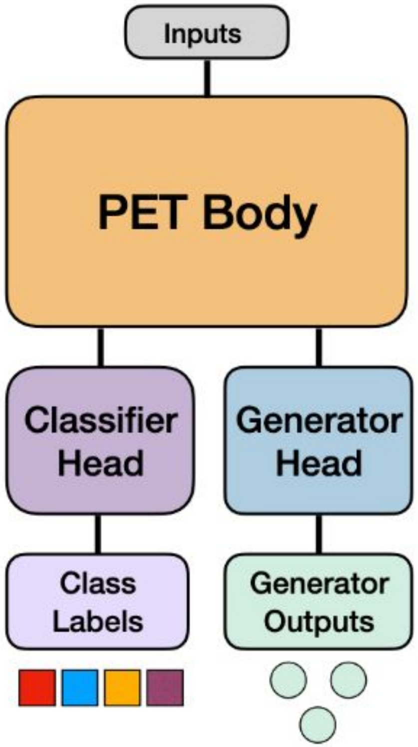
Introduction

BERKELEY LAB

How to teach AI about jets?

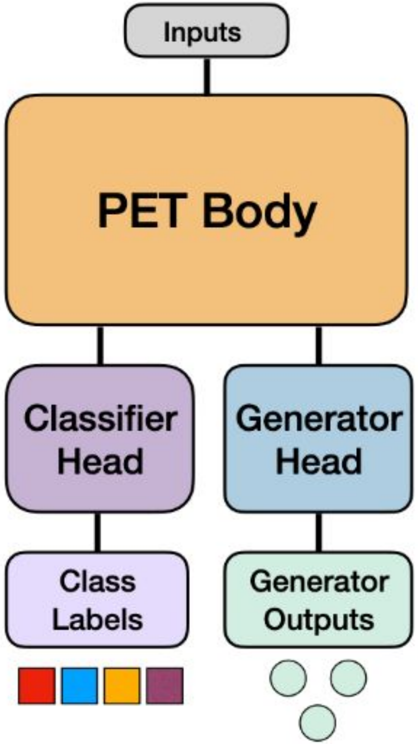
Introduction



Create a neural network model that aims to accomplish 2 tasks:

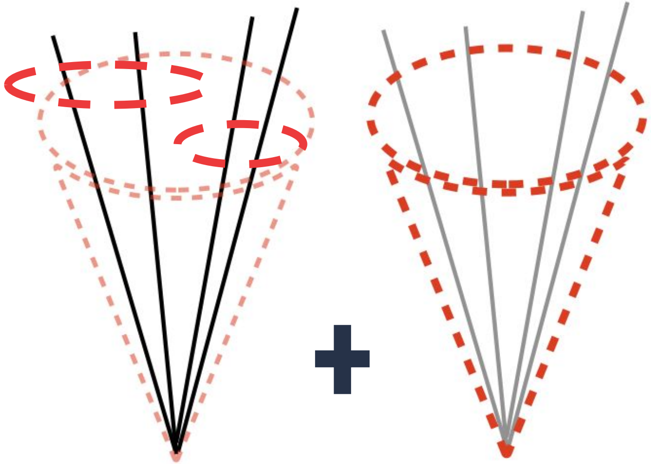
- **Classify jets**: learns the difference in radiation between jet types
- **Generate jets**: implicitly learn the likelihood of jets for different partons

Encoding jet information



Point-**E**dge **T**ransformer (**PET**)

- Combine local information with graphs
- Learn global information with Transformers



Training

JetClass dataset used for training

- 100M jets
- **10 different jet categories, AK8 jets simulated in pp collisions with Madgraph + Pythia8 with CMS Delphes detector simulation**

Use the pre-trained model as the starting point and fine-tune using different datasets

Evaluation

BERKELEY LAB

Evaluation datasets: **1**

2 different jet categories, AK8 jets simulated in pp collisions with ~~Madgraph +~~ Pythia8 with ATLAS Delphes detector simulation

