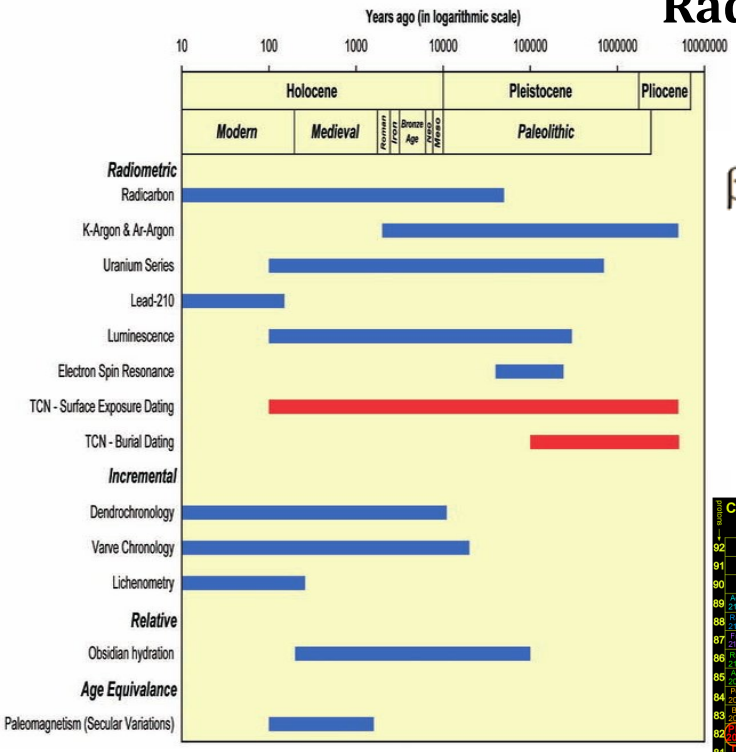
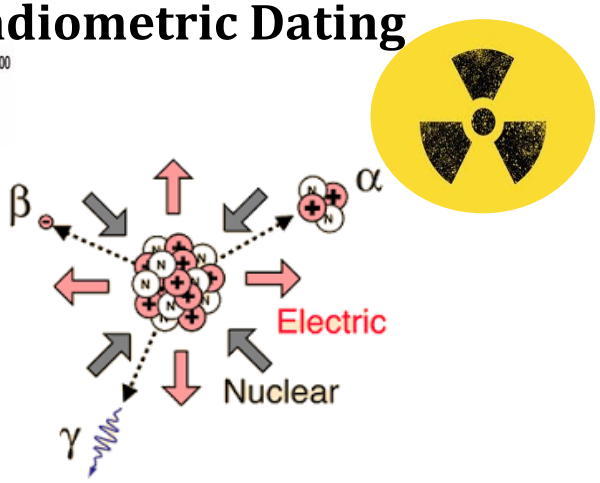
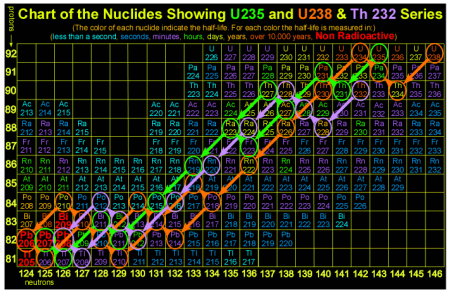
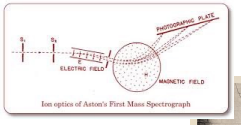
Radiometric Dating

