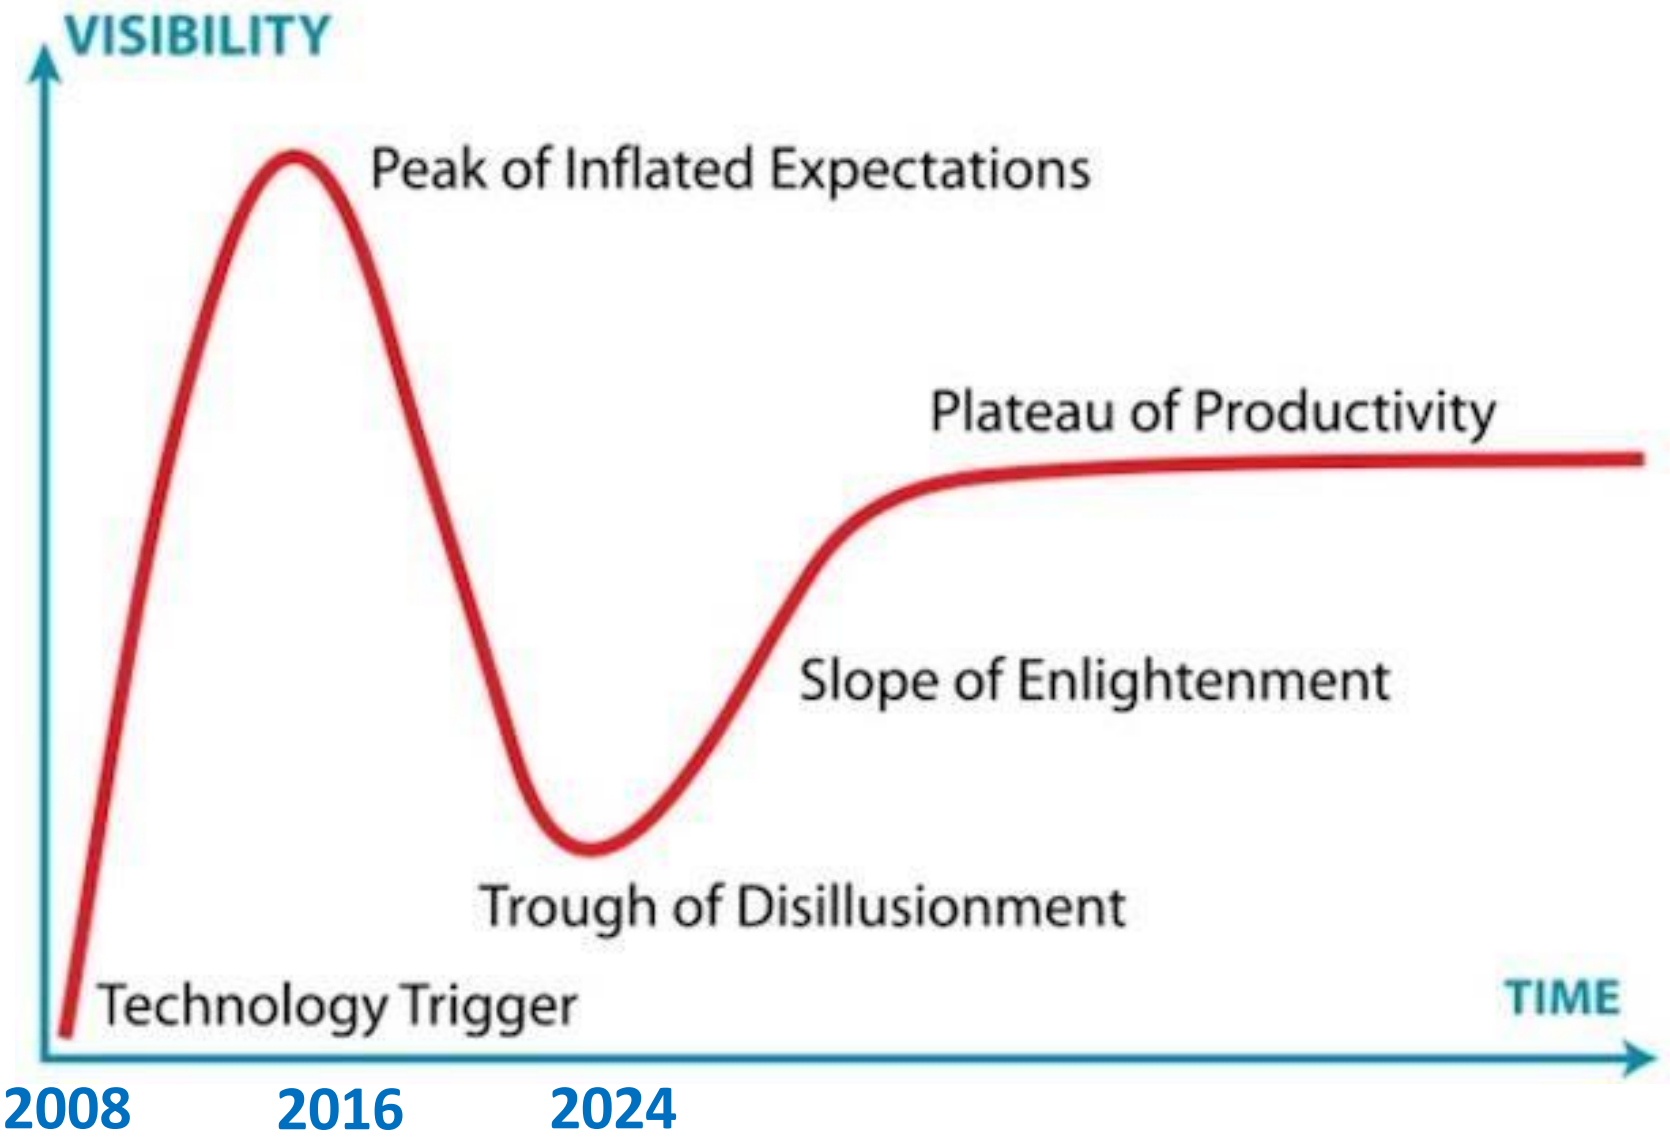
PET/MR: where are we at?



