

Multi-messenger **KM3NeT** and Astrophysics

Francesca Badaracco

On behalf of the **KM3NeT**
collaboration

What is KM3NeT?

DOM
(Digital Optical Module)

DU
(Detection Unit)

What is KM3NeT?

ANGULAR RESOLUTION

ARCA:

- Tracks 1 mrad
- Showers 1.5 degree

ORCA:

- Tracks 0.5 degree
- Showers 10-5 degrees

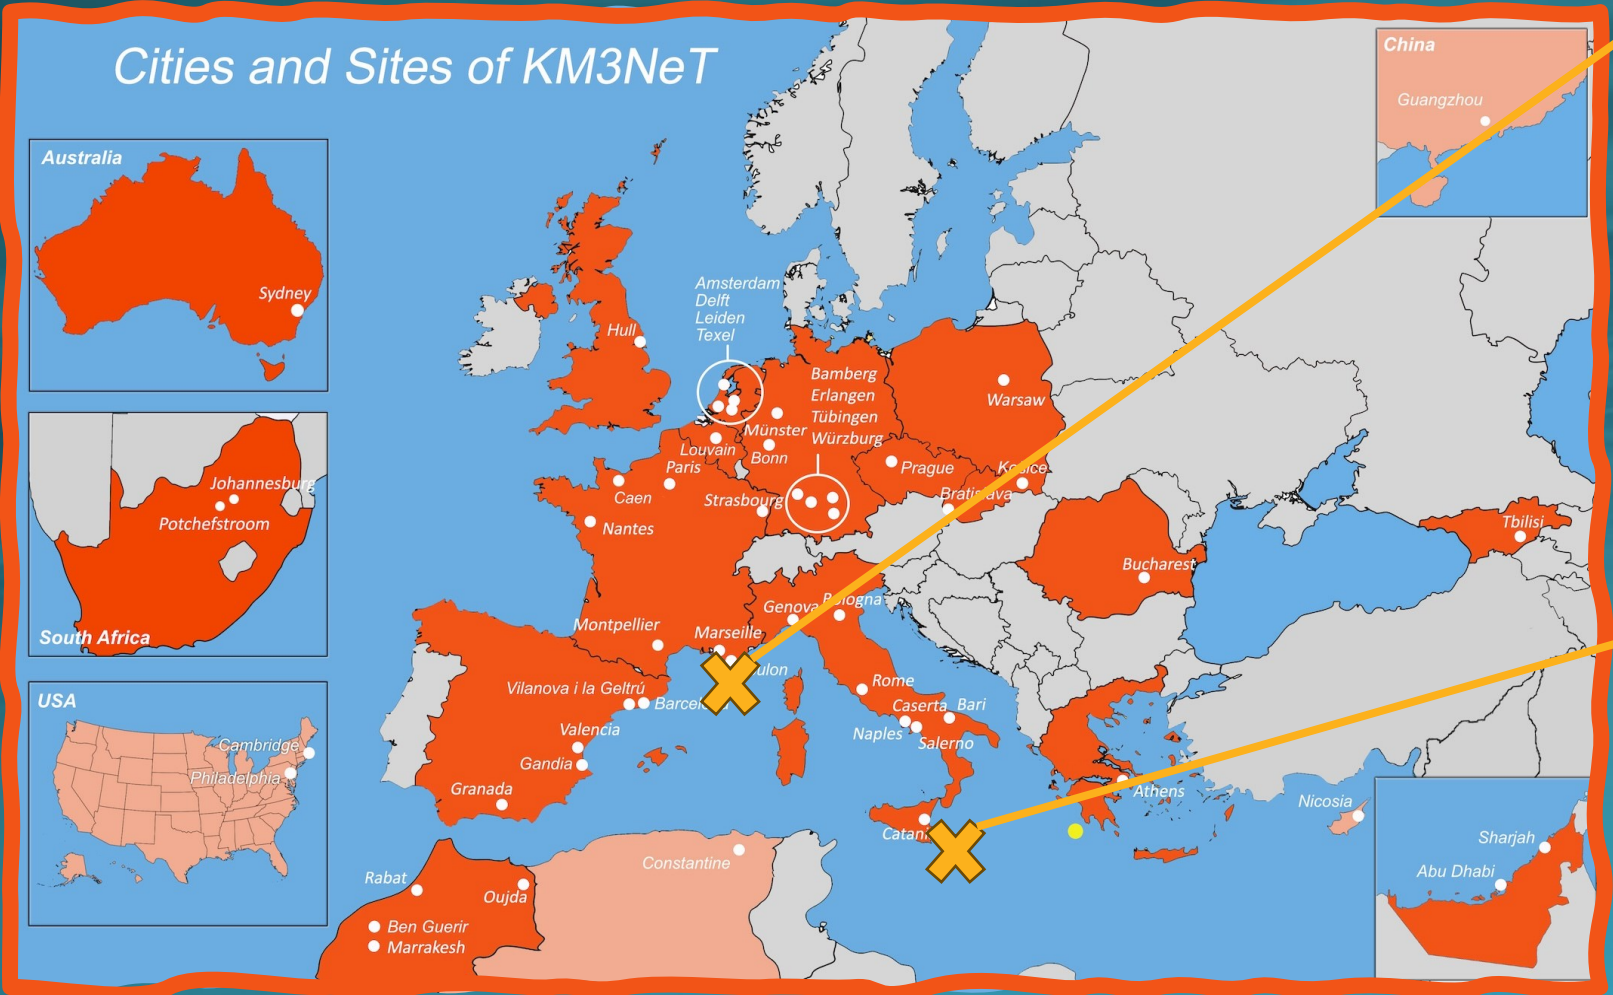

KM3NeT in numbers

106 m

ORCA: Oscillation Research with Cosmics in the Abyss

20 countries and 48 institutions

Cities and Sites of KM3NeT

ORCA23 (20%) --> ORCA115

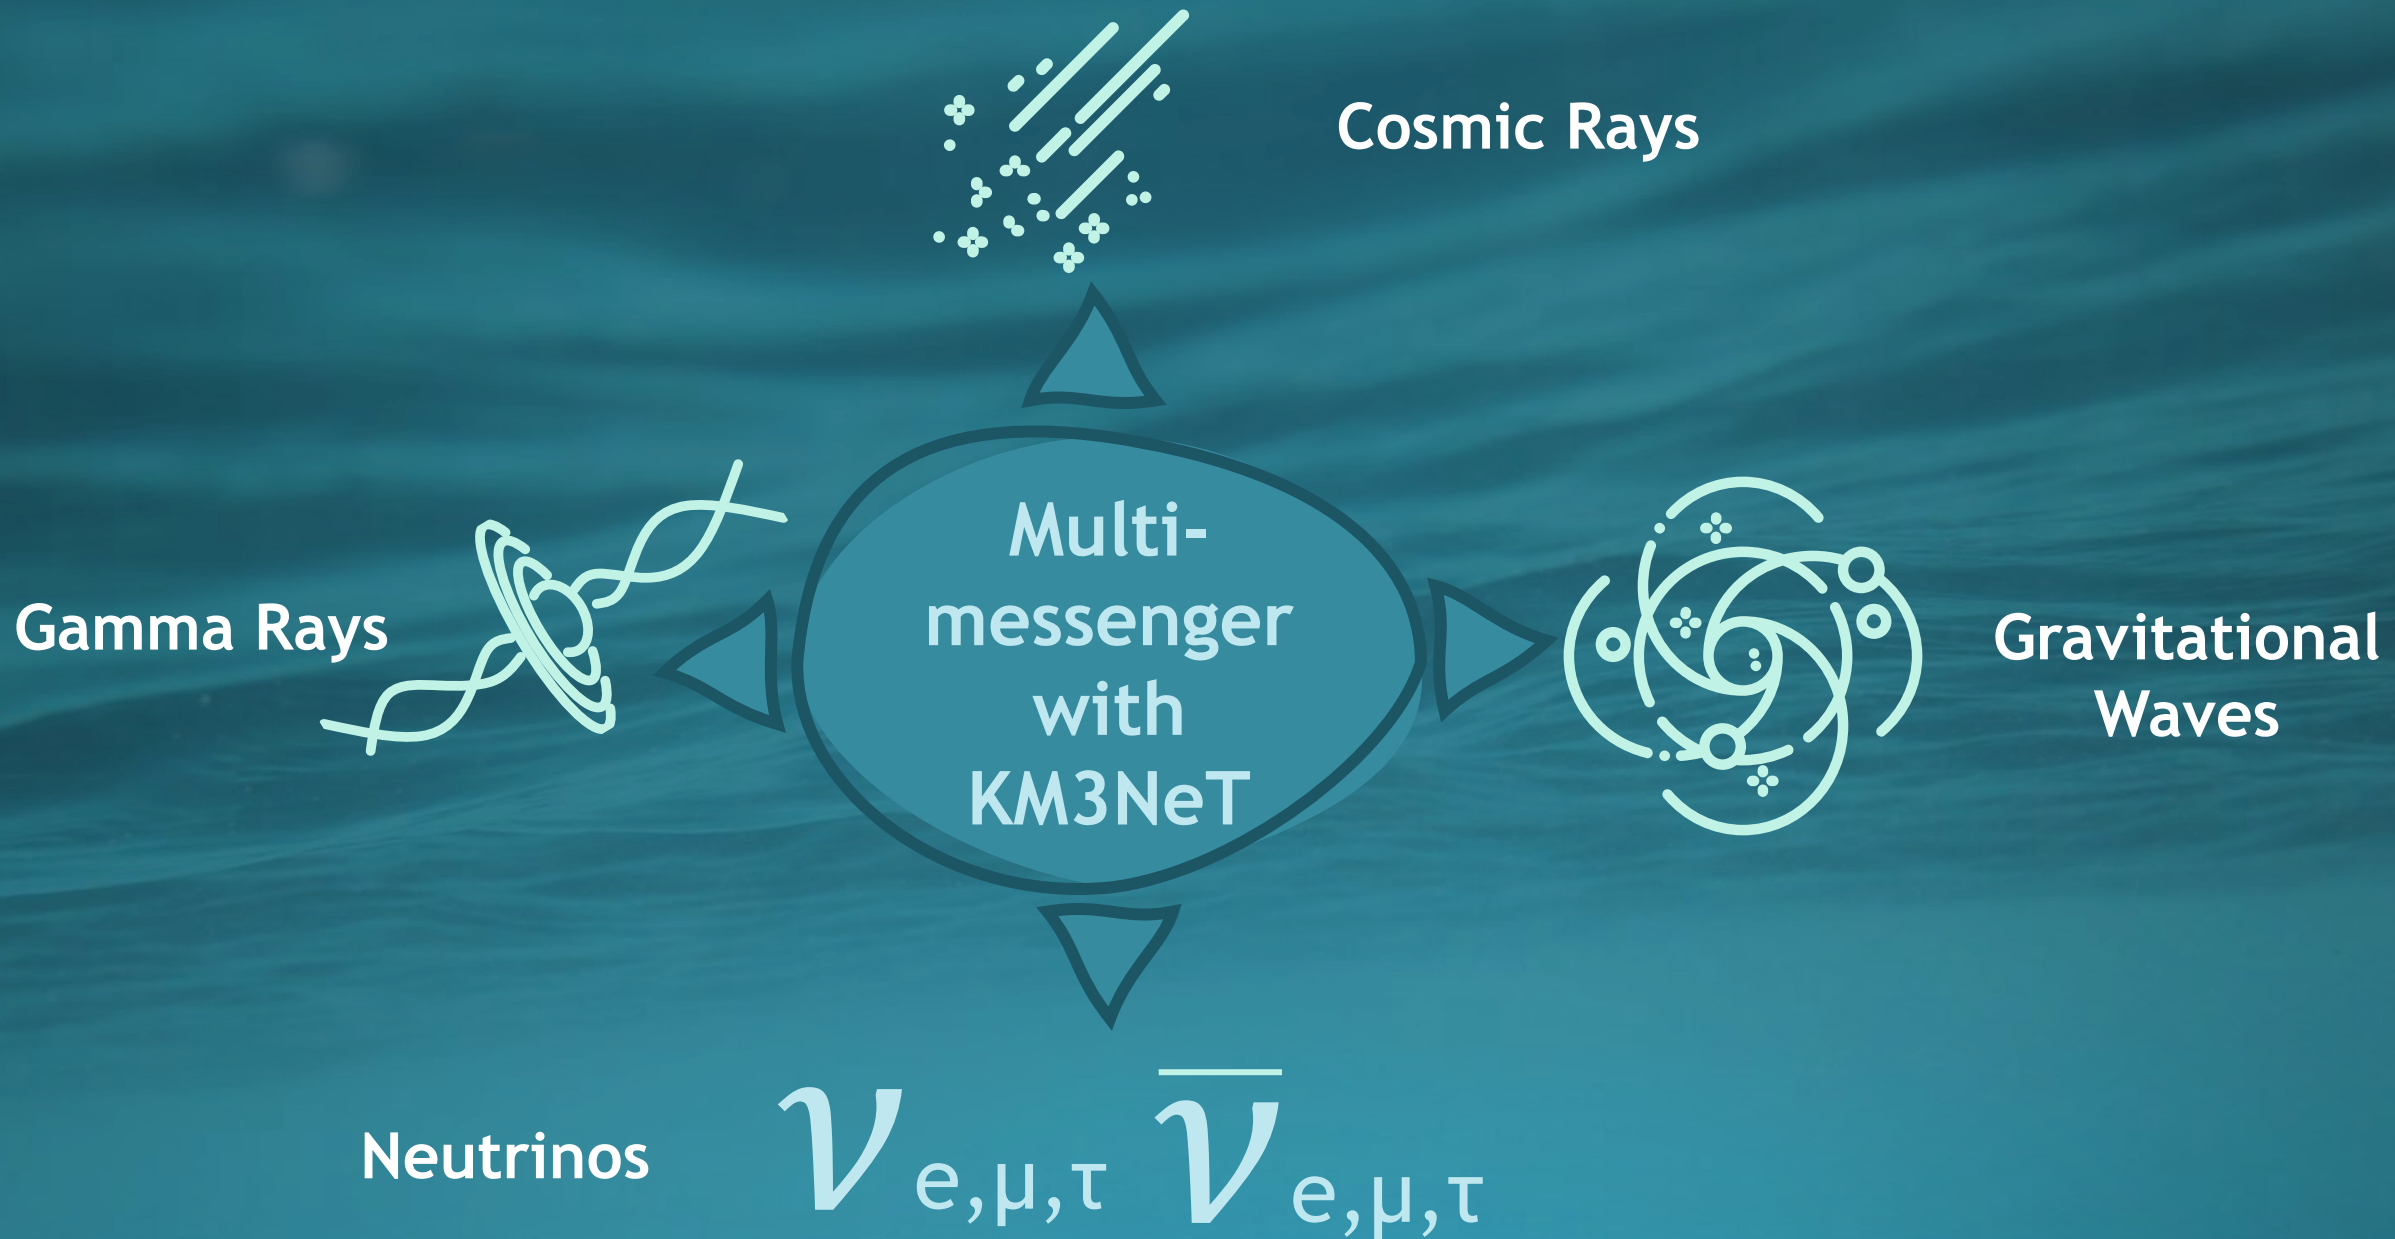

- Depth (max) = 2450 m
- DOM spacing: 20 m (horizontal); 9 m (vertical)

ARCA: Astroparticle Research with Cosmics in the Abyss

ARCA28 (12%) --> ARCA230

- Depth (max) = 3450 m
- DOM spacing: 90 m (horizontal); 36 m (vertical)

Multi-messenger with KM3NeT

Sending out ν -alerts

Status: work in progress

Follow-up of external alerts.

