*EMI/EGI Issues*

# Director's Mantra

*According to our Project Director, Alberto Di Meglio :*

The European Middleware Initiative (EMI) project represents a close collaboration of the major European middleware providers - **ARC, gLite, UNICORE and dCache** - to establish a sustainable model to **support, harmonise and evolve distributed computing middleware** for deployment in EGI, PRACE and other distributed e-Infrastructures

# Translates to EMI data as

Maintain and improve the currently existing production WLCG software stack !

Allow new communities to utilize the EMI middle-wares by applying standards

# Components

## EMI, the components

EMI INFO-RI-261611

10

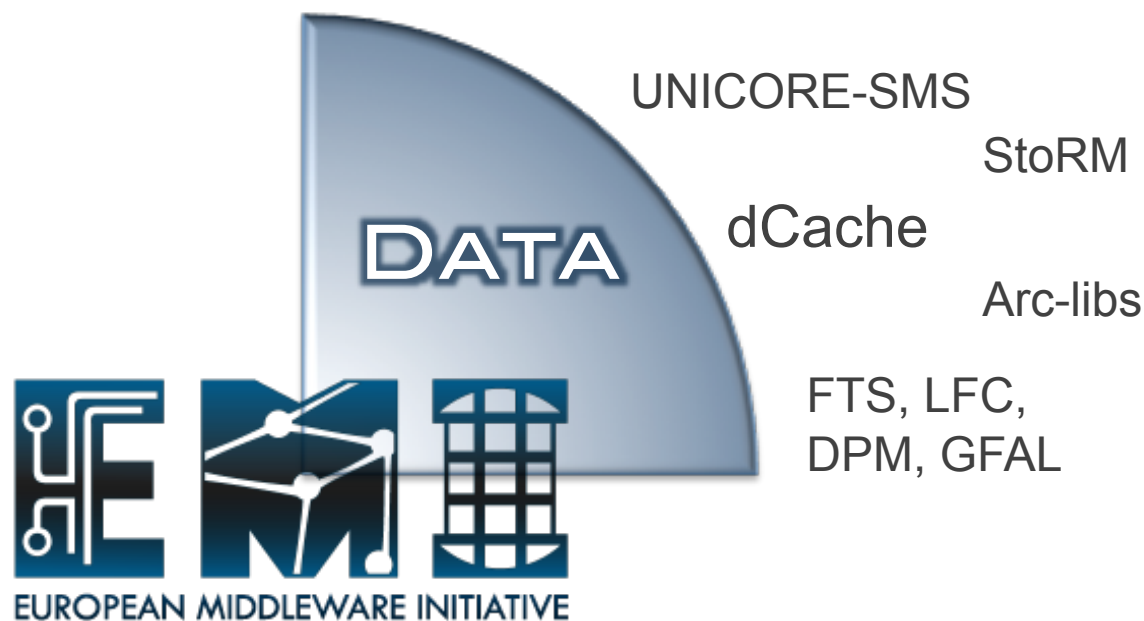

# The EMI Pie

63 components and about 350 packages