	Acc	AUC	$1/\epsilon_B$ $\epsilon_S = 0.5$	$1/\epsilon_B$ $\epsilon_S = 0.3$

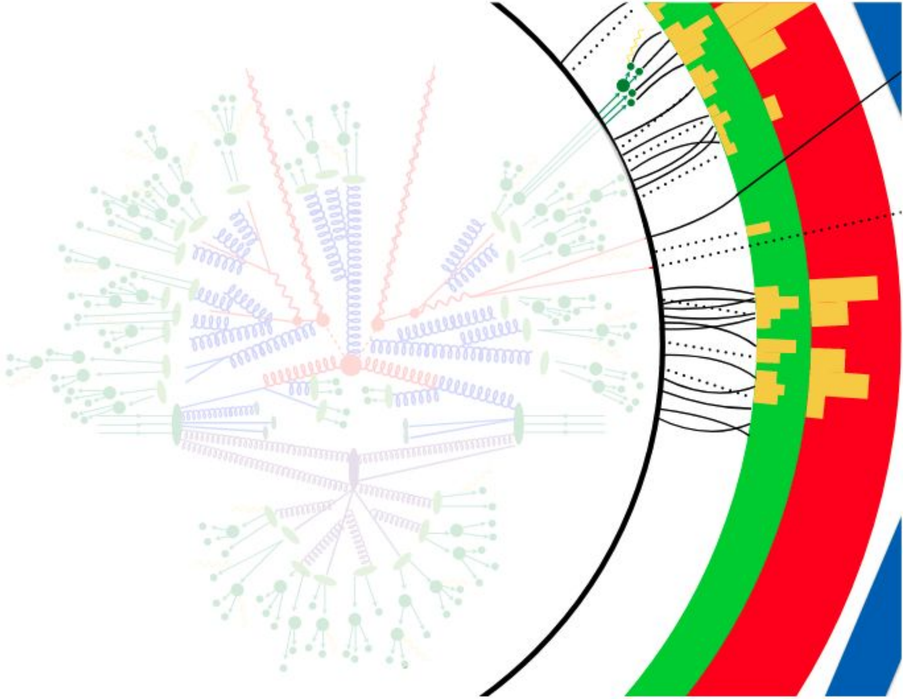
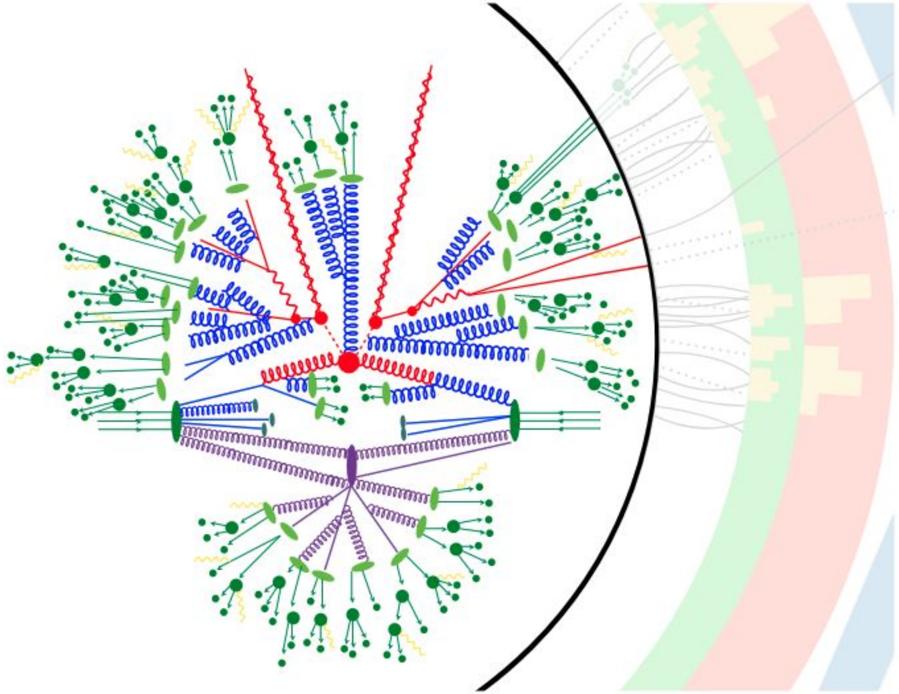
Unfolding

