

His research field mainly was the Experimental Nuclear Physics, and especially the study of heavy ions reactions with stable and unstable beams.

His activity started in France (CEA, Saclay and GANIL, Caen) and then he became INFN- Sezione di Catania came back in Italy.

He carried out his experimental activity, mainly at the Laboratori Nazionali del Sud.

He was great expert of detectors and electronics, and he was the creator of **CHIMERA (1993-2000)** detector, that is operational at LNS, since 2000 up today.

He established strong and long lasting international collaborations.