# The EMI Pie

63 components and about 350 packages

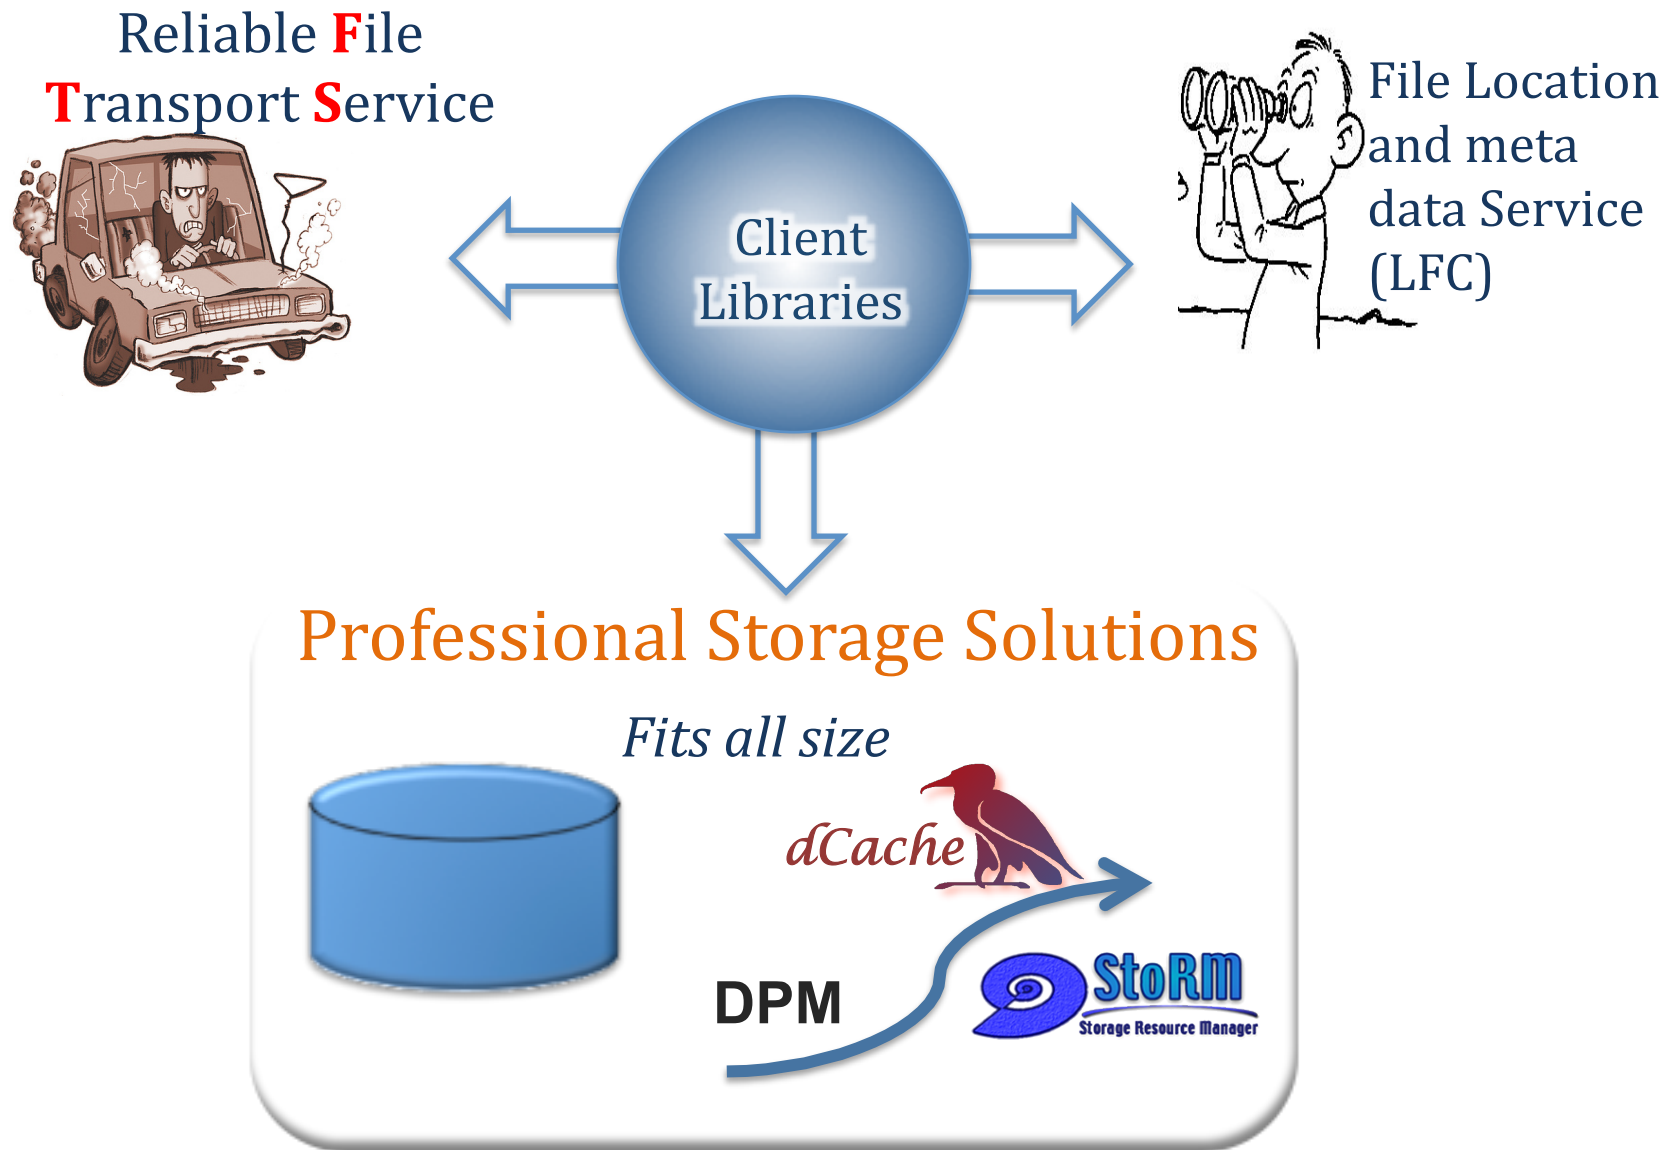

# What does EMI-Data provide ?

CART  
The EMI-Data shopping ~~basket~~

# The EMI shopping cart

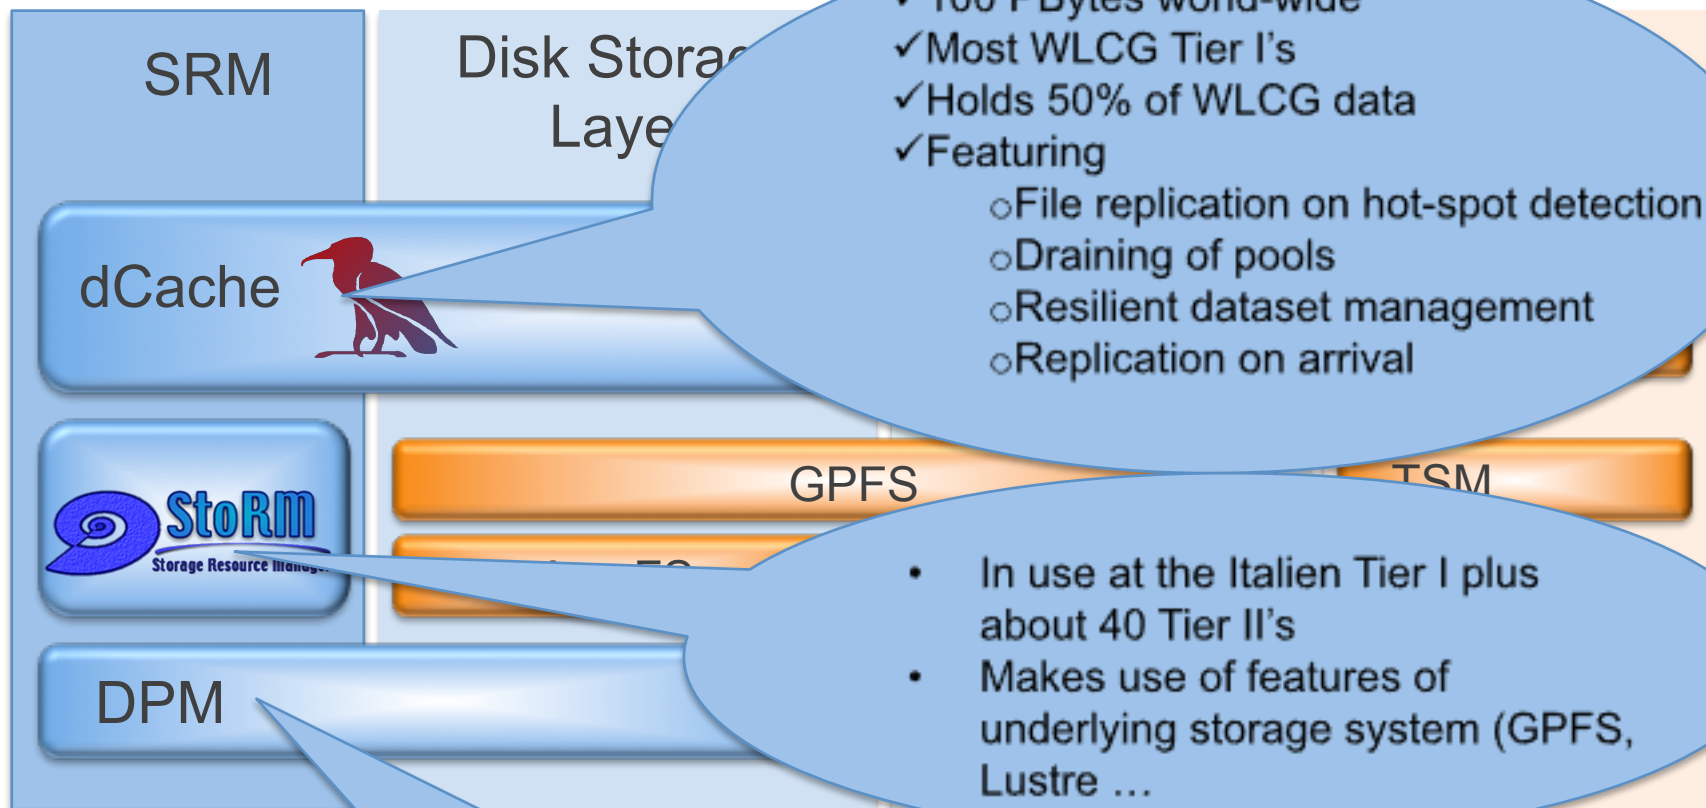

# EMI, the storage elements

# EMI, the storage elements

!!! Something for everyone

- ✓ Easy to install
- ✓ Very little maintenance
- ✓ Majority of WLCG sites

# The Mission

## EMI Data mission

EMI INFO-RI-261611

July 6, 2011

EMI Data, superB, Ferrara, IT

17

# The Mission

- Fixing of issues based on the experience of operating the infrastructures for some years.
- Improving or creating interoperability between components and middle-wares.
- Reducing components by merging functionality or removing duplication.
- Applying standards where available
- Standardizing EMI-Data mechanisms with “standardization bodies” e.g. OGF
- EGI : Attracting resp. enabling new communities.
- **Becoming competitive and attractive by :**
  - Standards
  - Professional Support
  - Strict quality monitoring

# Some more examples

- Defining (with OGF) and implementing an **Storage Accounting Record**
- Migrating the security of the Storage Resource Manager protocol from GSI (httpg) to **standard SSL/X509**.
- Migrating to next version of the information provider schema GLUE2.0
- Improving **the File Transfer Service** by integrating the load of the network and the storage element backend.
- For the entire list, have a look at :
  - <https://twiki.cern.ch/twiki/bin/view/EMI/EmiJra1T3Data>

