ANNUAL SOURCE VARIABILITY

Federica Guidi
Supervisor: Elena Orlando

Introduction: Fermi-LAT

Fermi is a Gamma Ray Space Telescope spacecraft.

LAT is Fermi's principal scientific instrument, it is an imaging high-energy gamma-ray telescope covering the energy range from about 20 MeV to more than 300 GeV.

The LAT field of view covers about 20% of the sky at any time, and it scans continuously, covering the whole sky every three hours.

Introduction: gamma maps of the sky

Galactic plane

Galactic center

Extragalactic sources

Summary: Analysis

- Fermi-LAT data of seven years (08/2008 – 08/2015)
- Counts normalized with exposure maps of seven year
- Fermi-LAT PSF
- Counts difference and significant variation
- Extraction of the variable sources
- Characteristics of variable sources

Motivation for this analysis

- Study of long term variability, never investigated by Stanford researchers
- Model independent analysis
- Identification of sources in the galactic center to try to have a better knowledge of the background

Fermi-LAT data (08/2014 – 08/2015) Counts Map year 7

Pass 8 Events file

- Energy range [1-500]GeV
- zmax=90deg
- event class=128 (source)
- event type=FRONT +BACK
- bin size of 0.5 deg.

Counts map

Exposure map year 7

Exposure map year 1

1 3 7 15 31 62 125 251 501

Time in Modified Julian Day

- 1: 2008/08/01 – 2009/08/01 = 54679 – 55044 (MJD)
- 2: 2009/08/01 – 2010/08/01 = 55044 – 55409 (MJD)
- 3: 2010/08/01 – 2011/08/01 = 55409 – 55774 (MJD)
- 4: 2011/08/01 – 2012/08/01 = 55774 – 56140 (MJD)
- 5: 2012/08/01 – 2013/08/01 = 56140 – 56505 (MJD)
- 6: 2013/08/01 – 2014/08/01 = 56505 – 56870 (MJD)
- 7: 2014/08/01 – 2015/08/01 = 56870 – 57235 (MJD)

No particular correlation found.
A more precise study must.

Observations and conclusions

- 87 sources with significant annual variation.
- One source is not associated at the 3FGL catalog.
- All the VAR sources are extragalactic (except source 82 which is not associated to a 3FGL source)
- No new class sources found
- No sources in the galaxy found (especially in the galactic center)

Future prospects

- Systematic studies of the light curves of VAR source.
- Association of source VAR 82 with the latest version of Fermi-LAT detected sources.
- Association of source VAR 82 with other catalogs.