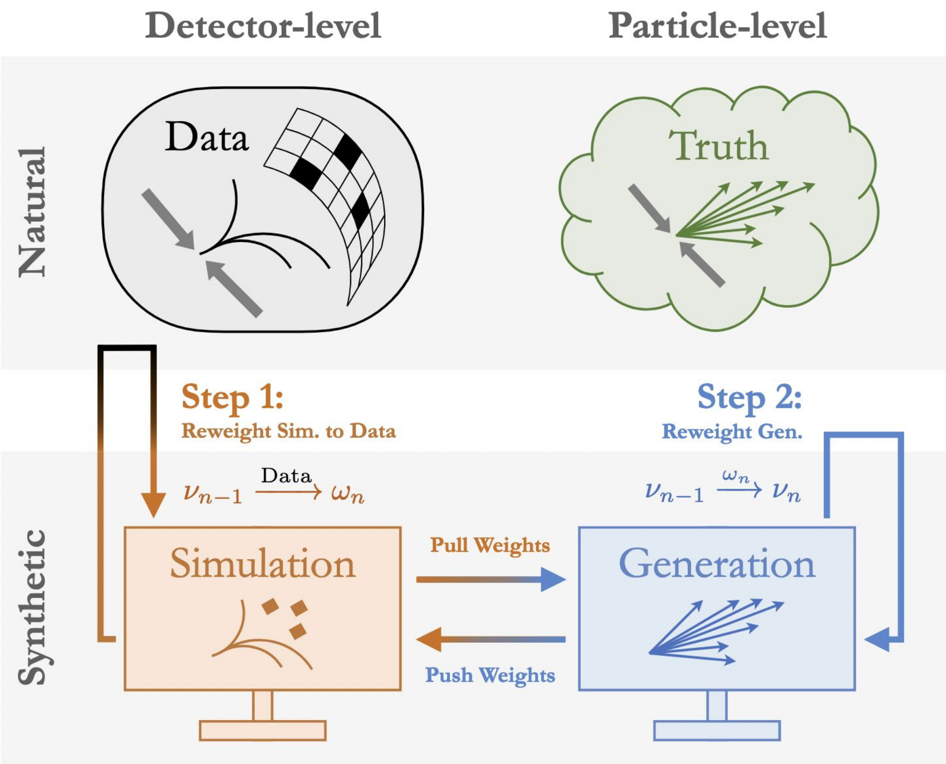
What we measure



What we want



OmniFold



2-step iterative process

- **Step 1**: Reweight simulations to look like data
- **Step 2**: Convert learned weights into functions of particle level objects

Source: Andreassen et al. PRL 124, 182001 (2020)

Unfolding

Evaluation datasets: **8**

Unbinned Unfolding using the OmniFold workflow. More **precise** than traditional unfolding and more **efficient** than previous ML models

Metric	MultiFold	UniFold	IBU	OmniFold

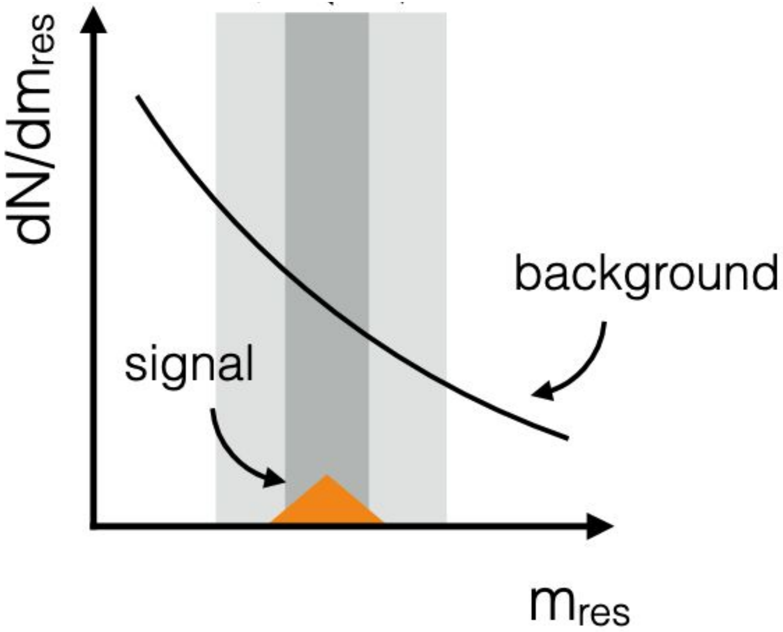
BERKELEY LAB

Evaluation datasets: **9**

Bump-hunting using ML:

- Use the background in the sideband to estimate the background in the signal region
- Compare the estimated background with the data