# Selected Topics

EMI, some selected topics

EMI INFO-RI-261611

July 6, 2011

EMI Data, superB, Ferrara, IT

20

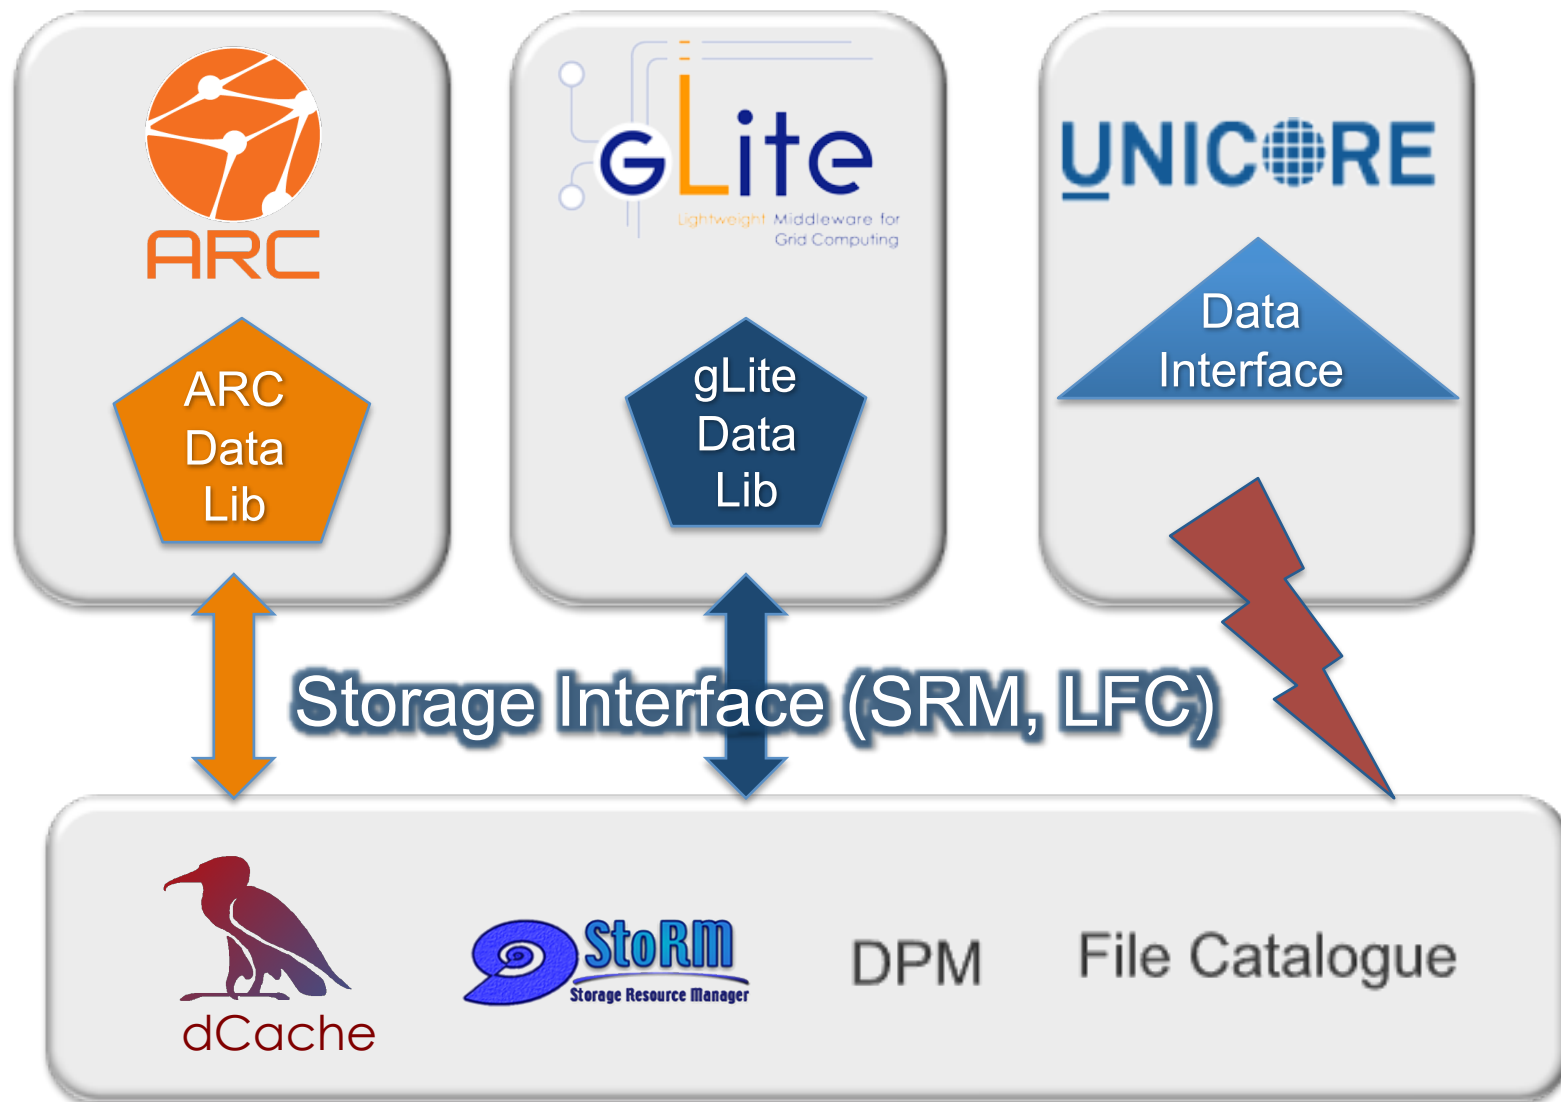

# Topic 1

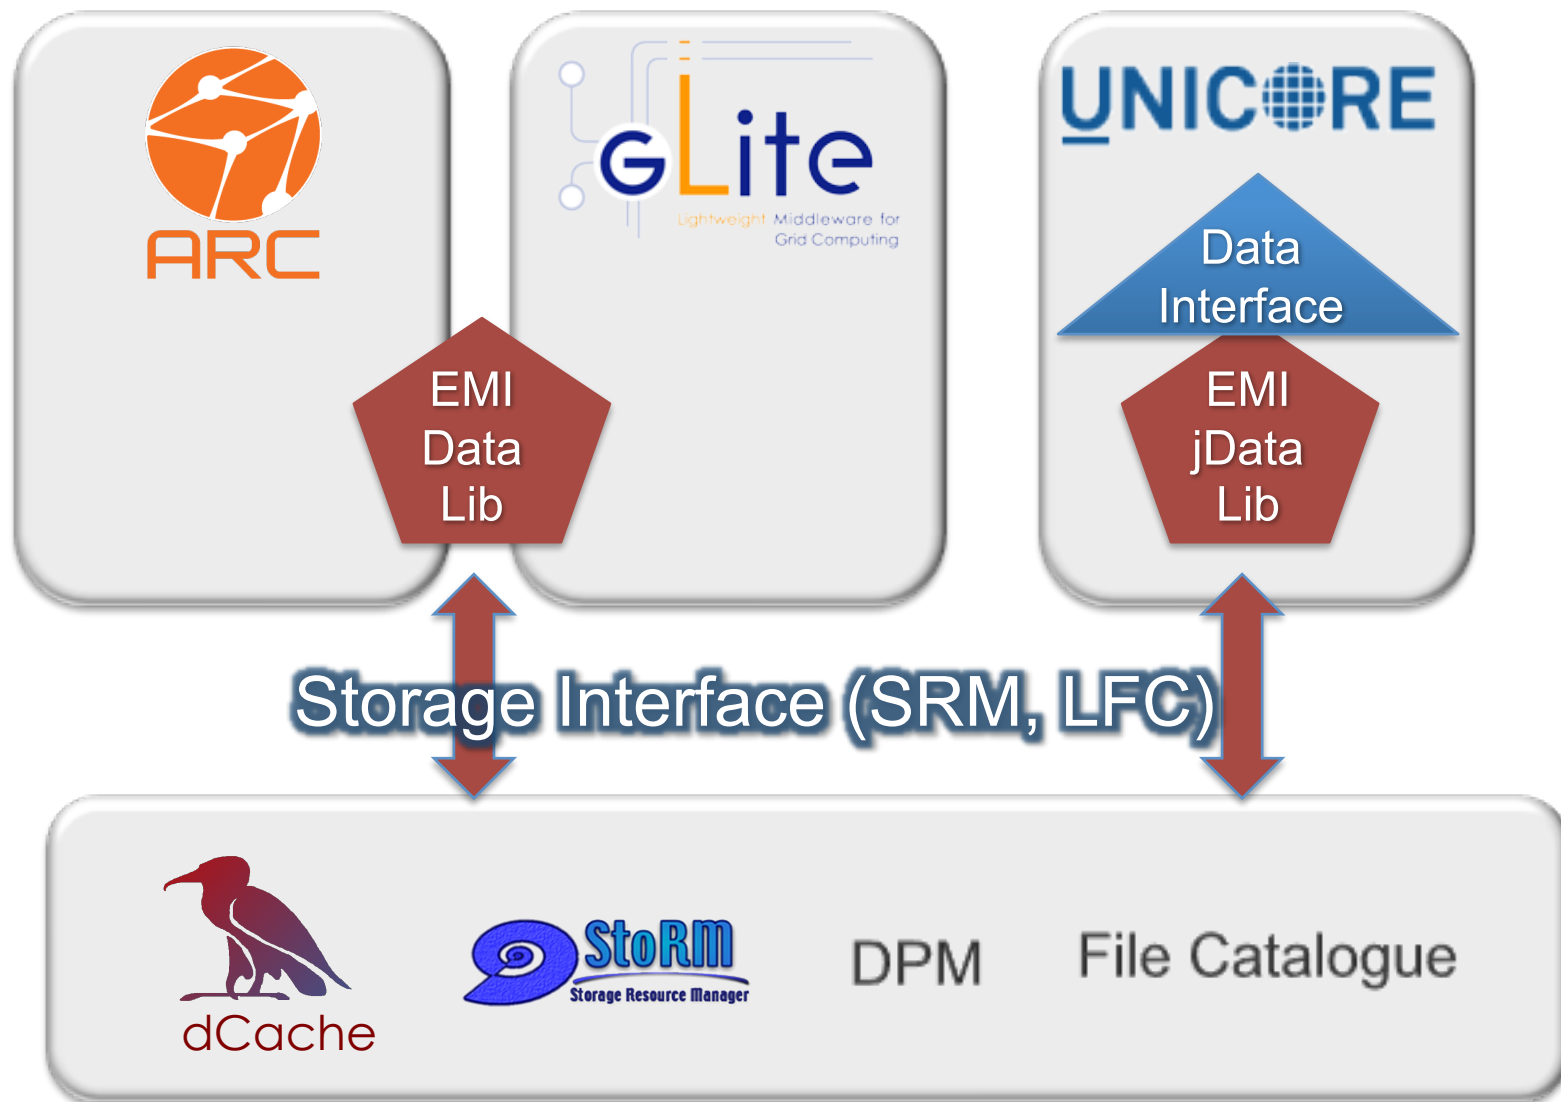

## Client library consolidation

# Component consolidation

# Component consolidation

## Topic 2

# Catalogue / Storage element synchronization

# Catalogue and Storage Elements

## Problem

- Storage Elements are storing the actual data locally.
- Catalogues map logical filenames to actual locations URLs.
- Typical store operation :
  - Store file in SE
  - Add entry (URL) to the catalogue under the logical file name
- May possibilities for SE's and catalogues to get out of sync as the store and 'add entry' operations are not transactional in WLCG.
- This results in
  - Dark data (files in SE but not in catalogue)
  - Dangling references (Pointer in catalogue, pointing into the void)
- Over time, catalogues and SE's diverge more and more.