Status: ongoing

Selected alerts

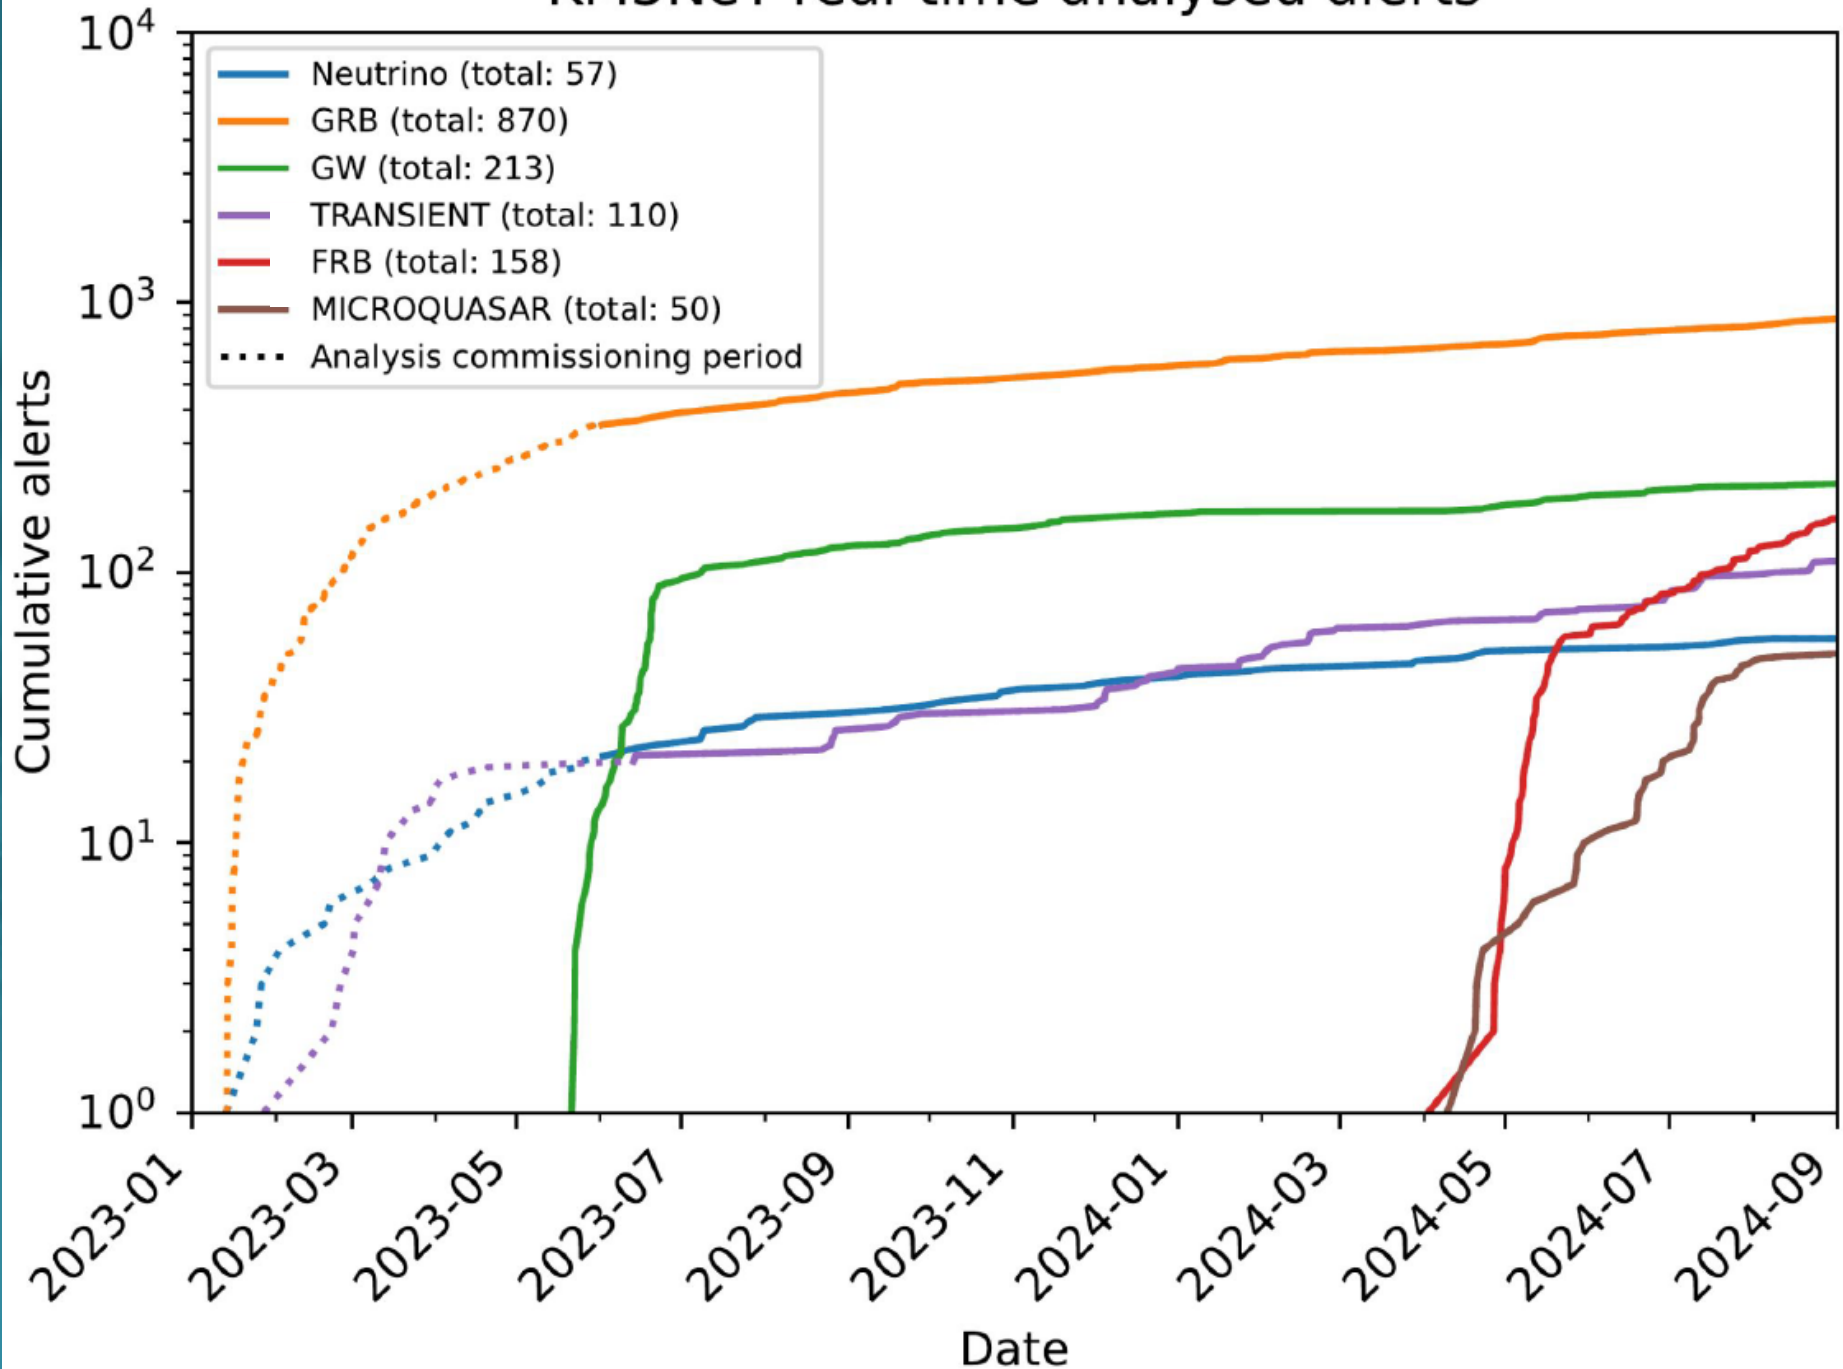

Median values:

- GRB: 1/day
- GW: 1/2 days
- Transient: 1/week
- Neutrino: 1/2 weeks
- FRB: 1/3 days
- Micro-Quasar: 1/3 days

KM3NeT real-time analysed alerts

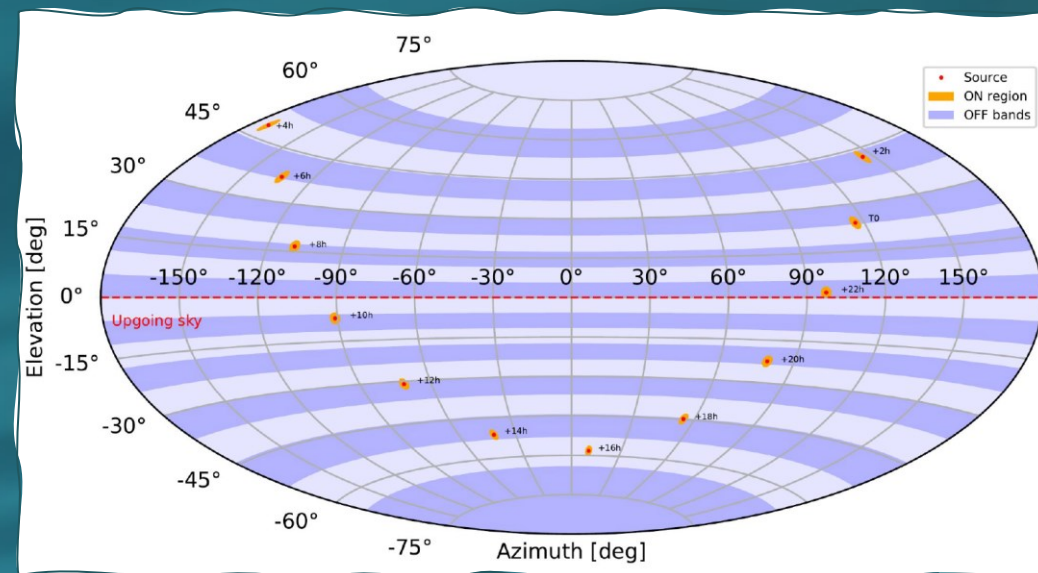

Analysed alerts

Follow-up

- ❖ Since the beginning of 2023 we are continuously analysing incoming alerts in real-time.
- ❖ Only track-like events are used for follow-up (inclusion of shower-like events still in progress)
- ❖ Binned ON/OFF analysis technique: the observations in the signal time window in a given sky search region are compared to the background expectation estimated from a larger time window.
 - Event selection optimised to reduce the background to the level with the best achievable significance

ON: Region from where the signal comes from, considering the source error+KM3NeT angular error (4° for ORCA and 2° for ARCA)

OFF: 2 weeks before + bands at same elevation of source

Alert sending

work in progress

HE- ν candidate:

Cuts for proper event selection (work in progress)
→ Send a notice (GCN / SNEWS2)

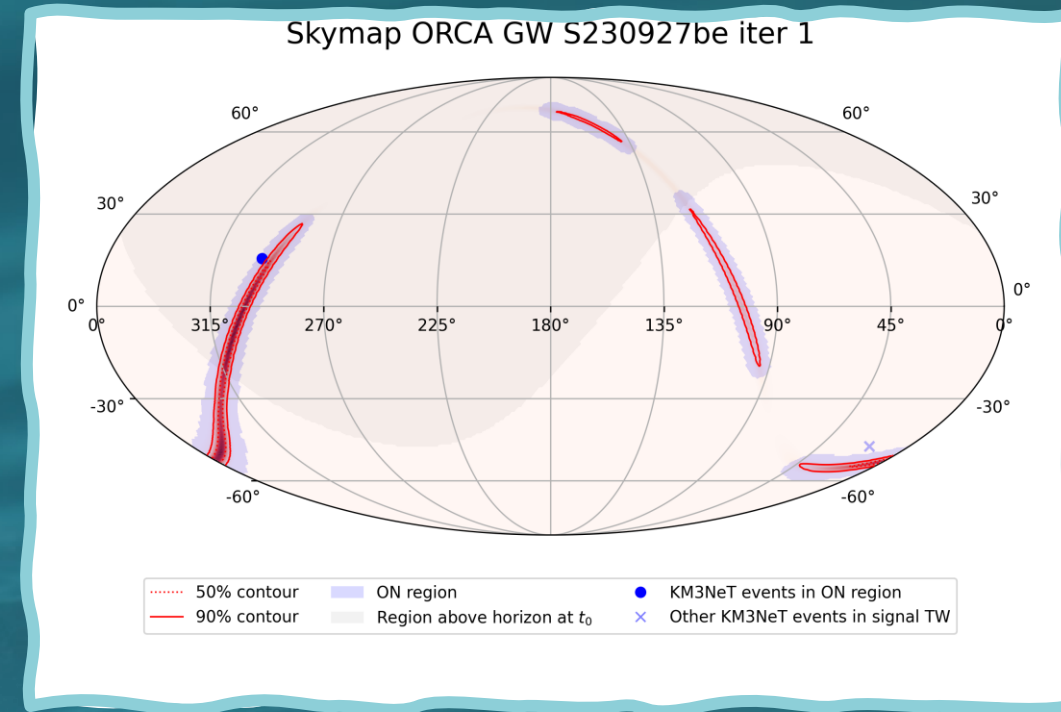

CCSN alerts:

Already working

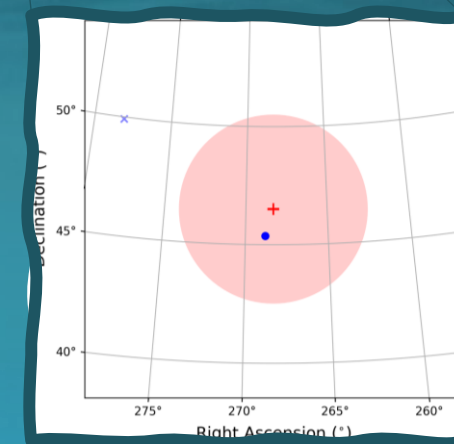

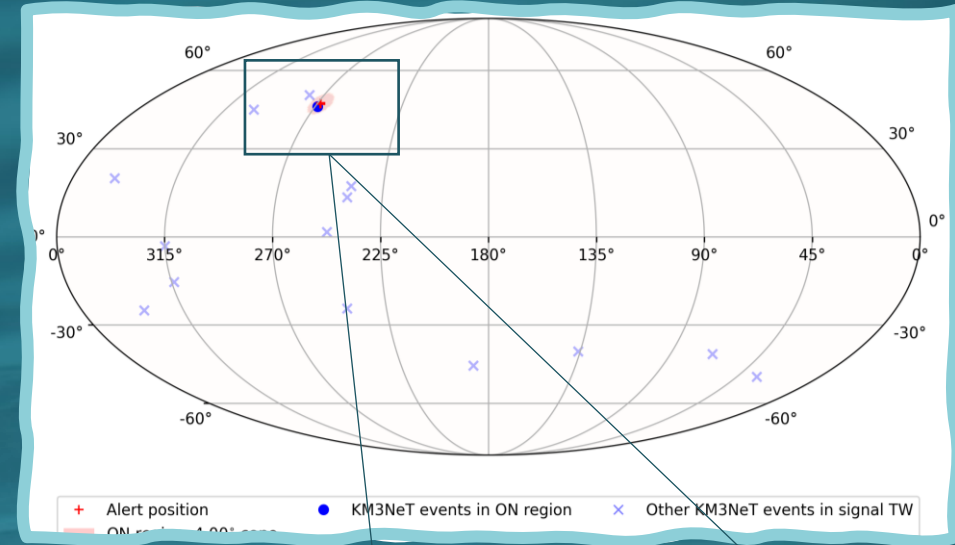

GW Follow-up:

- Alerts from: LVK (GCN)
- Period: Full run O4a covered. The follow-up of run O4b is currently ongoing
- No significant correlation found.
- Example: S230927be (BBH merger)
 - Expected background: 0.018 events
 - 1 event in ON \Rightarrow p-value 0.019

$\nu_{e,\mu,\tau}$ $\bar{\nu}_{e,\mu,\tau}$ HE Neutrino Follow-up:

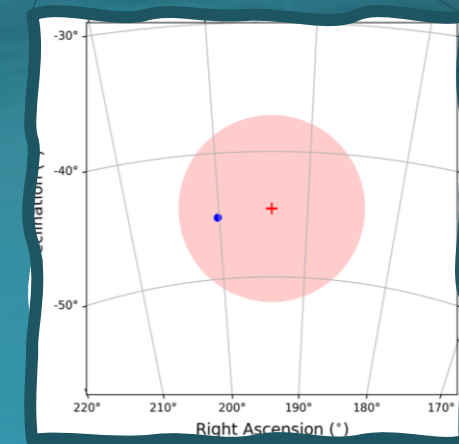

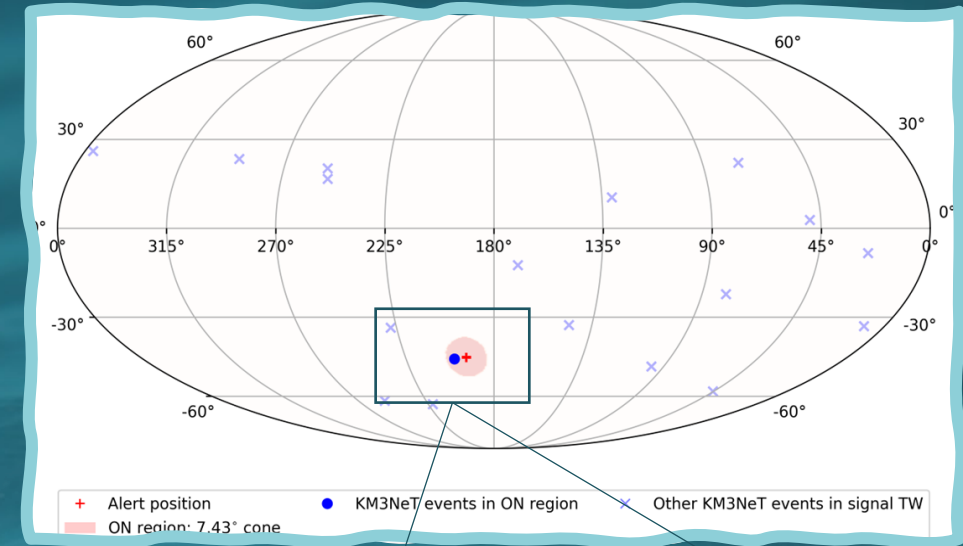

- Alerts from: IceCube bronze and gold (GCN)
- No significant correlation found.
- Example: IC 231027A (Gold)
 - Expected background: 0.07 events
 - 1 event in ON \Rightarrow p-value 0.068

GRB Follow-up:

- Alerts from: Fermi, Swift & Integral (GCN)
- No significant correlation found.
- Example: 722864655 (Fermi)
 - Expected background: 0.13 events
 - 1 event in ON \Rightarrow p-value 0.12

FRB and μ -Quasars Follow-up:

Alerts from:

- Chime VEvent broker
- TNS catalog (delayed by days to months)

No correlations up to now

Transient sources selected from Fermi, Swift, Maxi, HAWC, EP_wxt (internal broker)

No correlations up to now

CCSN Follow-up:

- Alert system: neutrinos arrive hours before EM radiation
- Main detection channel for CCSN neutrinos: inverse beta decay ($\bar{\nu}_e + p^+ \rightarrow e^+ + n$)
- Order of 10 MeV
- Different strategy from the ON/OFF approach: KM3NeT is optimized for the detection of neutrinos $> \text{GeV}$ --> individual positron trajectories cannot be reconstructed. --> Search for an excess of coincidences between PMTs in single DOMs above the expected background of the detector