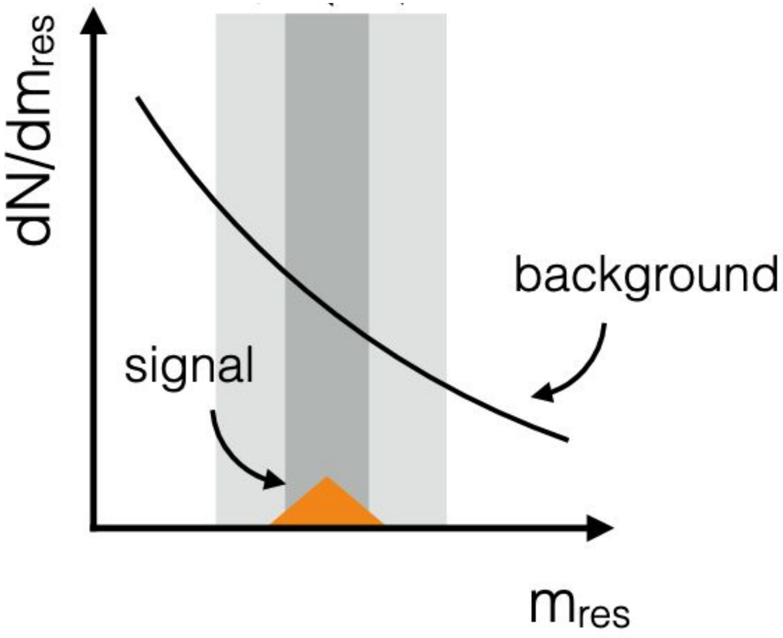


BERKELEY LAB

Evaluation datasets: **9**

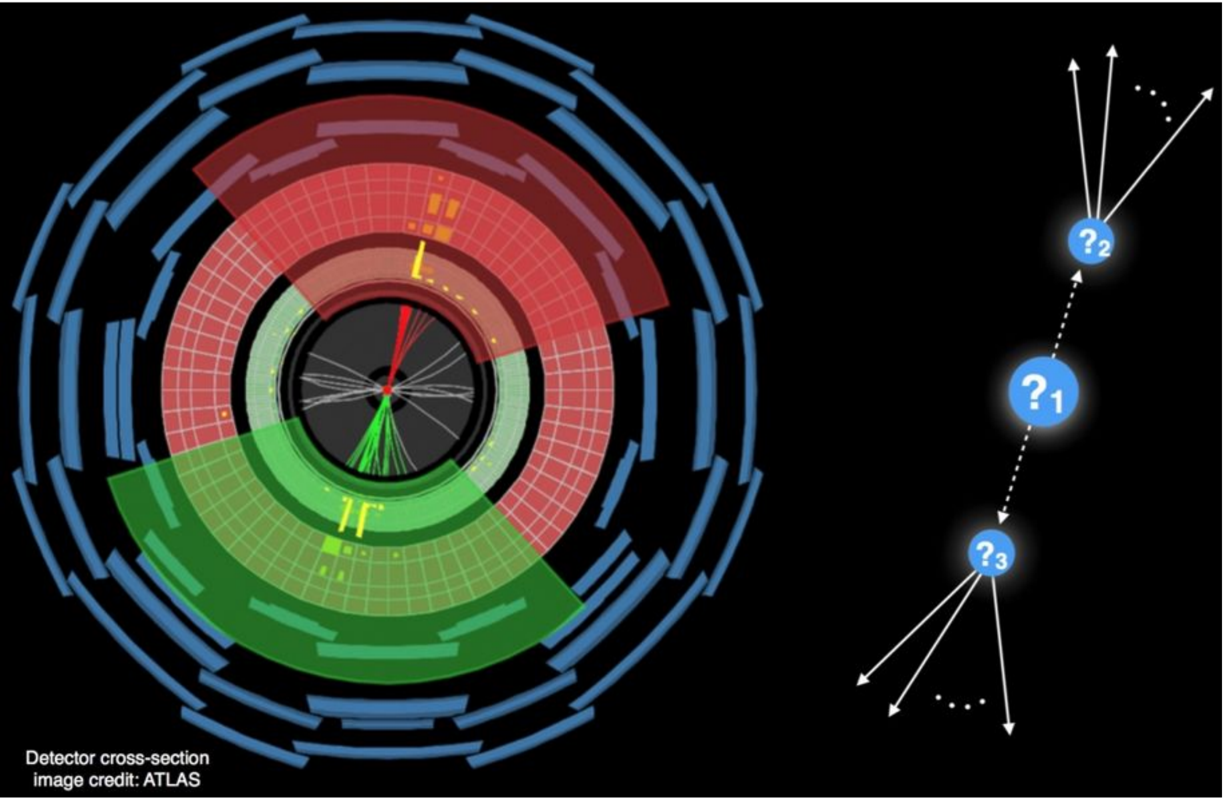
Bump-hunting using ML:

- **Generative Model**
- **Classifier**



LHCO dataset

Evaluation datasets: **9**

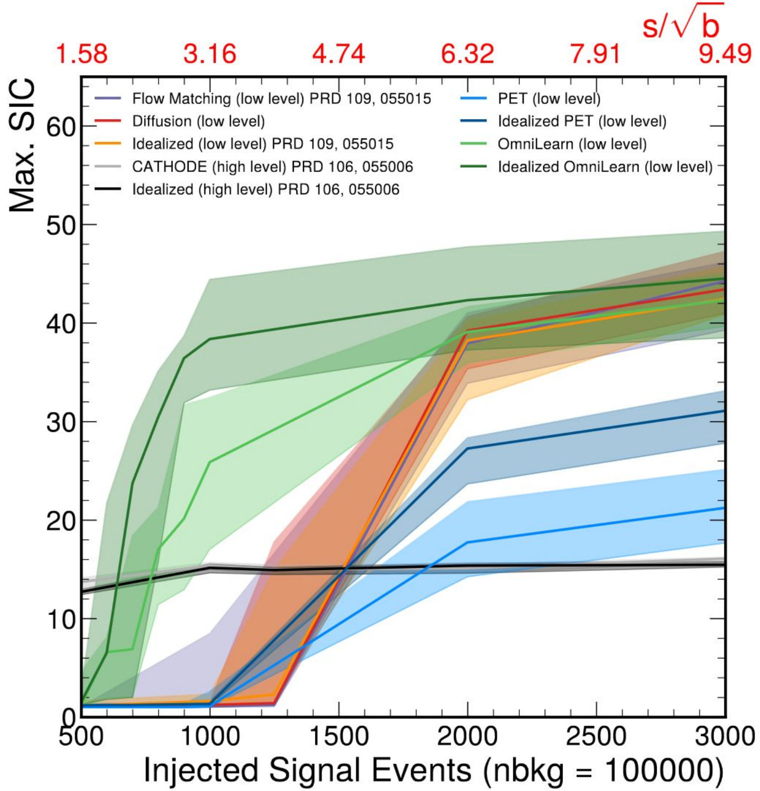


LHCO R&D dataset

- Resonant **dijet** final state: A->B(qq)C(qq) with m_A, m_B , m_C = 3.5, 0.5, 0.1 TeV

