ **Particle nature? Green's general quantum field:** paronic particles
 - ◆ Order 1: fermionic/bosonic fields

$$\theta_{\mu\nu} = \begin{pmatrix} \theta_{00} & \theta_{0i} \\ \theta_{j0} & \theta_{ji} \end{pmatrix}$$

Space distortion

Beyond Standard Model...

Reasons of Pauli's Exclusion Principle (PEP)

- ◆ **Particle nature? Green's general quantum field:** paronic particles
 - ◆ Order 1: fermionic/bosonic fields
 - ◆ Order > 1: parafermionic/parabosonic fields
 - ◆ **Messiah-Greenberg Super-Selection:** no fermion/boson decays into parafermion/paraboson (and vice-versa)
 - ◆ **Paronic:** a mixture of fermionic/bosonic and parafermionic/parabosonic states
- ◆ **Interactions result? Non-Commutative Quantum Gravity**
 - ◆ **θ -Poincaré:** distortion of Lorentz symmetry (visible in a two identical particles system)

$$|\alpha, \alpha\rangle = \langle a^\dagger, \alpha \rangle \langle a^\dagger, \alpha \rangle |0\rangle = \int \frac{d^d p_1}{2p_{10}} \frac{d^d p_2}{2p_{20}} e^{-\frac{i}{2} K_{\mu\nu} \theta^{\mu\nu} p_{\nu}} \alpha(p_1) c^\dagger(p_1) \alpha(p_2) c^\dagger(p_2)$$

$$\theta_{\mu\nu} = \begin{array}{|c|c|} \hline \text{Time} & \\ \hline \theta_{00} & \theta_{0i} \\ \hline \theta_{j0} & \theta_{ji} \\ \hline \end{array}$$

Space-Time mix distortion
($\theta_{j0} = \theta_{0i}$)

Space distortion

Beyond Standard Model...

Reasons of Pauli's Exclusion Principle (PEP)

- ◆ **Particle nature? Green's general quantum field:** paronic particles
 - ◆ Order 1: fermionic/bosonic fields
 - ◆ Order > 1: parafermionic/parabosonic fields
 - ◆ **Messiah-Greenberg Super-Selection:** no fermion/boson decays into parafermion/paraboson (and vice-versa)
 - ◆ **Paronic:** a mixture of fermionic/bosonic and parafermionic/parabosonic states
- ◆ **Interactions result? Non-Commutative Quantum Gravity**
 - ◆ **θ -Poincaré:** distortion of Lorentz symmetry (visible in a two identical particles system)

$$|\alpha, \alpha\rangle = \langle a^\dagger, \alpha \rangle \langle a^\dagger, \alpha \rangle |0\rangle = \int \frac{d^d p_1}{2p_{10}} \frac{d^d p_2}{2p_{20}} e^{-\frac{i}{2} K_{\mu\nu} \theta^{\mu\nu} p_{\nu}} \alpha(p_1) c^\dagger(p_1) \alpha(p_2) c^\dagger(p_2)$$

$\theta_{\mu\nu} =$	θ_{00}	θ_{0i}	<p style="color: orange;">Space-Time mix distortion ($\theta_{j0} = \theta_{0i}$)</p> <p style="color: green;">Space distortion</p>
	θ_{j0}	θ_{ji}	

Magnetic Scenario: $\theta_{0i} = 0$
only space-sector distortions

Electric Scenario: $\theta_{0i} \neq 0$
also space-time mixing

Signature

Anti-/symmetric commutativity with a coefficient β

$$a^\dagger |0\rangle = |1\rangle \quad a^\dagger |1\rangle = \beta |2\rangle \quad a^\dagger |2\rangle = 0$$

$$a |0\rangle = 0 \quad a |1\rangle = |0\rangle \quad a |2\rangle = \beta |1\rangle$$

In a system of two fermions (i.e., two electrons),
PEP is violated with an amplitude probability of $\beta^2/2$

Signature

Anti-/symmetric commutativity with a coefficient β

$$a^\dagger |0\rangle = |1\rangle \quad a^\dagger |1\rangle = \beta |2\rangle \quad a^\dagger |2\rangle = 0$$

$$a |0\rangle = 0 \quad a |1\rangle = |0\rangle \quad a |2\rangle = \beta |1\rangle$$

In a system of two fermions (i.e., two electrons),
PEP is violated with an amplitude probability of $\beta^2/2$

Signature

Anti-/symmetric commutativity with a coefficient β

$$a^\dagger |0\rangle = |1\rangle \quad a^\dagger |1\rangle = \beta |2\rangle \quad a^\dagger |2\rangle = 0$$

$$a |0\rangle = 0 \quad a |1\rangle = |0\rangle \quad a |2\rangle = \beta |1\rangle$$