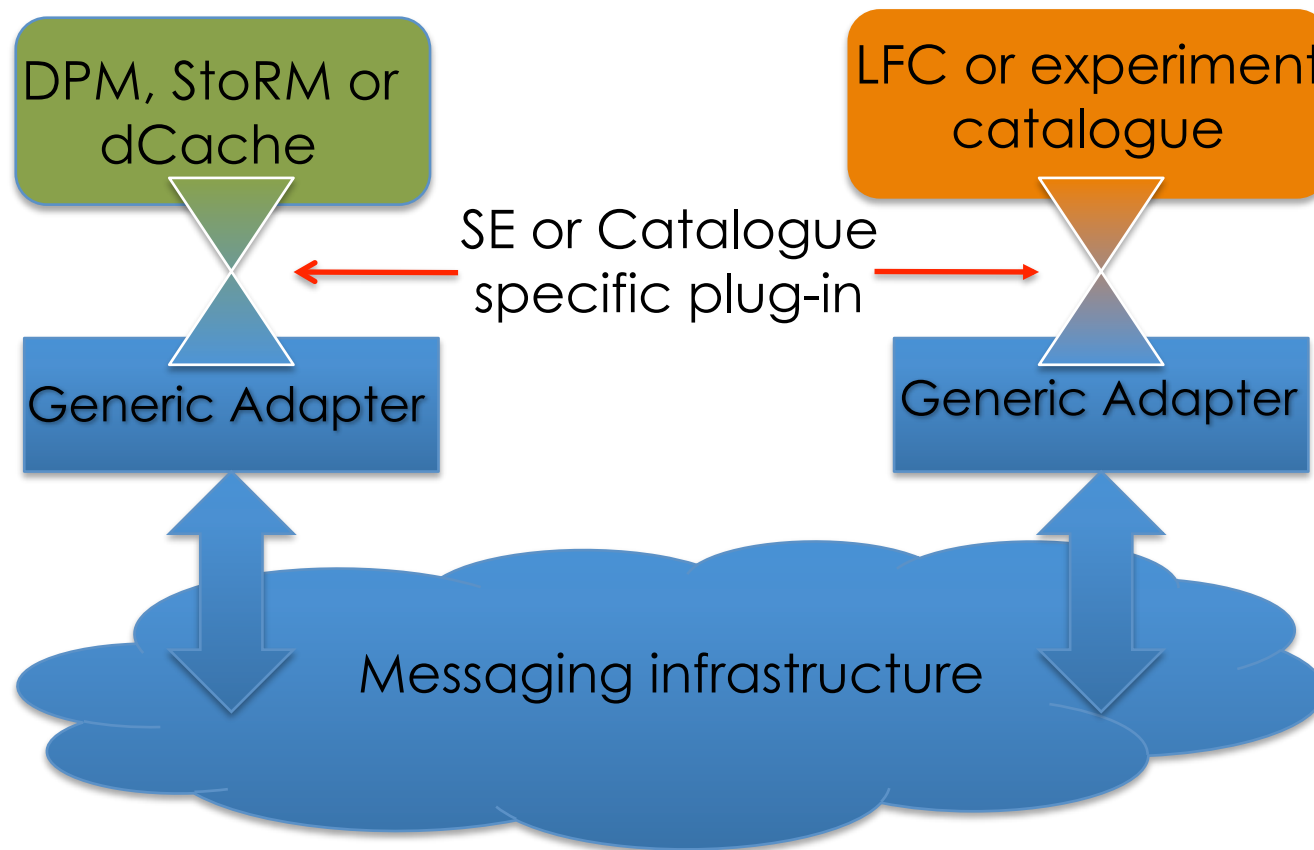

# How to solve this issue

Two different approaches

# Two possible solutions

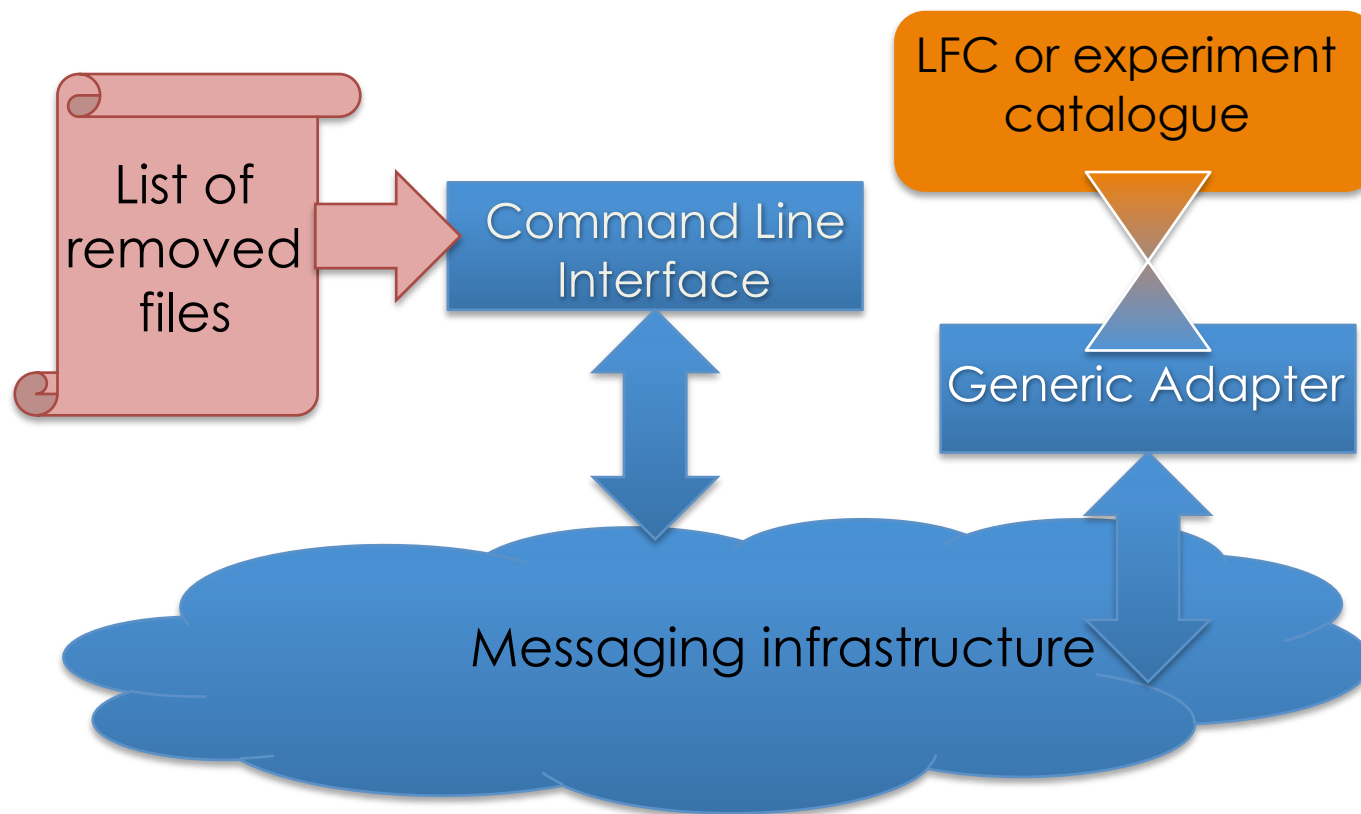

Synchronizing catalogues and SE's  
using message passing

Talk to Fabrizio on details.

# Already in EMI-1

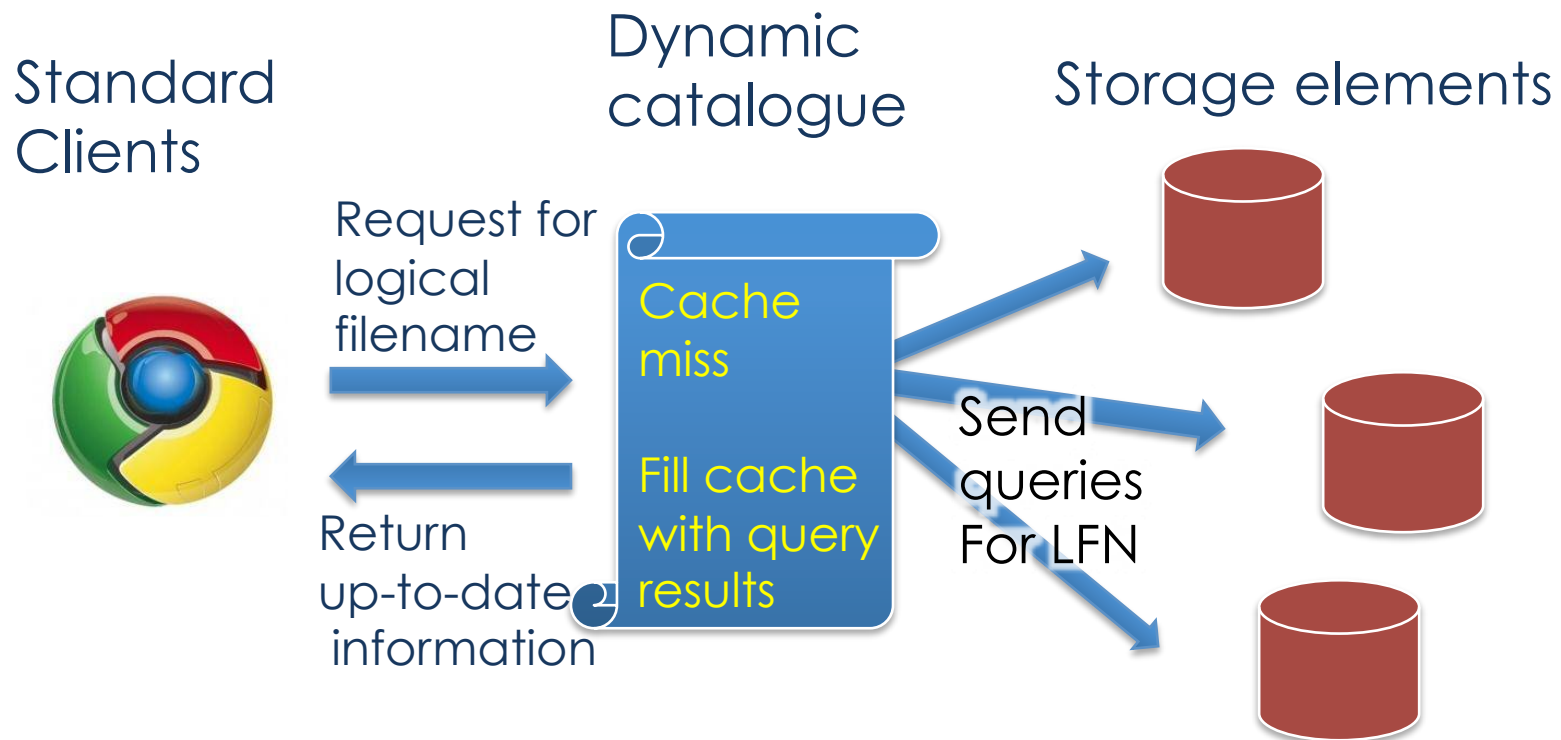

## Manual interaction

# Second approach (in discussion)

## Dynamic location catalogues

The catalogue, on request, builds a list of URLs for logical filenames. The URLs automatically invalidate after some time (hours).

# Example on how EMI works

Synchronizing catalogues and SE's guaranties continuity of production environment.

Dynamic catalogues is part of the data management evolution.

