

Latest results from KM3NeT

Tuesday, 18 June 2024 16:55 (25 minutes)

The KM3NeT neutrino telescope is currently under construction in the Mediterranean sea. The detector is built in a modular fashion, with individual detection units (DUs) being deployed and starting data taking immediately after. With two detector configurations, KM3NeT is both searching for astrophysical neutrino sources with the KM3NeT/ARCA detectors, and measuring neutrino properties via atmospheric neutrino oscillations with KM3NeT/ORCA. In this talk, I will present the latest results and status of the KM3NeT collaboration, focusing on the first 3 years of data taking.