https://it.wikipedia.org/wiki/Hype_cycle

SYNLAB IRCCS SDN

Becker, M., & Garibotto, V. (2023). PET/MR Imaging in Clinical Practice: After Expectations and (Some) Disillusion, a Slope of Enlightenment. *Magnetic Resonance Imaging Clinics*, *31*(4), xv-xvi.

Where do we stand today?

PET/MR special session @ISMRM italian chapter 2024

- Still searching for the killer application
- Technical challenges are almost solved
- PET/MR fostered the virtuous collaboration between NM and MRI communities
- PET/MR is confirming a valuable research tool in Brain Research
- Tool for the study of the relationship of PET and MR imaging markers **(PET is the reference)**
  - SWI/DTI Vs Amyloid-PET
  - GlucoCEST Vs FDG-PET
  - ASLperfusion Vs FDG/earlyAmyloid-PET
- Tool for the study of the relationship among different brain connectivity metrics **(MR is the reference)**

SYNLAB

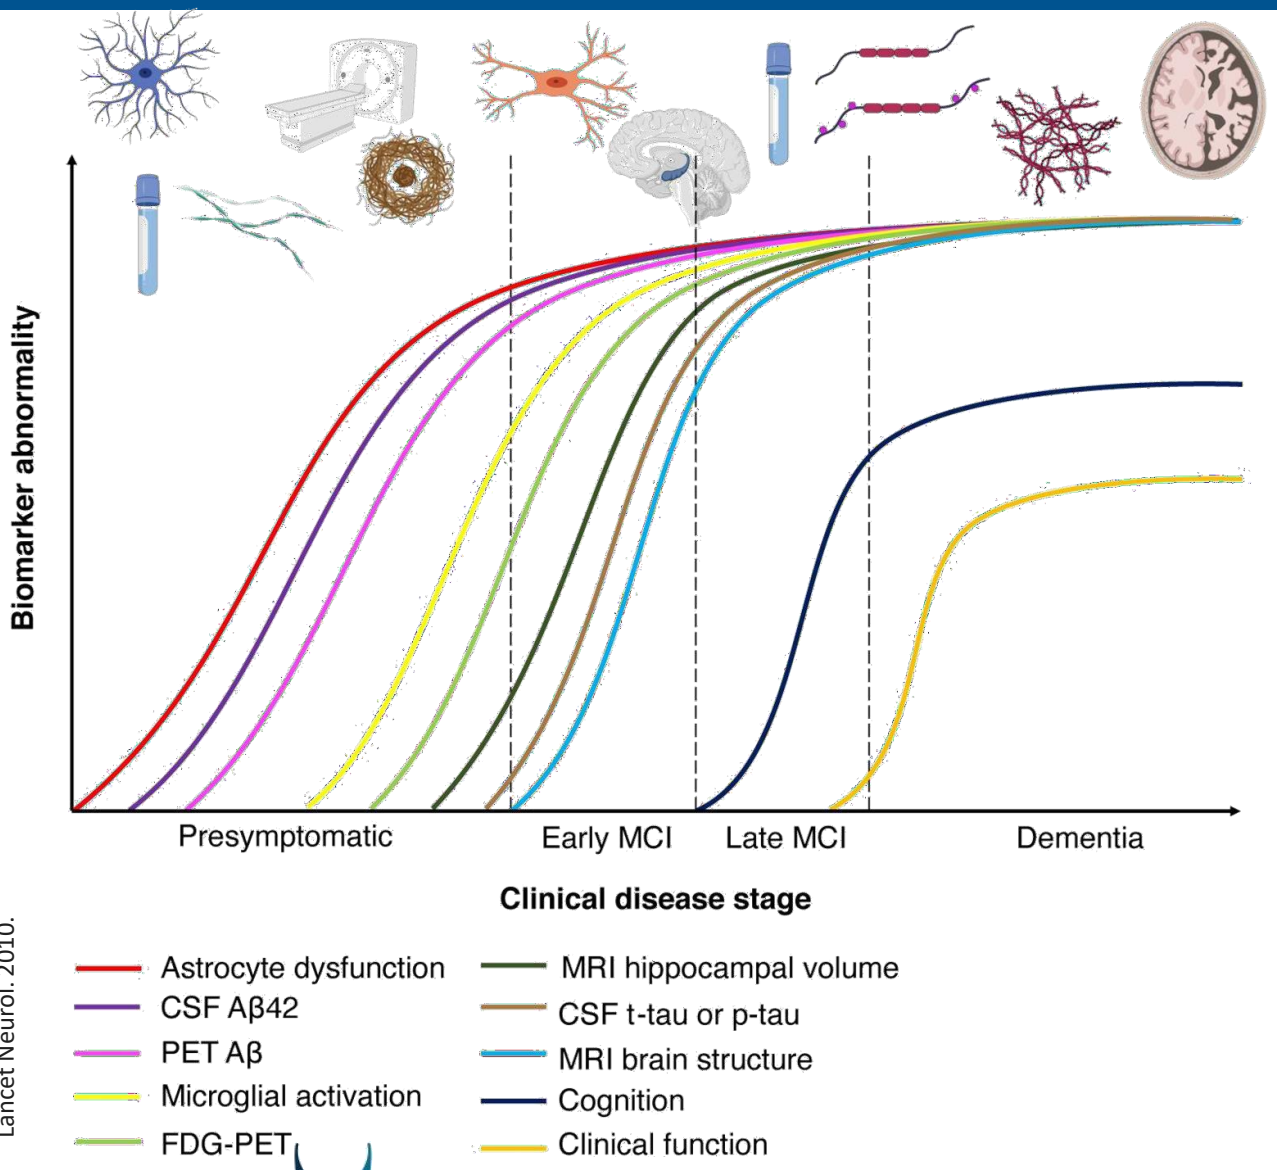
PM-D Background



Jack CR Jr, Knopman DS, Jagust WJ, Shaw LM, Aisen PS, Weiner MW, Petersen RC, Trojanowski JQ. Hypothetical model of dynamic biomarkers of the **Alzheimer's pathological cascade**. Lancet Neurol. 2010.

TABLE 2. KNOWN PATHOLOGIC FACTORS IN ALZHEIMER'S DISEASE AND RELATED BIOMARKERS

Factor	Imaging	CSF	Blood
Amyloid-β load **A**	[^{11}C]-PIB	Amyloid-β (1-42)	APP 699-711
