H4 TEST - HERD
Measurement of setup of HERD experiment
Measurement of October 09th, 2023

The EDMS document **2977475**, containing this report can be found at the following address:

<https://edms.cern.ch/document/2977475/1>

1 GENERAL INTRODUCTION

On the demand of Nicola MORI, measurements of the HERD experimental setup in H4 test beam area took place on October 09th, 2023. The aim of the measurement has been to measure the relative position of the detectors and the position of the individual detectors with respect to the nominal beam line.

The following detectors have been part of the setup and have been measured:

- Trigger detector (4 points)
- European SCD detector (4 points)
- IHEP SCD detector (2 points)
- IHEP PSD detector (2 points)
- European PSD detector (2 points)
- Mini fit (EPFL) (8 points)
- Support Table (upstream) (4 points)
- Support Table (downstream) (4 points)
- Calorimeter (4 points)

2 COORDINATE SYSTEM

The coordinate system of the H4TEST experimental zone is defined as follows:

- **Origin:** Beam exit point of QNL479
- **X axis:** Nominal beam line passing through magnets QNL476 and QNL479, positive in the beam direction.
- **Y axis:** perpendicular to X axis in horizontal plane, positive from Salève side toward the Jura side.
- **Z axis:** vertical, perpendicular to the XY plane, positive to the top.

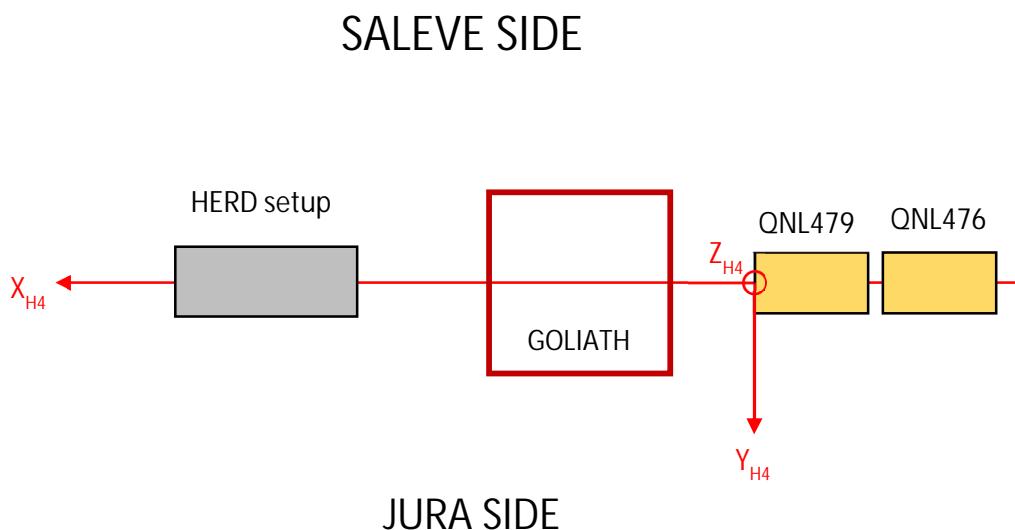

Figure 1 : Top view of the coordinate system

3 DISTRIBUTION OF THE MEASURED POINTS

The point distribution has been chosen that the points *detector_01* has positive Y-coordinates and is on the upstream end of the item if more than two points have been measured.

