

Jet physics at LHCb

Tuesday, 30 July 2024 09:20 (20 minutes)

LHCb is a spectrometer targeting the forward region of proton-proton collisions, focusing on a pseudo-rapidity range between 2 and 5. Due to its optimal reconstruction performance and its clean environment, LHCb is an excellent experiment to study jets and their substructure. In this contribution, the latest measurements on jets physics at LHCb are presented, with a focus on the latest techniques used to reconstruct and calibrate jets.