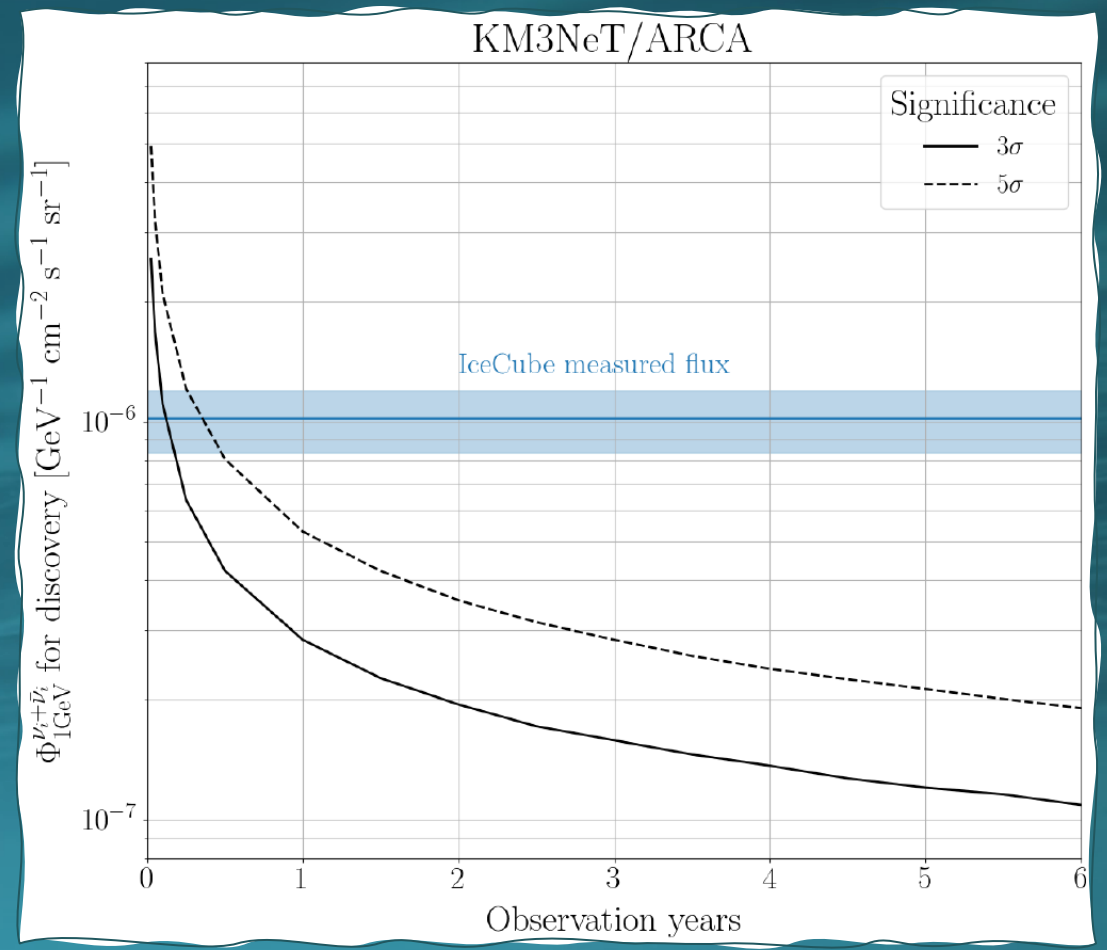

Credits: Fermilab

Astronomy potential for KM3NeT/ARCA 230

Point-like source sensitivity as a function of the declination angle for a neutrino flux with spectral index $\gamma = 2$.

3 σ and 5 σ discovery flux for a diffuse neutrino flux with spectral index $\gamma = 2.37$ as a function of observation time.

One more thing if there is time...

KM3NeT is
interdisciplinary and
helps biologists to
study cetaceans by
recording their sounds