3.1 Trigger detector

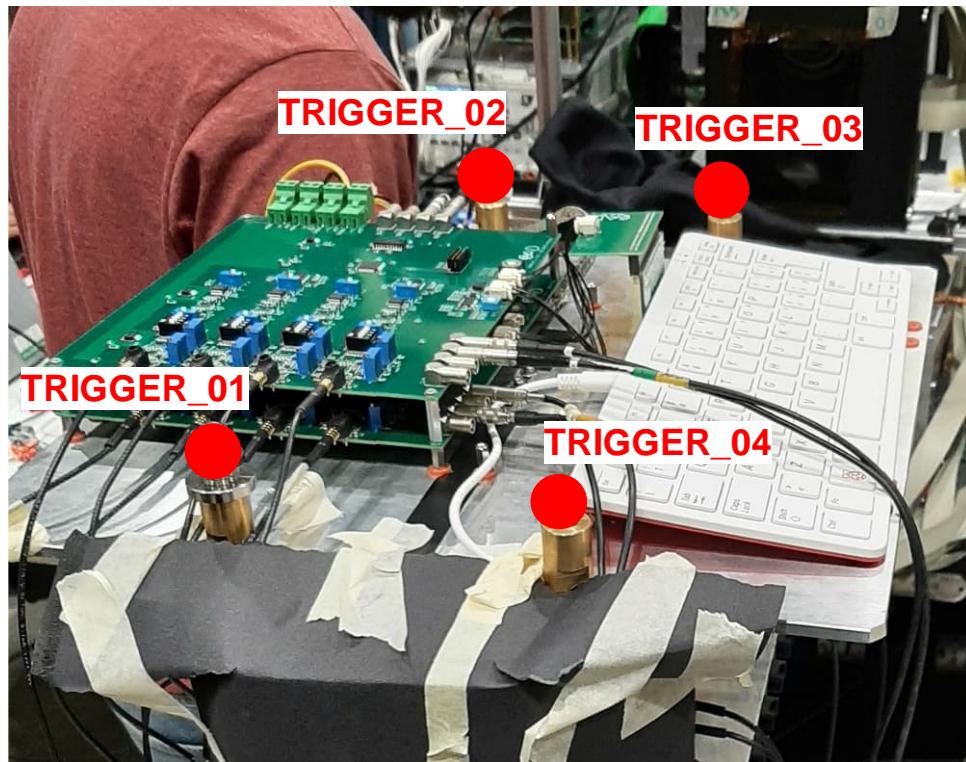

Figure 2: Distribution of points and point names on the Trigger detector

3.2 European SCD detector

Figure 3: Distribution of points and point names on the European SCD