	[^{18}F]-NAV4694		Amyloid-β (1-42)
	[^{18}F]-florbetapir		Amyloid-β (1-40)
	[^{18}F]-florbetaben		
	[^{18}F]-flutemetamol		
Neurofibrillary tangles **T**	[^{18}F]-Ro948	Phosphorylated tau	The association of serum phosphorylated tau with tangles is unclear
	[^{18}F]-AV1451		
	[^{18}F]-MK6240		
	[^{18}F]-PI2620		
	[^{11}C]-PBBB3		
Neurodegeneration **N**	MRI	Total tau	Neurofilament light chain (NFL)
	[^{18}F]-FDG	Neurofilament light chain (NFL)	
		Neurogranin (Ng)	
		Synaptosomal-associated protein 25 (SNAP-25)	
		Neuron-specific enolase (NSE); heart fatty acid binding protein (HFABP)	
Vascular load	MRI	CSF albumin:plasma albumin ratio	α-synuclein
Lewy body load	N/A	α-synuclein	N/A
Neuroinflammation	Microglial activation:	Microglial activation:	Microglial activation:
	[^{11}C]PK11195	Chitinase-3-like protein 1 (YKL-40)	Chitinase-3-like protein 1 (YKL-40)
	[^{11}C]PBR28	Soluble TREM2 (sTREM2)	Cytokines:
	[^{11}C]DAA1106	Cytokines: TNF-α, IL-6, IL-1β	TNF-α, IL-1 β,
	[^{18}F]DPA714	Chemokines:	Chemokines:
	[^{11}C]DPA713	Monocyte chemotactic protein 1 [MCP-1]	Monocyte chemotactic protein 1
	[^{18}F]ER176		
	[^{18}F]GE180		
	[^{11}C]L-des-deprenyl		

- Dementia requires a multi-modal assessment
- Need for reliable and reproducible (binary) markers

SYNLAB IRCCS SDN

What about«promising» MR techniques in AD?