In a system of two fermions (i.e., two electrons),
PEP is violated with an amplitude probability of $\beta^2/2$

...but for NCQC and Quon algebra connection we use $\delta^2 = \beta^2/2$ instead:

$$a_i a_j^\dagger - q(E) a_j^\dagger a_i = \delta_{ij}$$

$$\text{with } q(E) = 2\delta(E)^2 - 1$$

Signature

Anti-/symmetric commutativity with a coefficient β

$$a^\dagger |0\rangle = |1\rangle \quad a^\dagger |1\rangle = \beta |2\rangle \quad a^\dagger |2\rangle = 0$$

$$a |0\rangle = 0 \quad a |1\rangle = |0\rangle \quad a |2\rangle = \beta |1\rangle$$

In a system of two fermions (i.e., two electrons),
PEP is violated with an amplitude probability of $\beta^2/2$

...but for NCQC and Quon algebra connection we use $\delta^2 = \beta^2/2$ instead:

$$a_i a_j^\dagger - q(E) a_j^\dagger a_i = \delta_{ij}$$

$$\text{with } q(E) = 2\delta(E)^2 - 1$$

Signature

$$a^\dagger |0\rangle = |1\rangle \quad a^\dagger |1\rangle = \beta |2\rangle \quad a^\dagger |2\rangle = 0$$

$$a |0\rangle = 0 \quad a |1\rangle = |0\rangle \quad a |2\rangle = \beta |1\rangle$$

In a system of two fermions (i.e., two electrons),
PEP is violated with an amplitude probability of $\beta^2/2$

...but for NCQC and Quon algebra connection we use $\delta^2 = \beta^2/2$ instead:

$$a_i a_j^\dagger - q(E) a_j^\dagger a_i = \delta_{ij}$$

$$\text{with } q(E) = 2\delta(E)^2 - 1$$

$$\delta^2 \propto \frac{1}{\Lambda^2}$$

(different for the two θ_{0i} scenarios)

Signature

Anti-/symmetric commutativity with a coefficient β

$$a^\dagger |0\rangle = |1\rangle \quad a^\dagger |1\rangle = \beta |2\rangle \quad a^\dagger |2\rangle = 0$$

$$a |0\rangle = 0 \quad a |1\rangle = |0\rangle \quad a |2\rangle = \beta |1\rangle$$

In a system of two fermions (i.e., two electrons),
PEP is violated with an amplitude probability of $\beta^2/2$

...but for NCQC and Quon algebra connection we use $\delta^2 = \beta^2/2$ instead:

$$a_i a_j^\dagger - q(E) a_j^\dagger a_i = \delta_{ij}$$

$$\text{with } q(E) = 2\delta(E)^2 - 1$$

$$\delta^2 \propto \frac{1}{\Lambda^2}$$

 **distortion Energy Scale**
(different for the two θ_{0i} scenarios)

How about so far?

- ◆ **Ramberg and Snow (1988):** $\beta^2/2 \lesssim 10^{-26}$
- ◆ **DAMA (2009):** $\beta^2/2 \lesssim 10^{-47}$
- ◆ **Borexino (2011):** $\beta^2/2 \lesssim 10^{-60}$

Models scenarios implications

Democratic scenario

all type of particles have the same degree of violation β

How about so far?

- ◆ **Ramberg and Snow (1988):** $\beta^2/2 \lesssim 10^{-26}$, lepton–lepton case
- ◆ **DAMA (2009):** $\beta^2/2 \lesssim 10^{-47}$, hadron–lepton case
- ◆ **Borexino (2011):** $\beta^2/2 \lesssim 10^{-60}$, hadron–hadron case

Models scenarios implications

Democratic scenario

all type of particles have the same degree of violation β

Despotic scenario

each type of particle has its degree of violation β_i

How about so far?

L-shell electron
fills vacancy

K_{α} x-ray emitted

Shells
(orbits)

SDDs

- ◆ Based on sideward depletion
- ◆ Charge particle or photon hits the silicon wafer
 - ◆ electron-hole pairs are generated
 - ◆ free electrons move to the anode following the lower potential due to the concentric electrodes
- ◆ The amount of charge collected by the anode is proportional to the energy of the radiation (X-Rays range)

Outlook

Beyond Standard Models can be tested with X-Rays through the Pauli's Exclusion Principle Violation (PEPV)

Open system:

- ◆ VIP (past), **VIP-2 (current)**, and VIP-3 and GATOR (future)
 - ▶ **Rigorous Data Analysis** (Bayesian inference)
 - ▶ Need for better **Electron-atoms interaction modeling** (N_{int})

Close system:

- ◆ BEGE, **VIP-Lead**
 - ▶ Effective theories of Quantum Gravity (**NCQG**) predicting PEPV
 - ▶ **Exclusion of the Electric Scenario** and strong **constraint over the Magnetic Scenario**
