

Skymion tunneling and merger based OR gate

Young Researchers' Workshop, XXI LNF "Bruno Touschek" Spring School

Parmest Roy

Exchange student at Sapienza University of Rome

Undergraduate Researcher, Spintronics Group, Shiv Nadar Institute of Eminence

Spintronics

It is a field of physics that utilises the orientation of intrinsic spin of electrons, in addition to their charge, for information storage and processing.

Magnetic skyrmions

Skyrmion is a topologically stable vortex like configuration of magnetisation vectors

Why do we care about them?

We can build logic gates based on skyrmions

OR gate

Input		Output
A	B	Y
0	0	0
0	1	1
1	0	1
1	1	1

Landau Lifshitz Gilbert Equation:

$$\partial \mathbf{M} / \partial t = -\gamma (\mathbf{M} \times \mathbf{H}_{\text{eff}}) + \alpha / M_s (\mathbf{M} \times \partial \mathbf{M} / \partial t) + \boldsymbol{\tau}_{\text{CPP}}$$

$$\boldsymbol{\tau}_{\text{CPP}} = -\beta \boldsymbol{\epsilon}' (\mathbf{M} \times \mathbf{m}_P) - \beta/M_s [\mathbf{M} \times (\mathbf{m}_p \times \mathbf{M})]$$

$$\beta = \theta_{SH} \hbar J / 2M_s e t_{Co,track}$$

Establishing the track:

Material parameters:

Material parameters: multilayer Pt/Co strip

Material parameters: multilayer Pt/Co strip

```
// Setting up the free layer  
  
// saturation magnetization  
Msat = 580e3  
  
// exchange stiffness  
Aex = 15e-12
```

Material parameters: multilayer Pt/Co strip

```
// Gilbert damping coefficient
alpha = 0.1

// DMI constant
Dind = 3e-3

// magnetocrystalline anisotropy constants
anis_u = vector(0, 0, 1)
Ku1 = 6e5
Ku2 = 1.5e5

Temp = 0

m = Uniform(0,0,1)
```

Setting up parameters for skyrmion propulsion:

```
B_ext = vector(0, 0, 0)
```

```
lambda      = 1
```

```
Pol         = 1
```

```
epsilonprime = 0
```

```
xi = 0.35
```

```
DisableZhangLiTorque=False
```

```
DisableSlonczewskiTorque=False
```

```
fixedlayer = vector(0, 1, 0)
```

```
|  
jz := 9e10 // current density in A/m2
```

```
J = vector(0, 0, -jz)
```

Skyrmion tunneling

Skyrmion tunneling refers to the process where a skyrmion, a stable, localized knot of magnetic moment in a magnetic material, transitions between different energy states or positions within a material.

Skyrmion merger

Skyrmion merger refers to the process where two or more skyrmions - which are topologically protected magnetic textures with particle-like properties - combine to form a single entity.

Gate structure:

Input channel

Output channel

A

OR

B

Results:

Case $A=0, B=0$

Case $A=1, B=0$

Case $A=0, B=1$

Case $A=1, B=1$

All truth values successfully achieved for OR gate.

Conclusion

By capitalising on the rich physics of skyrmions, we have created a skyrmion tunnelling and merger based OR gate which is structurally simple and satisfies all truth values.

We plan on creating more logic gates in future with this approach.

Acknowledgement

I convey my sincere thanks and gratitude to my supervisor Dr. Sucheta Mondal for offering me her unparalleled support, time and guidance during the entire duration of this project.

I also thank the Department of Physics, Shiv Nadar Institute of Eminence for generously funding this project under the Opportunities for Undergraduate Research (OUR) scheme.