- QSM (>20 studies) Quantification of iron content, Assessment of myelination, Measuring venous oxygen saturation
  "QSM has the ability to provide pathophysiological information on brain tissue properties and the potential to measure the efficacy of novel therapeutics in clinical settings for AD."
  Studied also In correlation with Amyloid-PET

- DTI (>50 studies) Microstructural assessment ***"Diffusion metrics are associated with cognitive outcomes in AD continuum."***
  Studied also In correlation with Amyloid-PET + CONNECTOMICS

- ASL (>50 studies) ***«Disrupted perfusion is not only evident throughout disease manifestation, it is also demonstrated during the pre-clinical phase of AD"*** but ***" lower sensitivity, specificity and inter-rater reliability for ASL compared to FDG-PET"***

- rs-FMRI (>50 studies) ***«Evidence indicates that the nodes of the DMN can offer moderate to high diagnostic power to distinguish AD and MCI patients."***

SYNLAB IRCCS SDN

RISK: MR protocol can dominate PET/MR examination!

PM-D

Integrated PET/MR scanner as reference imaging tool in the study of dementia: technological and clinical assessment (PM-D) GR-2018-12366779

- Enrollment started late 2020, project results must be delivered in september 2024

AIMS

To evaluate the benefits/costs ratio and feasibility of PET/MR, with respect to standalone PET/CT and MR, in management and diagnosis of dementia patients.

- **PET quantified with and without MR information**

To assess the accuracy of PET/MR biomarkers, and related combinations, to find a reliable clinical protocol.

- **Investigating mutual relationship among imaging markers**

To provide suitable PET/MR imaging protocols, image processing pipelines and structured reports for a comprehensive dementia assessment.

- **Assessing accelerated protocols Vs conventional protocols**

SYNLAB
IRCCS SDN

PM-D: Research design

- Observational cross-sectional prospective study design
- Subjects target: 100 subjects within 55-90 age range

  - **T00 IMAGING:** Amyloid-PET/CT+ structural MRI (MR angiography; volumetric MRI; DT; FLAIR; SWI) with PET coregistration on hybrid PET/MR scanner
  - **T01 IMAGING:** FDG-PET/CT + functional MRI (rs-FMRI, ASL, volumetric T1+T2, T2-FLAIR) with PET coregistration on hybrid PET/MR scanner
  - **Neuropsychological assessment** battery to evaluate long- and short-term memory abilities, frontal/executive functions, visuo-spatial and visuo-constructional abilities

  + Blood Sample

  MR Imaging protocols armonized with Italian Neuroscience Network (RIN)

Early Amyloid as proxy of Brain Metabolism

Early-Phase ^{18}F-Florbetapir and ^{18}F-Flutemetamol Images as Proxies of Brain Metabolism in a Memory Clinic Setting

Cecilia Boccalini[1–3], Débora Elisa Peretti[1], Federica Ribaldi[4,5], Max Scheffler[6], Sara Stampacchia[1], Szymon Tomczyk[4], Cristelle Rodriguez[7,8], Marie-Louise Montandon[8,9], Sven Haller[10–13], Panteleimon Giannakopoulos[7,8], Giovanni B. Frisoni[4,5], Daniela Perani[2,3,14], and Valentina Garibotto[1,15,16]

J Nucl Med 2023; 64:266–273
DOI: 10.2967/jnumed.122.264256

tively). **Conclusion:** The distribution of perfusion was comparable to that of metabolism at the single-subject level by parametric analysis, particularly in the presence of a high neurodegeneration burden. Our findings indicate that eFBP and eFMM imaging can replace ^{18}F-FDG PET imaging, as they reveal typical neurodegenerative patterns or allow exclusion of the presence of neurodegeneration. The findings show cost-saving capacities of amyloid PET and support routine use of the modality for individual classification in clinical practice.

This is of particular interest in PET/MR:

We could, in principle, envision a «one shop» protocol that dramatically reduce the acquisition time!

SYNLAB IRCCS SDN

During the project we changed the protocol to include also eFMM

Advantages of PET/MR

Today's issues:

- PET/MR requires one session (and one room)
- MR-driven PET regional quantification works better
- PET/MR examination is shorter than standalone PET + MR

INDIRECT: Can early-amyloid replace FDG-PET in clinical setting?