Anomaly Detection

Evaluation datasets: **9**

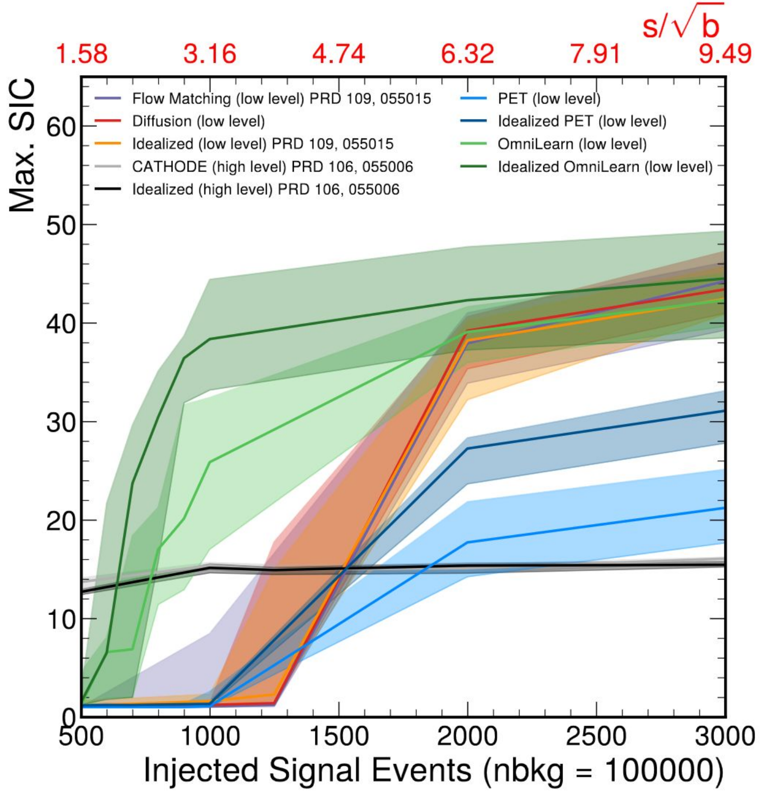


- **Generate** the full dijet system: 2*279*3 = **1674** numbers to generate
- **Classify** data from background

SIC = Significance Improvement Curve (TPR/sqrt(FPR) vs TPR) “By how much can I improve the significance of a particular signal given an initial significance.”

Anomaly Detection

Evaluation datasets: **9**



- **Generate** the full dijet system: 2*279*3 = **1674** numbers to generate
- **Classify** data from background

Previous results were limited by the amount of data in the SR: Only sensitive to NP when **S/B > 3% ~ 4σ**

OmniLearn founds the NP with **S/B = 0.7% ~ 2σ**

Conclusion

- **OmniLearn**: learn a general representation of jets
- Evaluate the generalization capabilities of OmniLearn across **9 different downstream datasets**
- Evaluate the performance on **jet tagging**, **jet generation**, **unfolding**, and **anomaly detection**
- OmniLearn either improves upon SOTA or/and converges quicker than models trained from scratch
- Magnify the statistical power of the data: **Not only Big Data benefits from AI**
- **Try it out yourself**: https://github.com/ViniciusMikuni/OmniLearn/ and check out the paper: arXiv:2404.16091