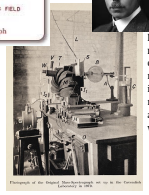
Radiometric Dating



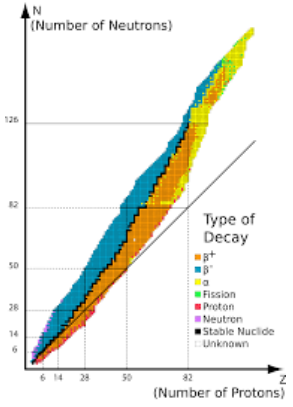




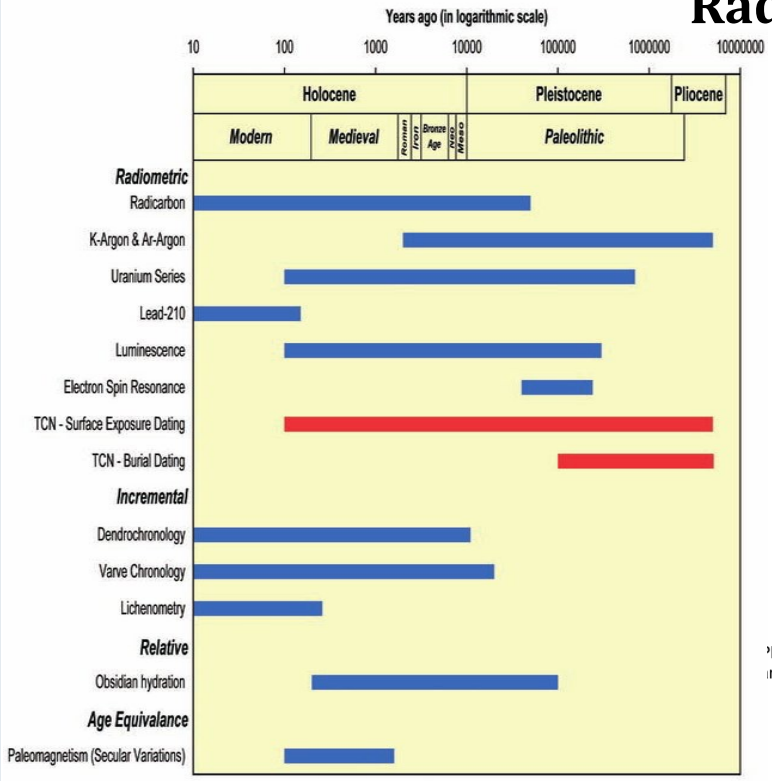


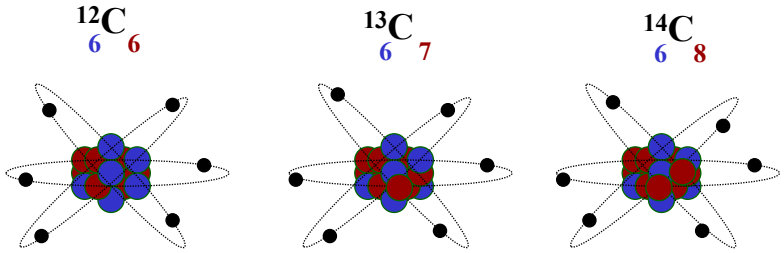


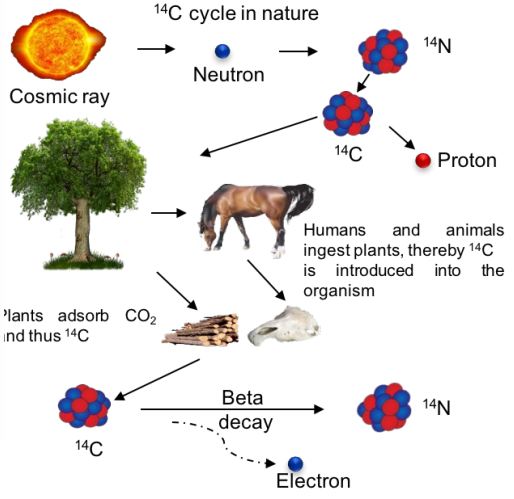
NOBEL (1922) Prize motivation: "for his discovery, by means of his mass spectrograph, of isotopes, in a large number of non-radioactive elements, and for his enunciation of the whole-number rule"

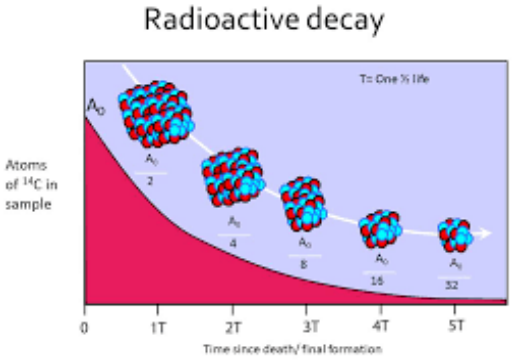


Radiocarbon Dating









^{14}C Dating

HISTORY OF RADIOCARBON DATING W. F. LIBBY

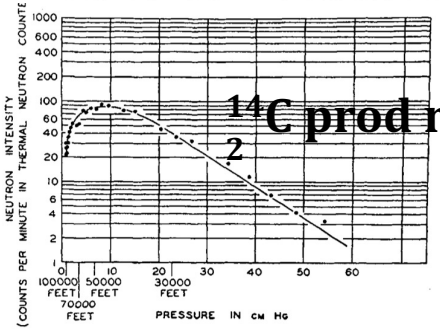
Fermi and Rome Group calculated that ^{14}N thermal neutron cross section was surprisingly high: 1.7 b predicting the presence of ^{14}C:

$$n + {}^{14}N = {}^{1}H + {}^{14}C$$

Ruben and Kamen produced and detected ^{14}C according to the reaction:

$$^{2}H + {}^{13}C = {}^{14}C + {}^{1}H$$

RUBEN, S., KAMEN, M. D., Phys. Rev. 57 (1940) 549; and ibid 58 (1940) 194.



^{14}C prod rate=2 atoms*s^{-1}*cm^{-2}

Mass Spectrometry

- 1906 : Thomson received the Nobel Prize for his work on electrons and later firstly discovered Ne isotopes with Aston.
- 1922 : Aston received the Nobel Prize for the discovery of 212 of the naturally occurring isotopes;
- 1930's : Urey developed the theory of isotope geochemistry and received the Nobel Prize for the discovery of Deuterium
- 1940's : Nier developed the first IRMS, a double-focusing double inlet MS

MATTER

Ancient DNA Shows Humans Settled Caribbean in 2 Distinct Waves

Millions of people living on the islands today inherited genes from the people who made them home before Europeans arrived.

«Così si è formata la gente dei Caraibi» Due docenti alla scoperta delle origini

Terrasi e Marzaioli (sotto) hanno condotto una indagine sui Caraibi

ALLA VANVITELLI

Enzo Battarra

La fisica e la matematica unite per capire le origini delle popolazioni. È quanto hanno fatto all'università Vanvitelli Fabio Marzaioli, professore associato di Fisica Applicata, e Filippo Terrasi, professore emerito presso il Dipartimento di Matematica e Fisica.

I risultati di un loro lavoro sono stati pubblicati su «Nature», una delle più antiche e importanti riviste scientifiche esistenti, forse in assoluto quella considerata di maggior prestigio nell'ambito della comunità scientifica internazionale. Giunge così un'altra notevole soddisfazione per l'ateneo casertano.

I due docenti che fanno ricerca all'ombra della Reggia sono inseriti in un team internazionale di genetisti, archeologi, antropologi, curatori di musei e fisici.

Questo gruppo ha condotto il più ampio studio finora effettuato sul Dna. Il team ha fatto luce sulla storia e sulla preistoria dei Caraibi. Utilizzando un nuovo metodo, gli scienziati confermano che le popolazioni dei Caraibi hanno origini indigene e che quindi provengono da popolazioni antecedenti al contatto con gli europei.