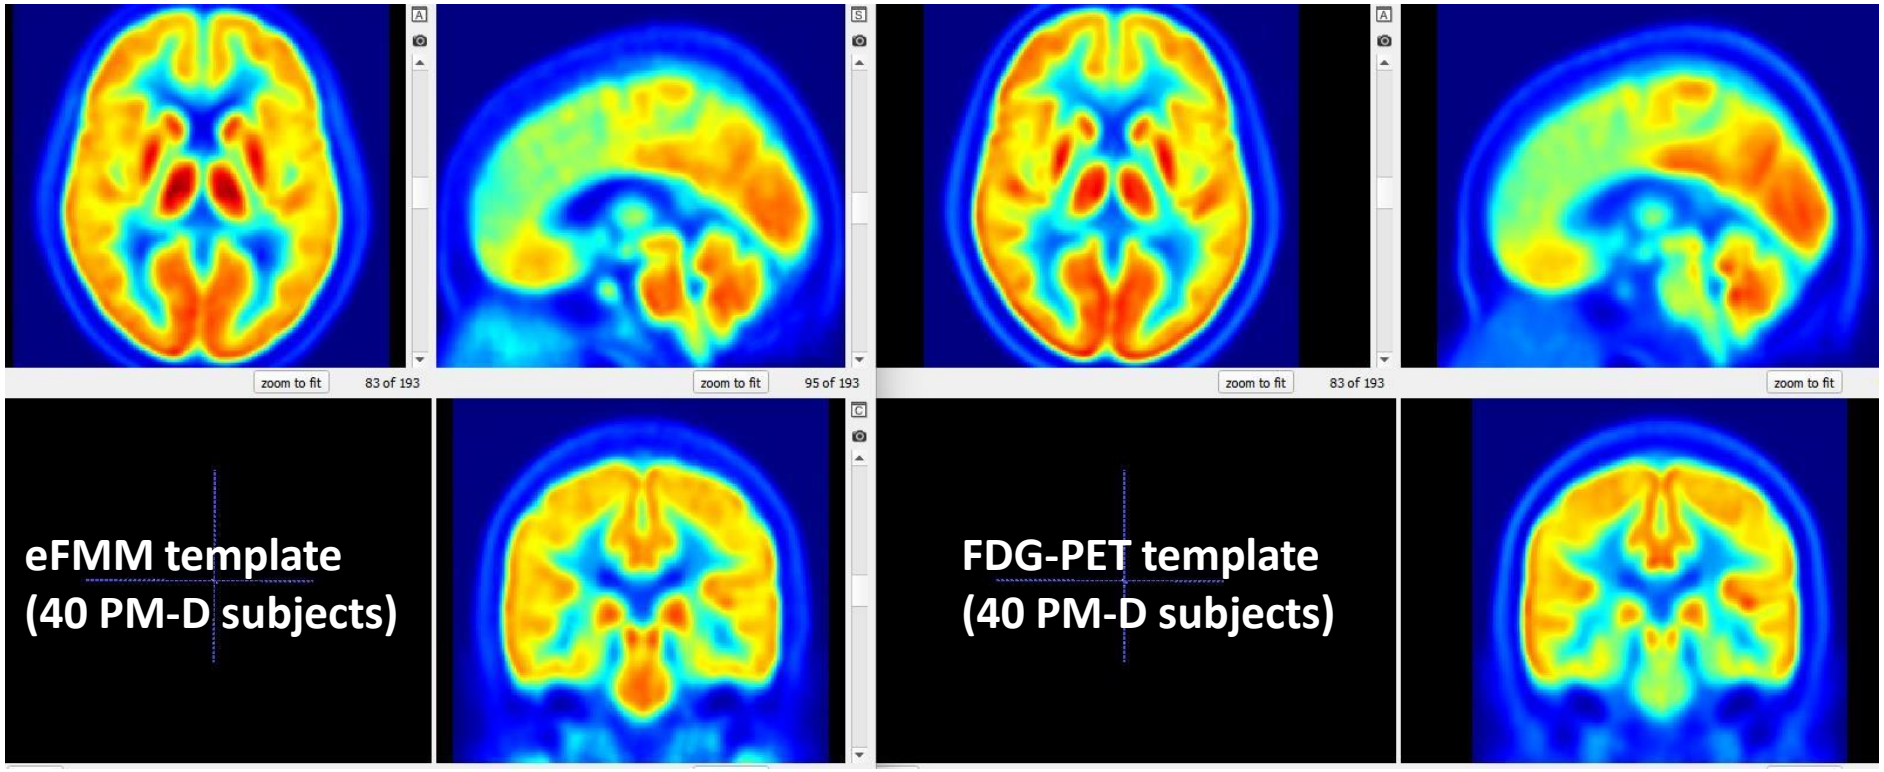
FDG-PET Vs eFMM

Can early-amiloid replace FDG-PET in clinical setting?