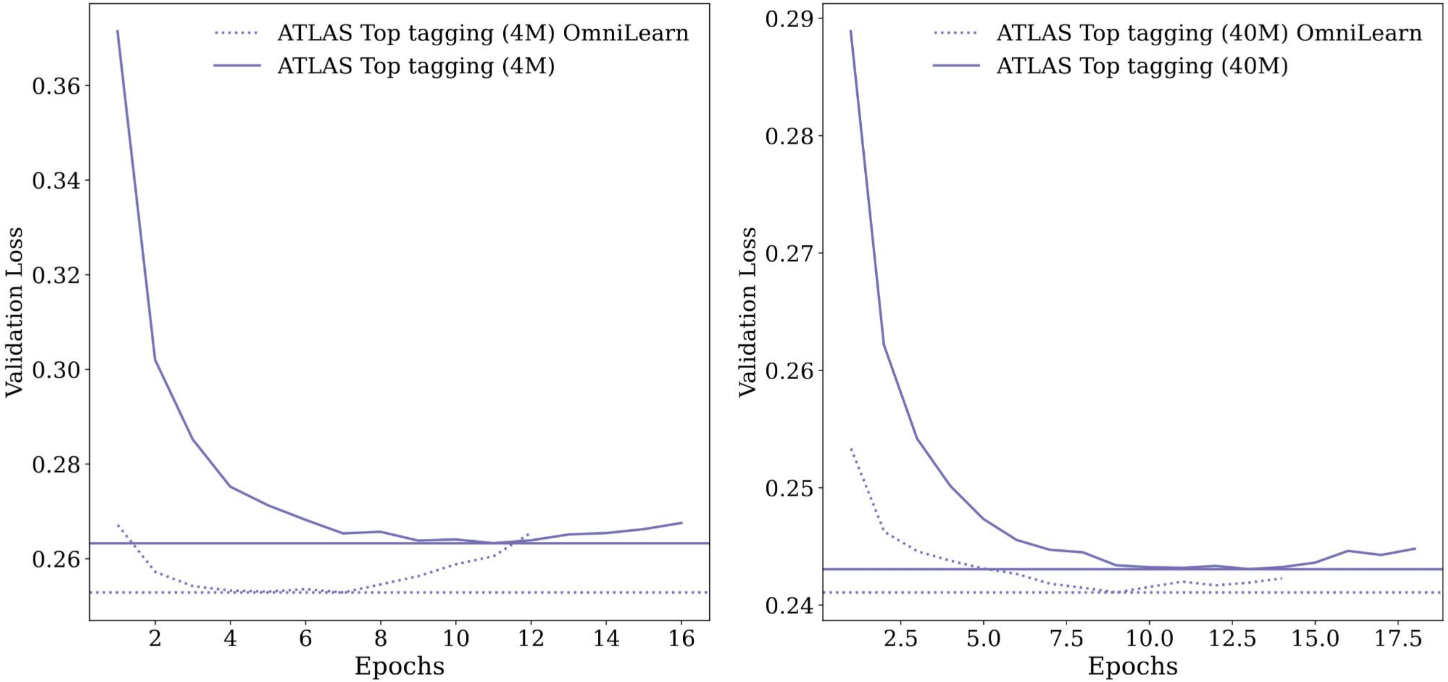
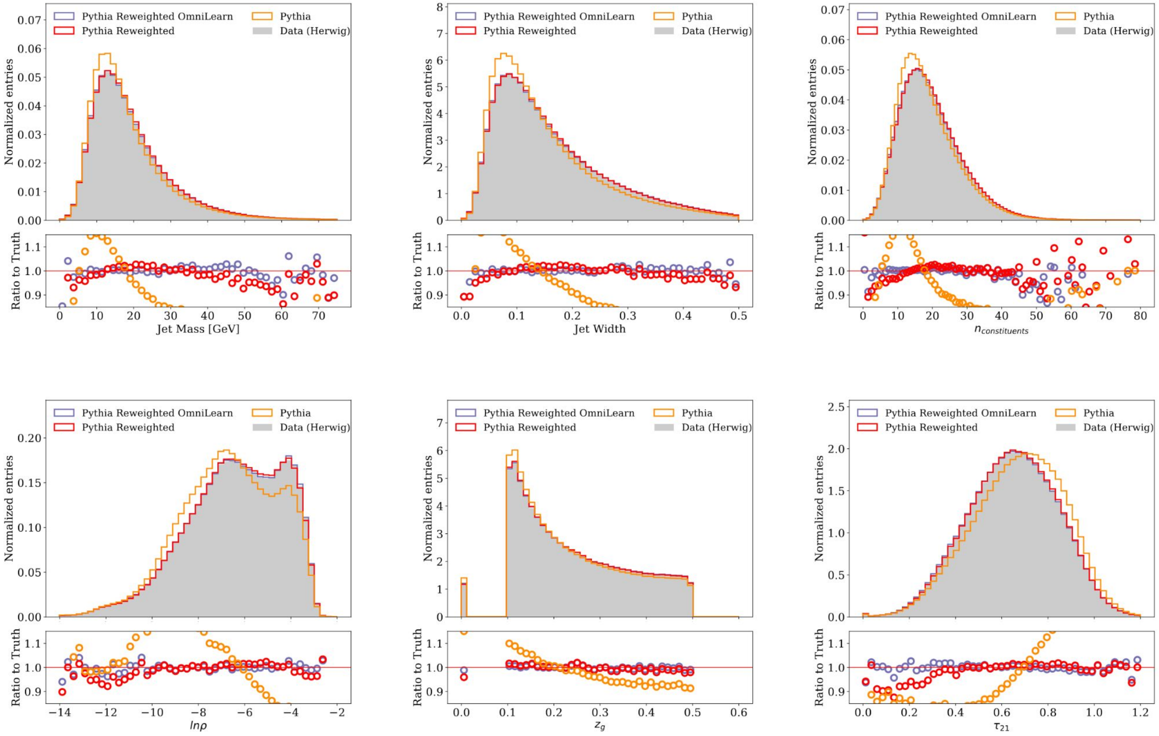
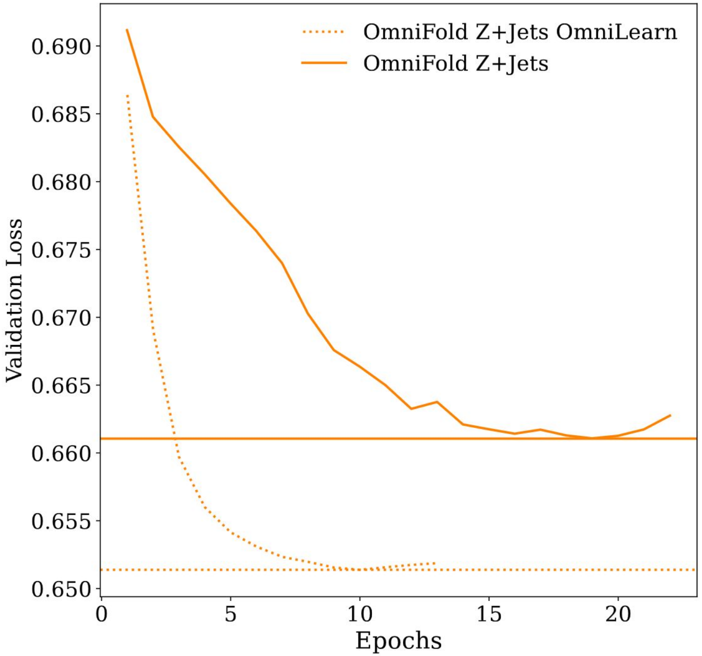
ATLAS Loss Curves