3.3 IHEP SCD detector

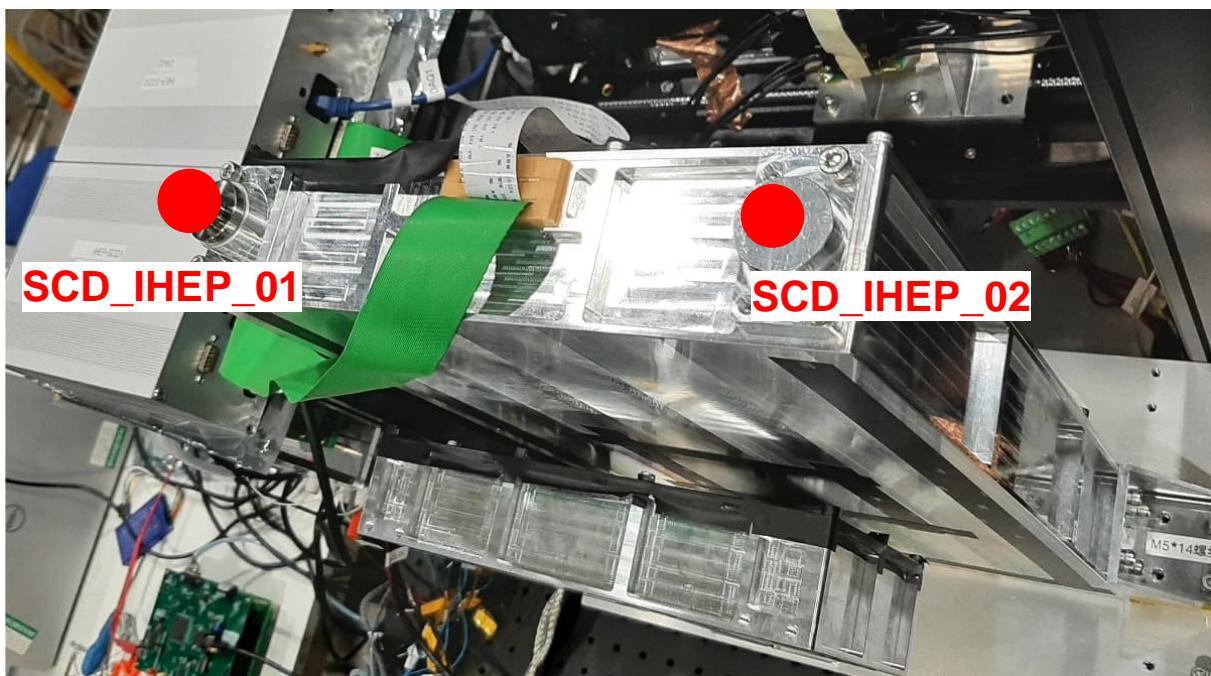

Figure 4: Distribution of points and point names on the IHEP SCD

3.4 IHEP PSD detector and European PSD detector