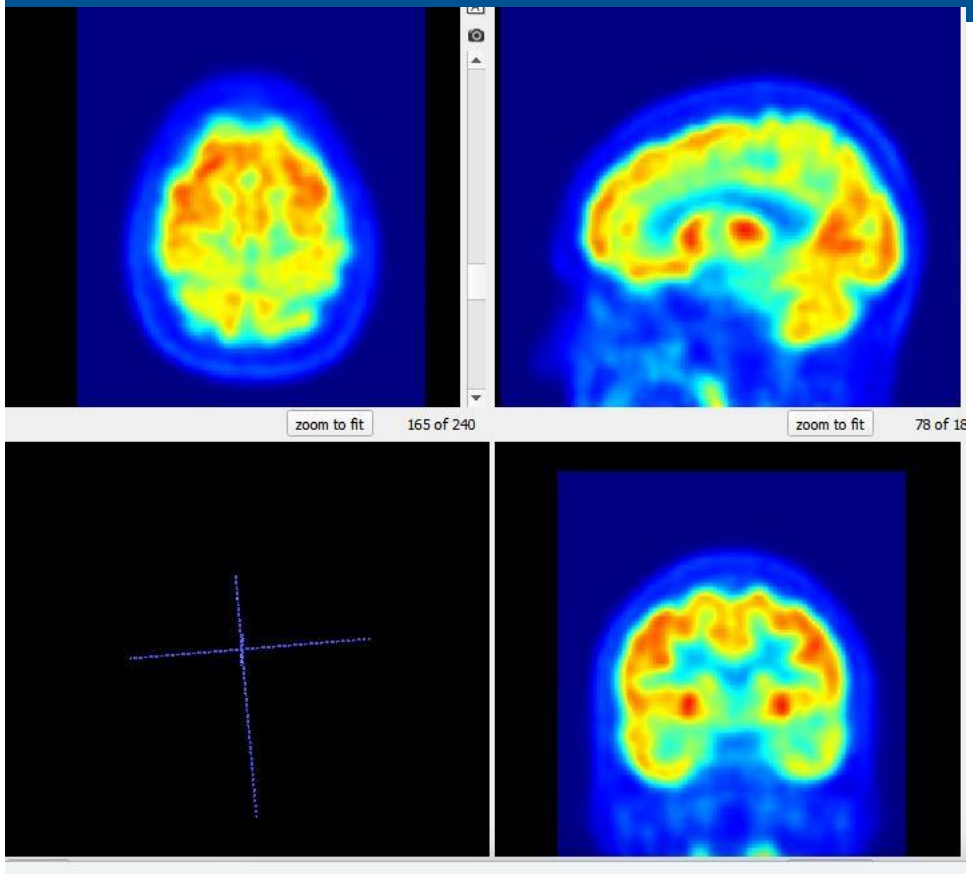


eFMM: early Vizamyl uptake averaged 60'- 480'

SYNLAB IRCCS SDN

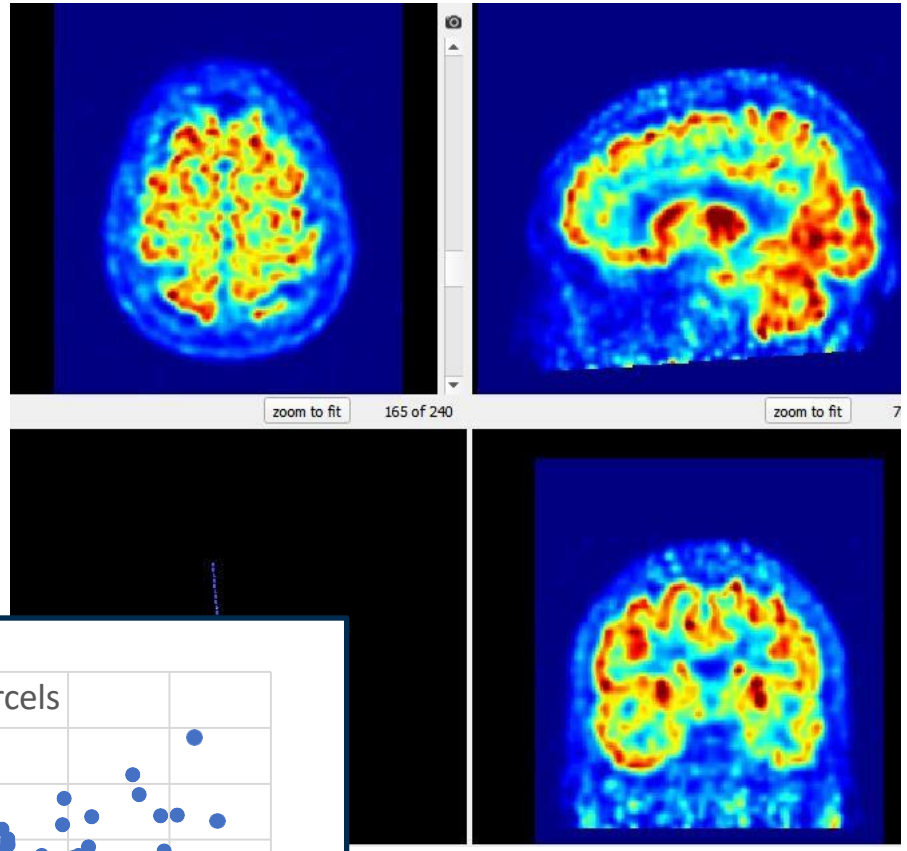
Impressive similarity, major differences in brainstem and thalami

