Hands-on session information

In preparation for the hands-on session:

1) **have a working environment** that can operate **jupyter notebooks** and make use of the following python packages: numpy, pandas, sympy, matplotlib

One way to do it is to install conda or miniconda and prepare an environment there.

2) **have a working version of github**, where you should search for and download the following repository:

hbprosper/INFN-SOS

You can find it immediately e.g. by using the search bar from github.

3) Have a **recent version of the ROOT that can operate under python (PyROOT)**. You can install it in several ways, documented here:

<https://root.cern/install/>

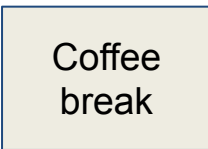

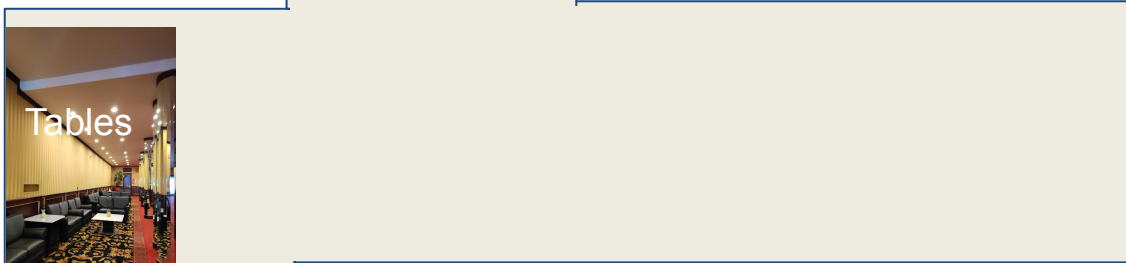

One of the possibilities is to use a package manager, like conda that you could have used in the previous steps.

4) **Stay tuned for more information to be shared during the courses / updated via mail!**

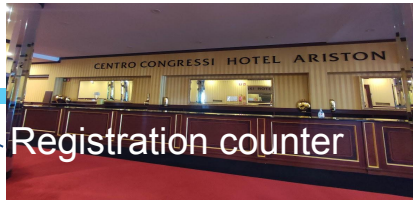

Contact and information

We are here!

Entrance coming from the rooms

Enjoy the school!