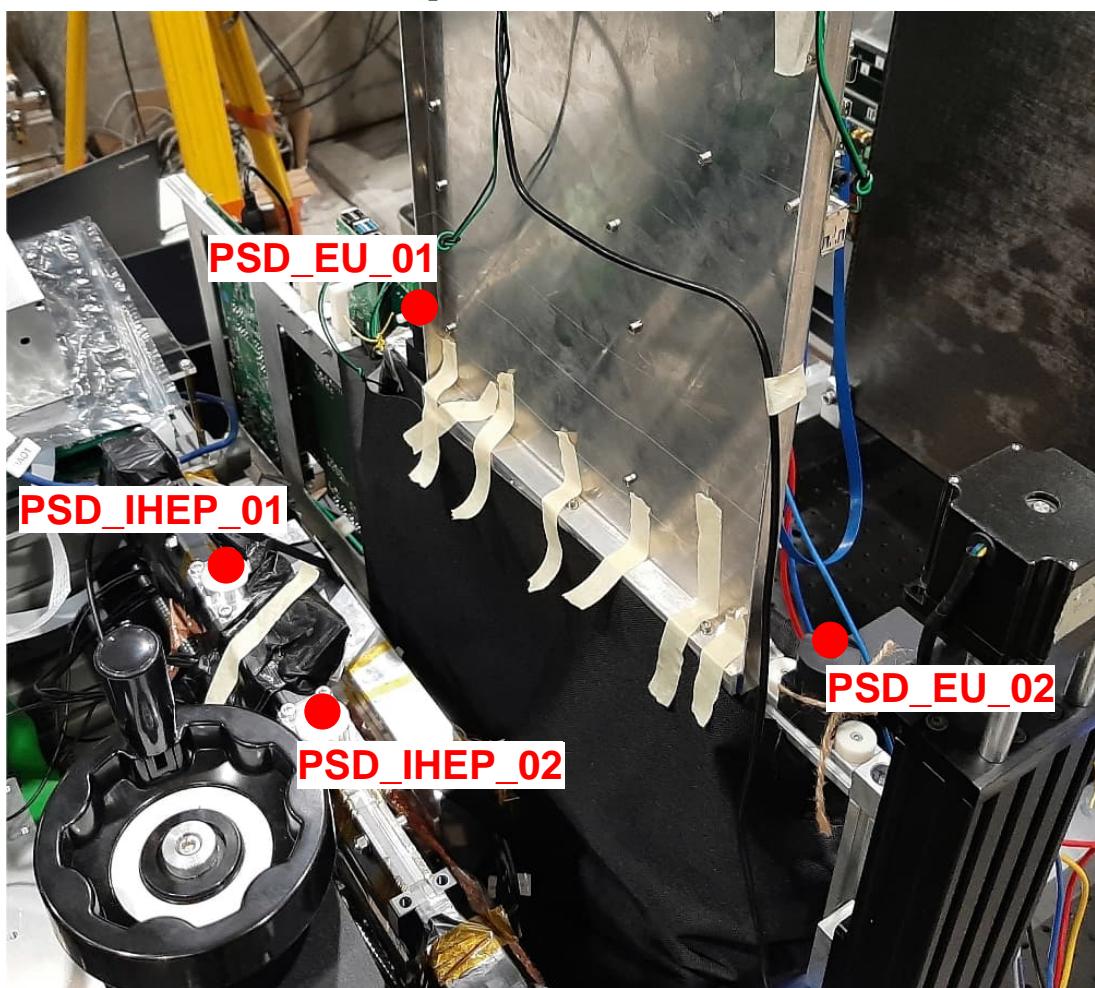

Figure 5: Distribution of points and point names on the PSD detectors

3.5 MiniFit (EPFL)

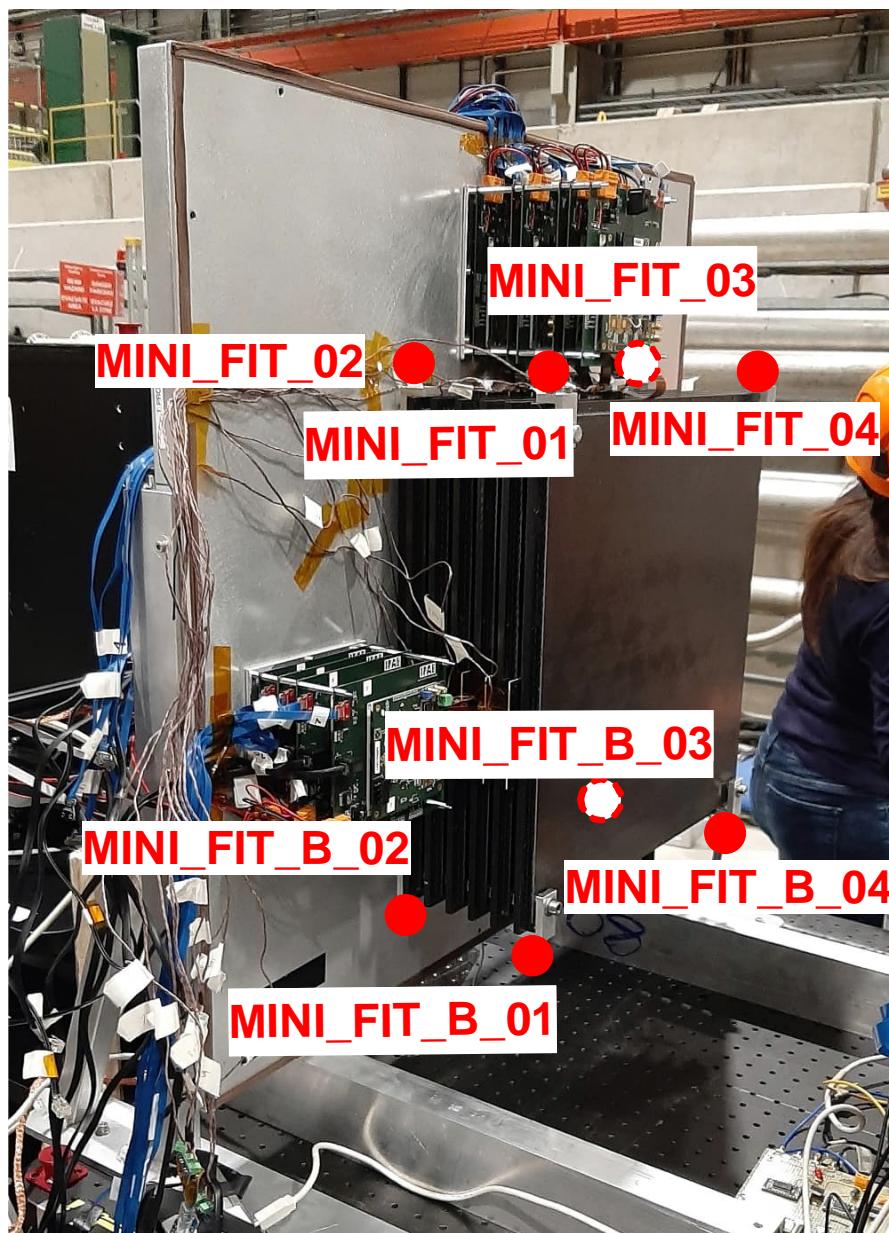