FDG-PET Vs eFMM



FDG-PET

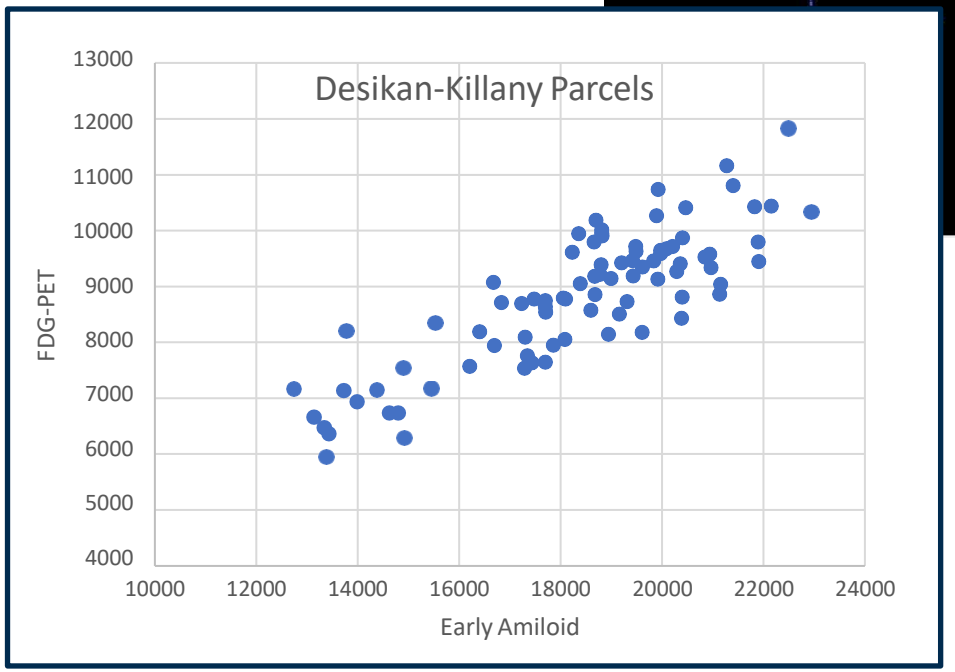
eFMM-PET



60 yo, female

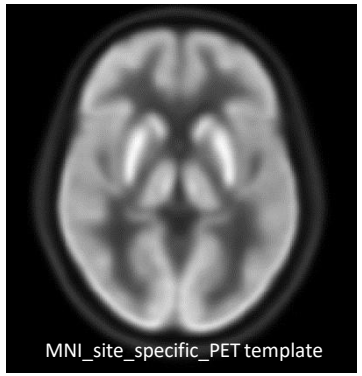
T-P sx and precuneus hypometabolism

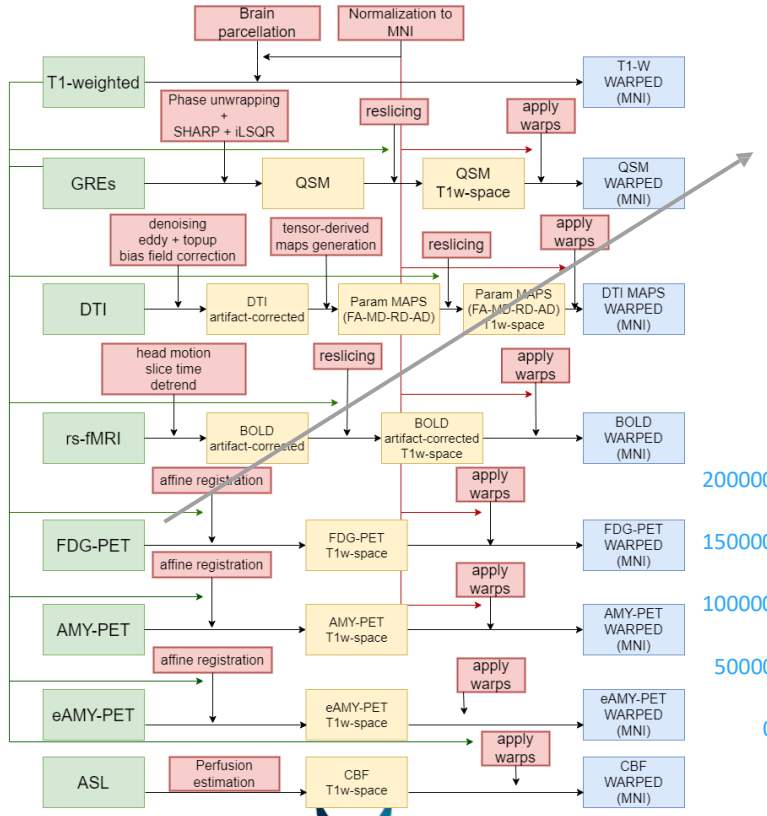
MMSE 28

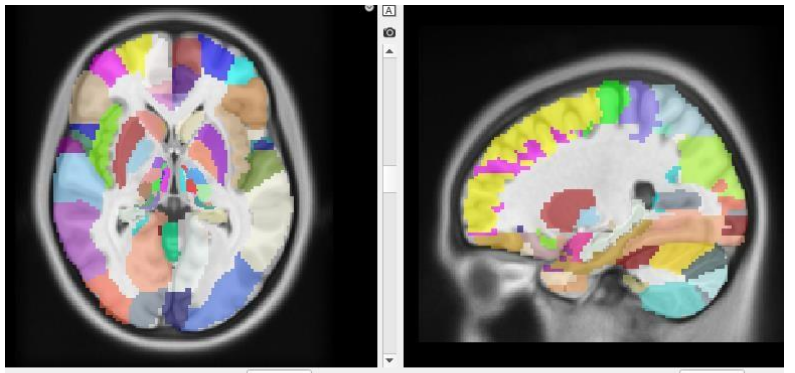


SYNLAB IRCCS SDN

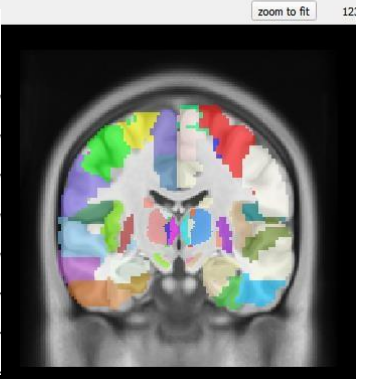
Does MR-driven PET regional quantification work better?