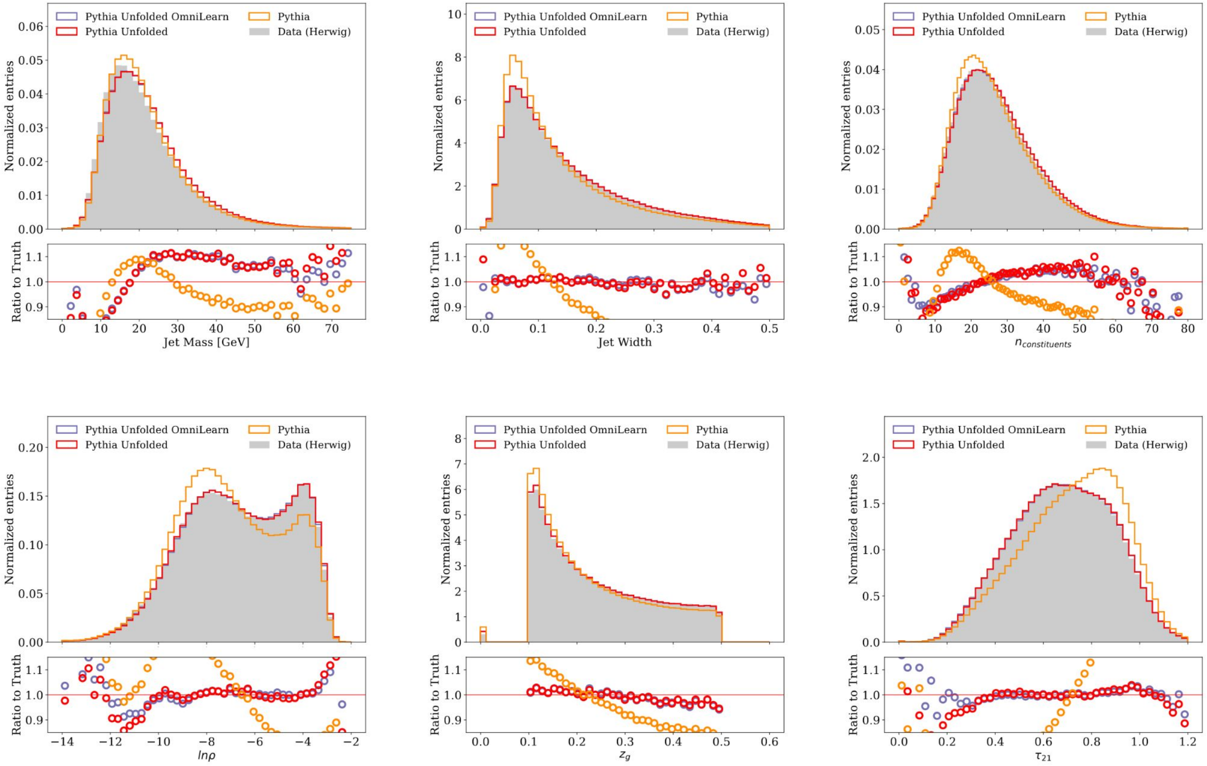
OmniLearn for reweighting



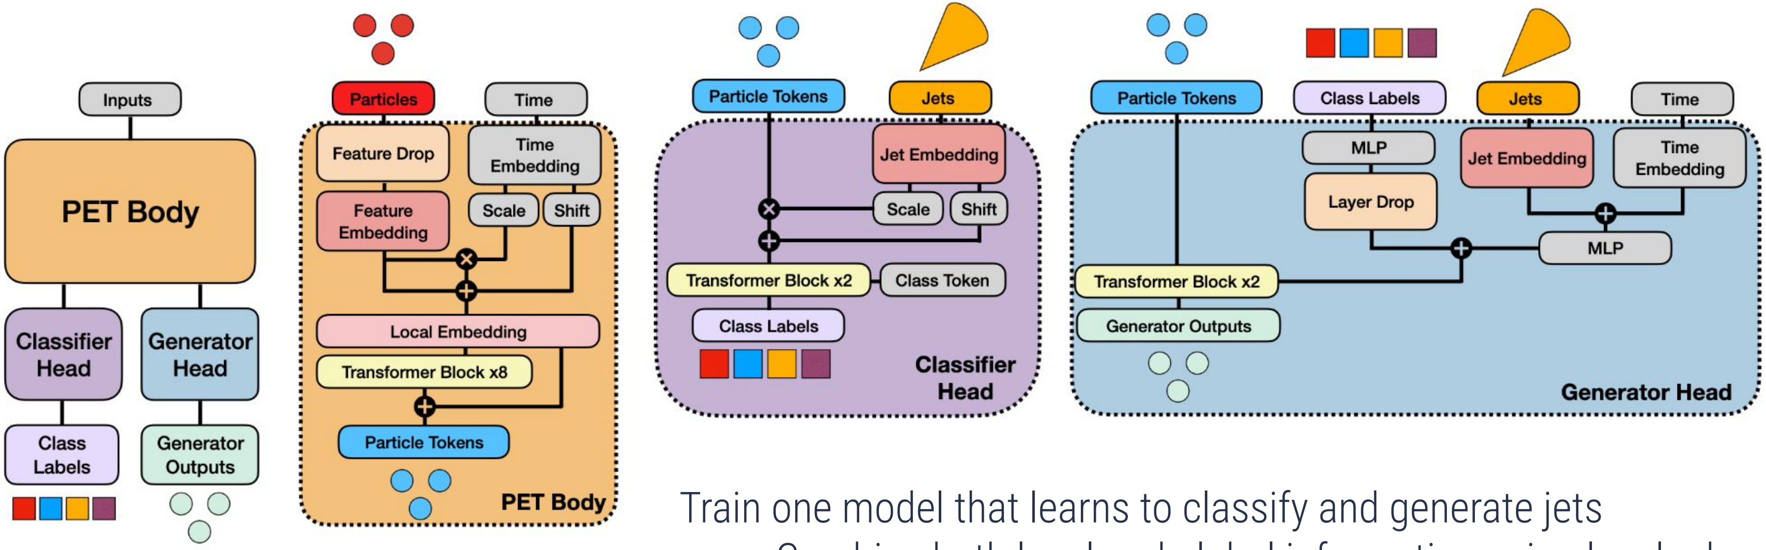


OmniLearn for Unfolding

BERKELEY LAB



PET



Train one model that learns to classify and generate jets

- Combine both local and global information using local edges and a transformer: **P**oint-**E**dge **T**ransformer

More details at: https://arxiv.org/abs/2404.16091

Loss function

$$\mathcal{L} = \mathcal{L}_{\text{class}} + \mathcal{L}_{\text{gen}} + \mathcal{L}_{\text{class smear}}$$
$$= \text{CE}(y, y_{\text{pred}}) + \|\mathbf{v} - \mathbf{v}_{\text{pred}}\|^2 + \alpha^2 \text{CE}(y, \hat{y}_{\text{pred}})$$

Straightforward loss function:

- **Cross entropy** for each class
- Perturbed data prediction from the **diffusion loss**
- Classification over perturbed inputs: **data augmentation**!

More details at: https://arxiv.org/abs/2404.16091

Input Dropout

Not all datasets contain the same information:

- Instead of training different models for each set of inputs we aim to have a model that works well in both cases
- **Feature Dropout**: With fixed probability, set some of the input features to 0 during training

$f_1, f_2, f_3, f_4, \boxed{f_5, f_6, f_7, f_8}$

$\rightarrow \boxed{f_5, f_6, f_7, f_8}$ **p = 0.9**

$\rightarrow \boxed{0,0,0,0}$ **p = 0.1**

More details at: https://arxiv.org/abs/2404.16091