Figure 6: Distribution of point and points names on the Mini Fit detector

3.6 Support table (upstream)

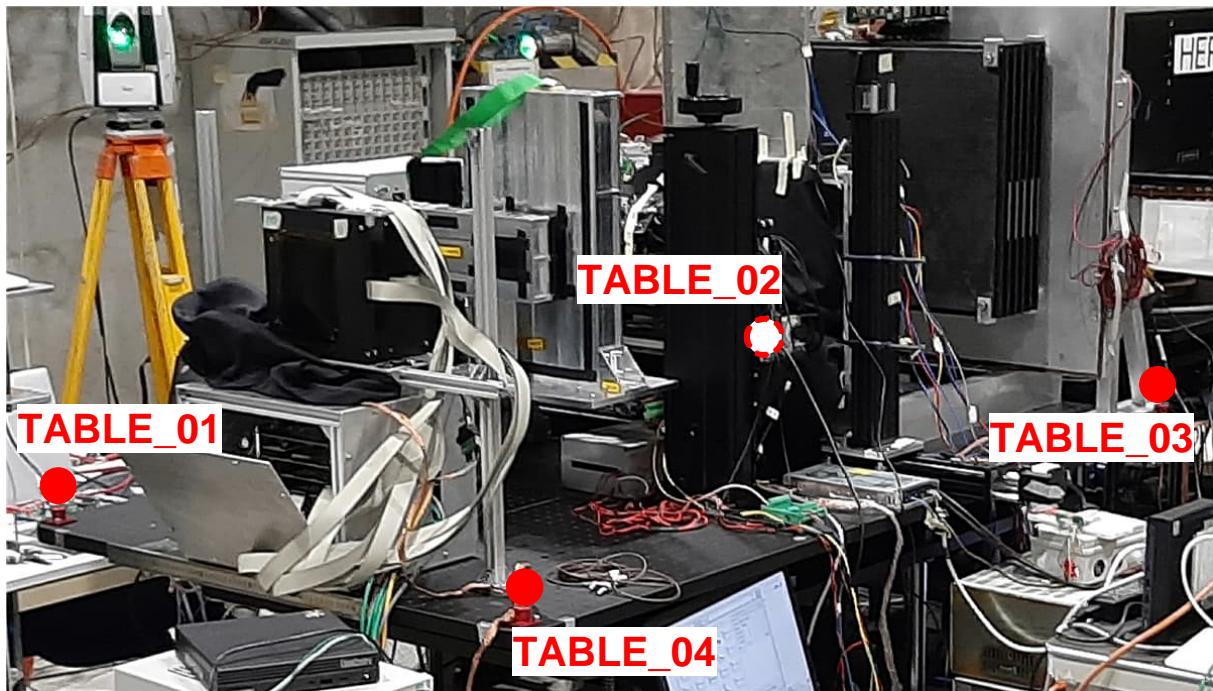

Figure 7: Distribution of points and point names on the support table (upstream)