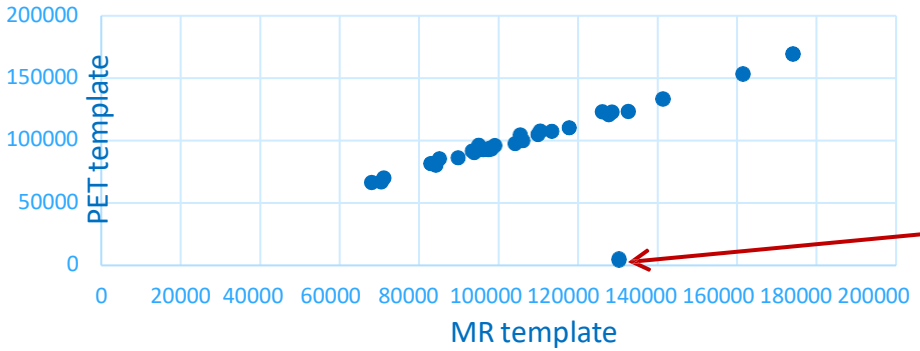


ROI	ROI-weight (%)
Posterior cingulate gyrus	31.238
Fusiform gyrus	15.398
Cuneus	14.148
Medial frontal gyrus	10.524
Globus pallidus	8.848
Angular gyrus	7.499
Sup. parietal lobule	5.693



Rondina et al. Selecting the most relevant brain regions to discriminate Alzheimer's disease patients from healthy controls […]. Neuroimage Clin. 2017

Comparison of PET-driven Vs MRI-driven spatial normalization on AD AAL3 regions (30patients)



Automatic PET normalization failed! 1/30

ANSWER: Not at all, probably MR can be exploited for quantification in native space and PVE estimation

Final remarks

- MR accelerated sequences are reliable for automated softwares (tuned on conventional MR)
- Exploiting early amiloid can deliver comprehensive and clinically feasibile PET/MR protocol for dementia
- Integration with other (bio)markers can play a crucial role for patient's compliace
- A lot of work to do forward:
  - Reprocessing/recovering of PM-D dataset in progress
  - Multivariate statistical framework - evaluation of imaging markers with respect to clinical outcome
  - Role of MR markers to unveil the glucose-perfusion mismatch

TABLE 1. AMYLOID-TAU-NEURODEGENERATION CLASSIFICATIONS FOR ALZHEIMER'S DISEASE	
NIA-AA Research Framework	
Amyloid (A)	Cerebrospinal fluid Aβ42, or Aβ42/Aβ40 ratio
	Amyloid-positron emission tomography
Tau (T)	Cerebrospinal fluid phosphorylated-tau
	Tau positron emission tomography
Neuro-degener-ation (N)	Anatomic MRI
	Fluorodeoxyglucose-positron emission tomography
	Cerebrospinal fluid total tau
Clinical Linkages for Individuals With Symptoms	
$A^+T^+N^-$	Prodromal Alzheimher's disease/mild cognitive impairment due to Alzheimer's disease
$A^+T^+N^+$	Alzheimer's disease dementia (can still be mixed dementia)
$A^-T^+N^-$	Cerebrovascular disease, prion disease, early tauopathies
$A^-T^+N^+$	Vascular dementia, tauopathies, dementia with Lewy bodies, primary age-related tauopathy
$A^-T^-N^+$	Limbic-predominant age-related TDP-43 encepha-lopathy

Biomarker category	fluid	imaging
Core Biomarkers		
A (Ab proteinopathy)	Ab42/40	Amyloid PET
T (AD tau proteinopathy)	ptau 181, 217	Tau PET
Non - specific biomarkers of tissue reaction involved in AD pathophysiology		
N (injury, dysfunction, or degeneration of neuropil)	NfL	Anatomic MR, FDG PET
I (inflammation) Astrocytic activation	GFAP	
Biomarkers of non-AD co-pathology		
V vascular brain injury		Anatomic infarction, WMH, abundant dilated perivascular spaces
S α-synuclein	αSyn-SAA*

Backup slide 8: Killer Application?

PSMR 2012

Scientific Programme

Keynote Speaker

Bernd Pichler, Germany, *The search for the killer application in PET-MR*

"killer applications" – i.e., applications where PET/MRI would yield a significant clinical benefit, in comparison with the most widely established hybrid imaging technique, PET/CT (PET/computed tomography), or in comparison with MRI – has been a major topic of discussion in the radiology and nuclear medicine communities alike.