Conclusions

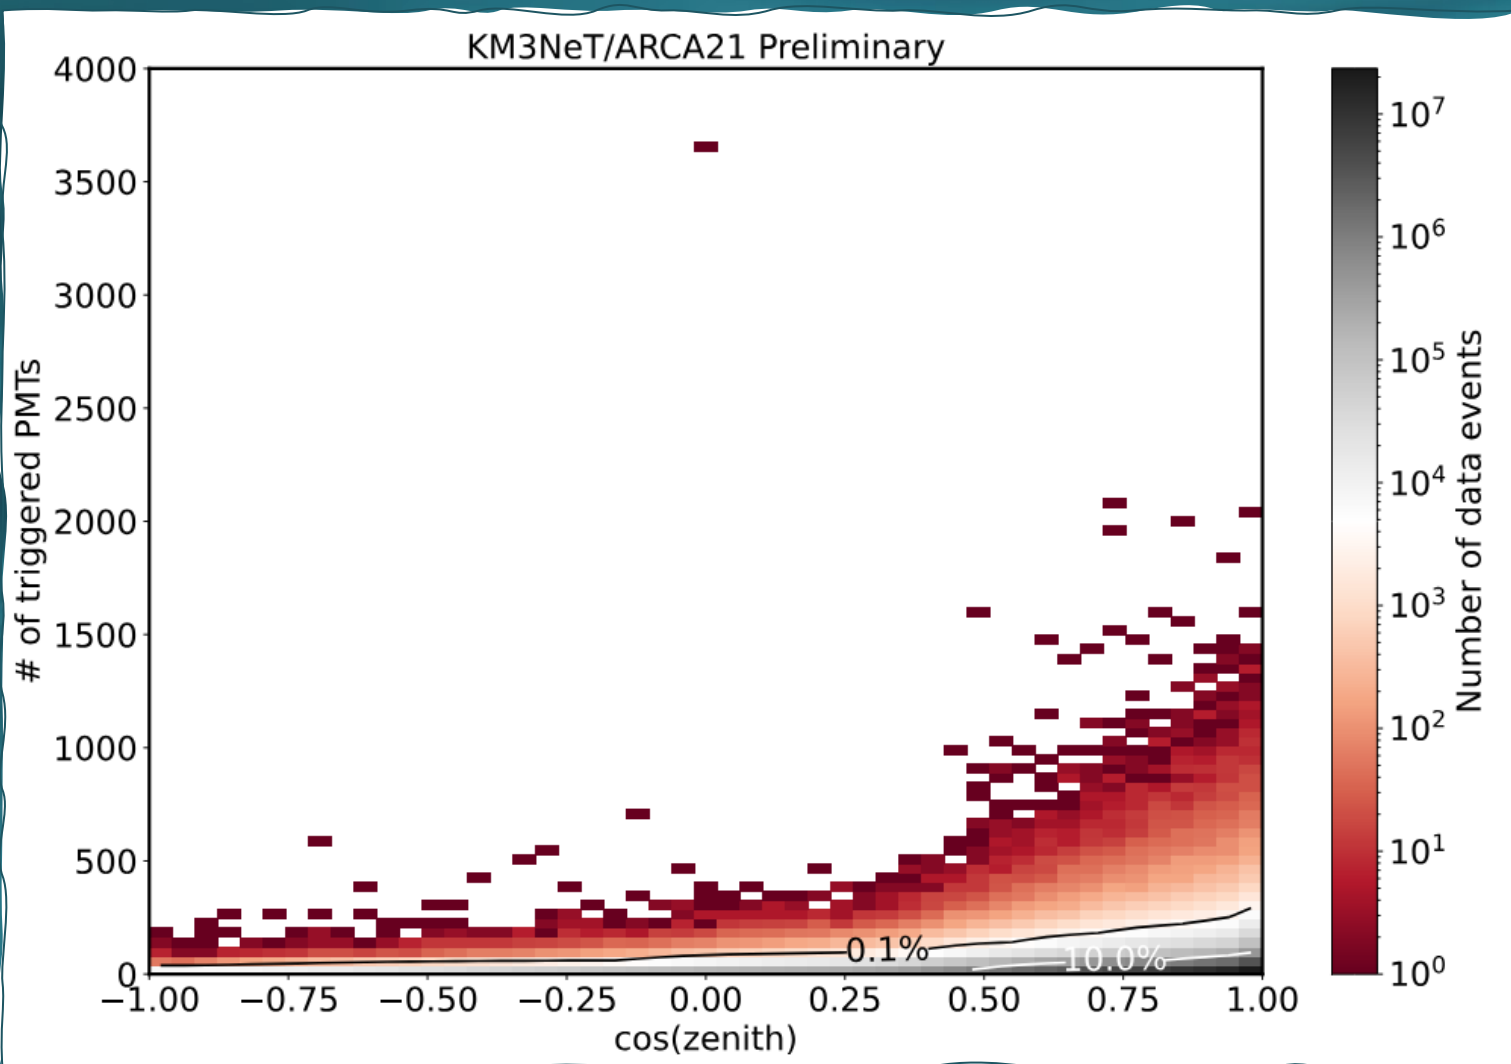

- ❖ KM3NeT is already in data taking mode even with a partial detector.
- ❖ Online analyses are ongoing:
 - ❖ Follow-up of external alerts
 - ❖ Work in progress regarding sending out alerts
- ❖ No significant spatial and temporal coincidences found up to now.
- ❖ VHE neutrino found! PAPER COMING SOON

BACK UP SLIDES

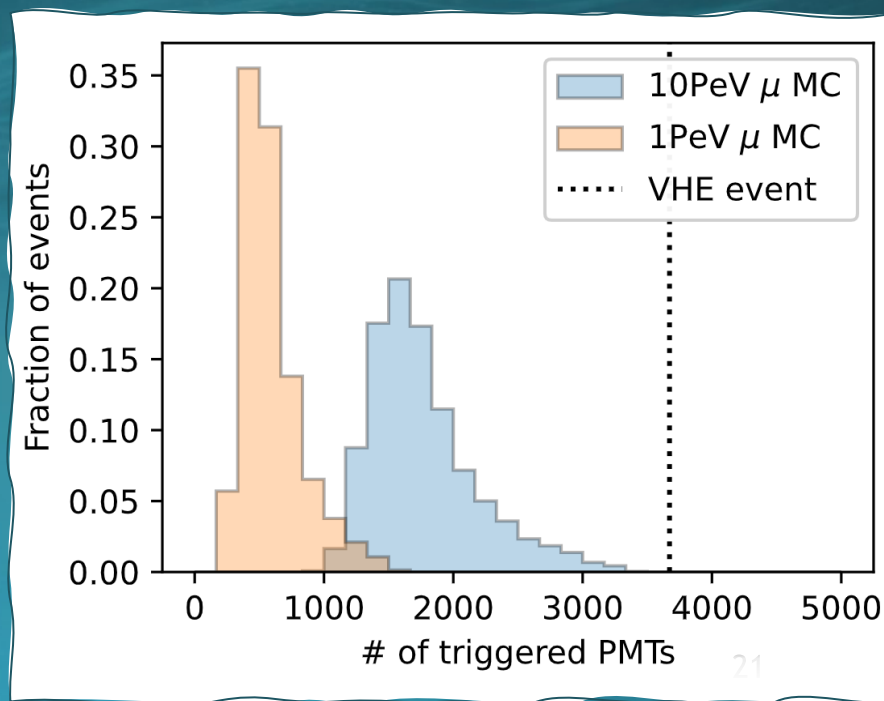

VHE event

well-reconstructed track, indicative of a highly-relativistic muon travelling several hundreds of metres through the detector.

#probability that the muon originated from a cosmic ray interacting in the atmosphere is negligible ($\ll 10^{-10}$) per year

Energy of some tens of PeV

Background sources in KM3NeT

Bioluminescence

Atmospheric μ

Not bananas...
but ^{40}K

GRB 221009A :

- Alerts from: Fermi
- No significant correlation found.
- Above KM3NeT horizon --> larger background
- Multiple time windows tested