3.7 Calorimeter and Support table (downstream)

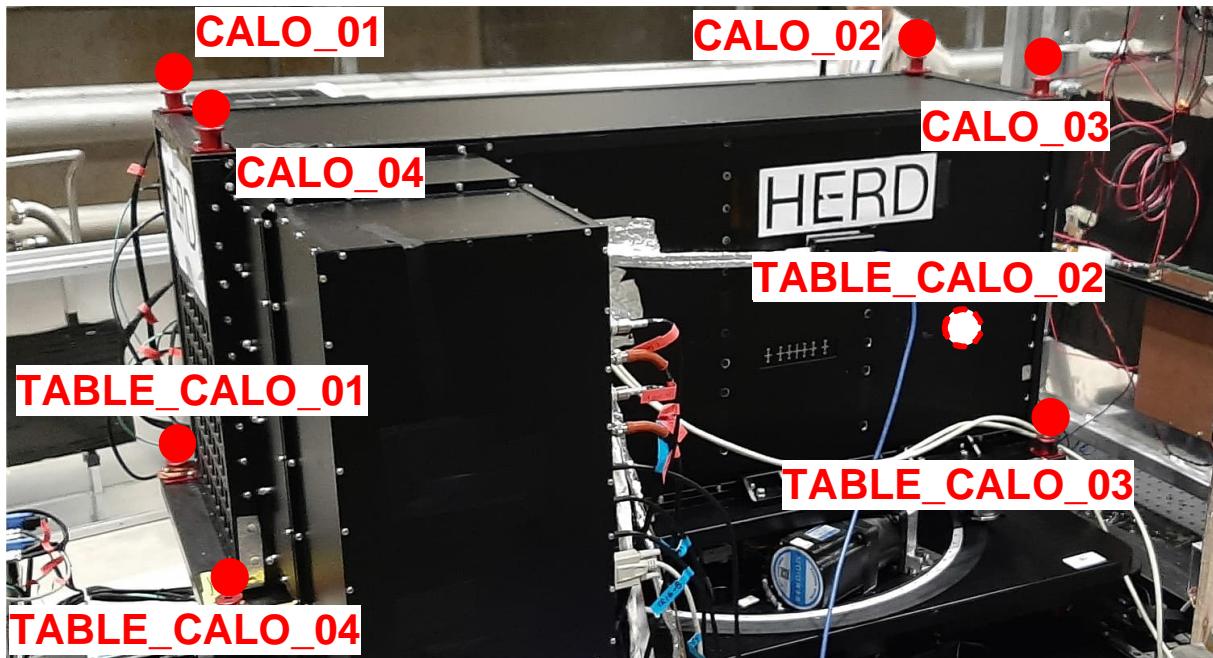

Figure 8: Distribution of point and points names on the Calorimeter and the calorimeter support table

4 SURVEY TARGET AND APPLIED ADAPTER

The measured points are situated on survey reference holes (8H7). The measured points of all items except the European PSD include a target offset of 20.0 mm in vertical direction - Z axis - with respect to the adapter contact surface as visible in Figure 9.

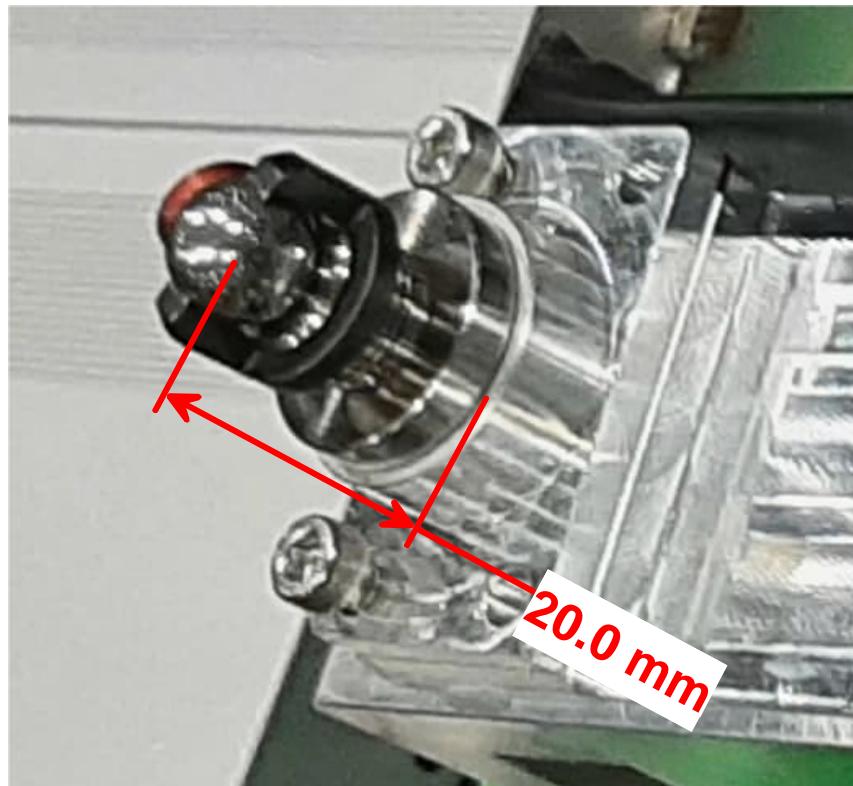

Figure 9: Target offset of 20.0 mm caused by the survey target and adapter

The European PSD the diameter of the reference holes has been too small and the pin of the target holder could not be inserted. Instead, the 0.5-inch spherical mounted retroreflector has been added directly on the 8 mm hole. This induces and offset of approximately 6 mm with respect to the contact surface.

5 RESULTS OF THE MEASUREMENT

In the table below, measured coordinates are given in the centre of the survey targets in the coordinate system as described in §2. Coordinates are given with precision **0.5 mm** at 1σ level.

The relative precision of the measurement of the HERD survey reference points can be expected to be at **0.15 mm** at 1σ level.