# Selected topics

## Topic 3

### Standards

WebDAV  
NFS 4.1 / pNFS

# Standardization

Applying industry standards

Standards are the key for sustainability of  
Open Source Projects

# Selected Topics

Example 1

WebDAV

# Standardization : WebDAV

## WebDAV (for data access)

- Very useful for new (non-LHC) communities.
- IETF Standard
- Allows “File system like” access with
  - Mac OS
  - Linux
  - Windows

webdav.dcache.org

Connected as: WebDAV

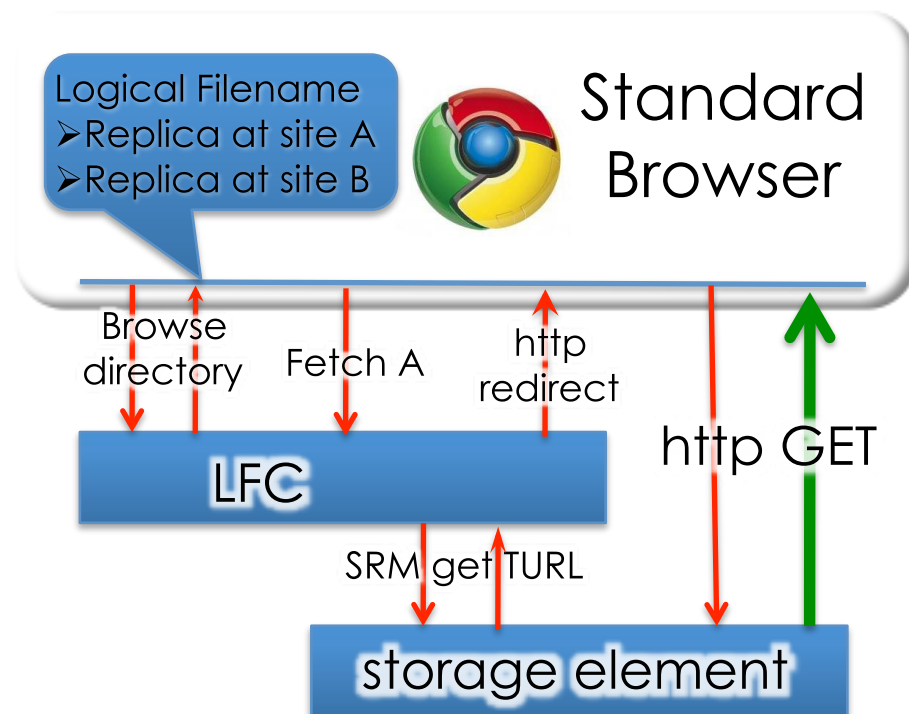

Disconnect

With EMI-2 (mostly already with EMI-1) we provide WebDAV support from our SE's

# Standardization : WebDAV

## WebDAV (for data browsing)

On request of the Irish Grid community EMI evaluates a WebDAV front-end for the file location catalogue.

# Selected Topics

## Example 2

NFS v4.1 / pNFS

# What's NFSv4.1/pNFS ?

center for  
information  
technology  
integration

CITI, at the University of Michigan, is funded by major storage providers to coordinate the pNFS effort and provide reference implementations.

## Industry Support - Implementations

### ● Clients

- Linux
- Sun (Solaris)

### ● Servers

- Desy
- EMC
- IBM
- Linux
- NetApp
- Panasas
- Sun (Solaris)

**Several other implementations have been tested at Bake-a-thons and Connectathons**

Group meets three times a year to check interoperability.

# What is NFS4.1/pNFS and how does it work ?

Stolen from :  
<http://www.pnfs.com/>

# Why would one need it ?

Stolen from :  
<http://www.pnfs.com/>

## Benefits of Parallel I/O

- ✓ Delivers Very High Application Performance
- ✓ Allows for Massive Scalability without diminished performance

## Benefits of NFS (or most any standard)

- Ensures Interoperability among vendor solutions
- Allows Choice of best-of-breed products
- Eliminates Risks of deploying proprietary technology

# Why would we need it ?

## Simplicity

- ✓ Regular mount-point and real POSIX I/O
- ✓ Can be used by unmodified applications (e.g. Mathematica..)
- ✓ Data client provided by the OS vendor
- ✓ Smart caching (block caching) development done by OS vendors

## Performance

- ✓ **p**NFS : parallel NFS (first version of NFS which support multiple data servers)
- ✓ Clever protocols , e.g. Compound Requests

# NFS v4.1 / pNFS availability

- ✓ EMI server
  - dCache : production version with EMI 1
  - DPM : prototype, ready for EMI-2
- ✓ Linux Kernel
  - Completed in 2.6.39
  - Back-port of pNFS into RH 6.2
- ✓ Industry
  - NetApp OnTab 8.1
  - Blue Arc in August
  - Other vendors : code ready but not officially available

# Testing and deployment

- NFS 4.1 / pNFS tested for more than 9 month at the DESY GridLab (50% Tier II).
- Stable and performing well.
- First production dCache NFS 4.1 / pNFS system at DESY for photon science.
- Other WLCG sites including Tier I's start with testing NFS 4.1 / pNFS.

# Competition

NFS 4.1 / pNFS is a great opportunity for Open Source Projects (EMI) to compete with industry and of course the other way around.

# Conclusions

- *EMI Data* is a good opportunity to get our storage management middleware into a maintainable shape and at the same time provides a platform for evolution.
- Standardization is the way to get broader acceptance by other communities, which is especially important for EGI.
- EMI-Data will become THE competitor in Storage Management in Europe 😊.
- Everybody can join or may provide suggestions through EGI.eu.
