## Approaching the Quantum Limit in Axion Detection at IBS/CAPP

*Tuesday, 17 September 2024 15:35 (20 minutes)*

In the presentation, we will detail our five-year work at the Center for Axion and Precision Physics Research (CAPP) in developing and optimizing quantum-noise-limited amplifiers based on flux-driven Josephson Parametric Amplifiers (JPAs) for axion detection experiments. Our research focuses on achieving the lowest noise performance to enhance the scanning speed for detecting potential axion signals in the 1-6 GHz frequency range. We developed a split-band technique for JPAs, extending the effective bandwidth of the 1-2 GHz amplifiers up to 300 MHz while maintaining noise characteristics. We will discuss the technical challenges, implemented solutions, details of the readout systems, and future prospects for this technology.

**Primary author:** UCHAIKIN, Sergey (Institute for Basic Science, Center for Axion and Precision Physics Research)

**Co-authors:** IVANOV, Boris (Center for Axion and Precision Physics Research of Institute for Basic Science); Mr KIM, Jinmyeong (Department of Physics, KAIST); Dr VAN LOO, Arjan F. (RIKEN Center for Quantum Computing (RQC); Department of Applied Physics, Graduate School of Engineering, The University of Tokyo); Prof. NAKAMURA, Yasunobu (RIKEN Center for Quantum Computing (RQC); Department of Applied Physics, Graduate School of Engineering, The University of Tokyo); Dr AHN, Saebyeok (Institute for Basic Science, Center for Axion and Precision Physics Research); Mrs OH, Seonjeong (Institute for Basic Science, Center for Axion and Precision Physics Research); Mr KO, Minsu (Department of Physics, KAIST); SEMERTZIDIS, Yannis Kyriakos (KAIST/IBS)

**Presenter:** UCHAIKIN, Sergey (Institute for Basic Science, Center for Axion and Precision Physics Research)

**Session Classification:** Afternoon 2
