

CALO – SCD alignment

Pietro Betti
PS-SPS2023 analysis meeting 12/03/2024

Beam Profile cube 0

trck_ay+trck_by*719.3:trck_ax+trck_bx*719.3 (pow(10,trck_chi2)<10 && casisTime>80 && casisTime<620)

All

First cube > 10 MIP

Cube coordinates y: (-5, 25) mm

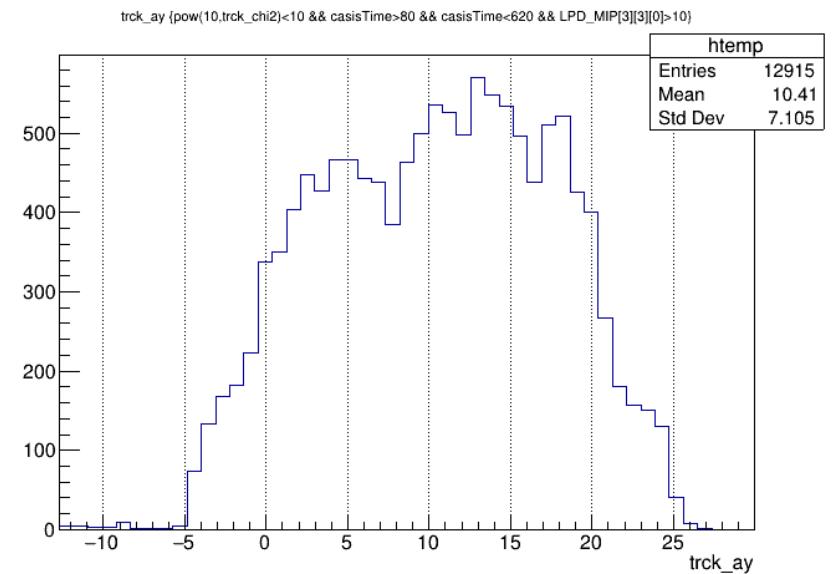

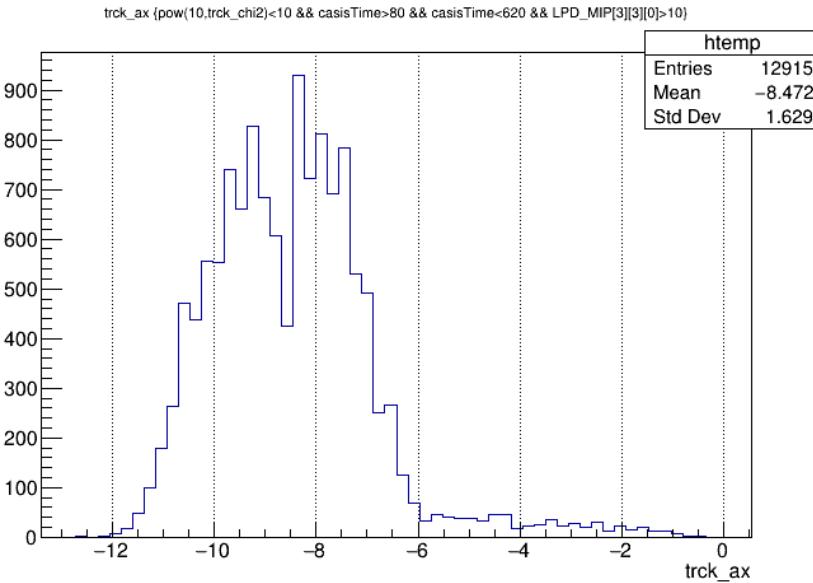

Cube center y: 10 mm

Beam narrow in x: no possible to delimit the cube

Beam coordinates x: (-12, -6) mm

Beam center x: -9 mm

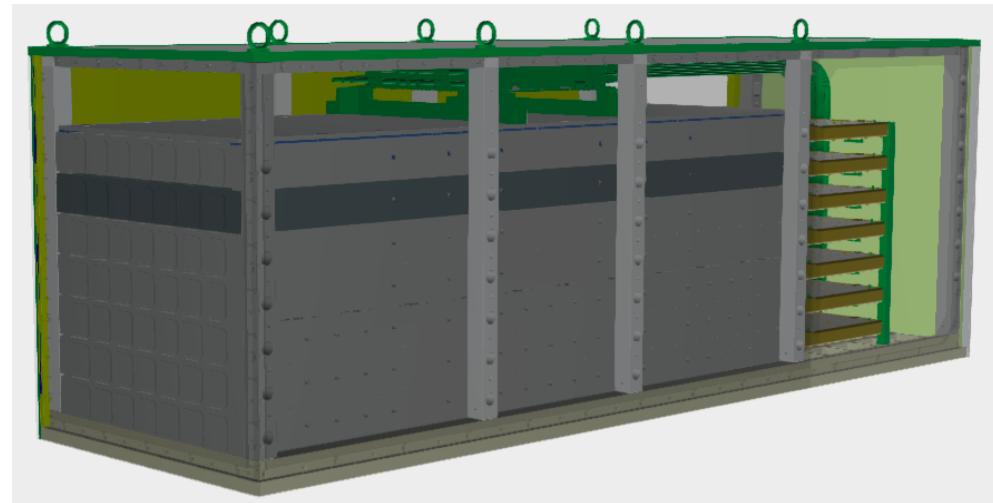

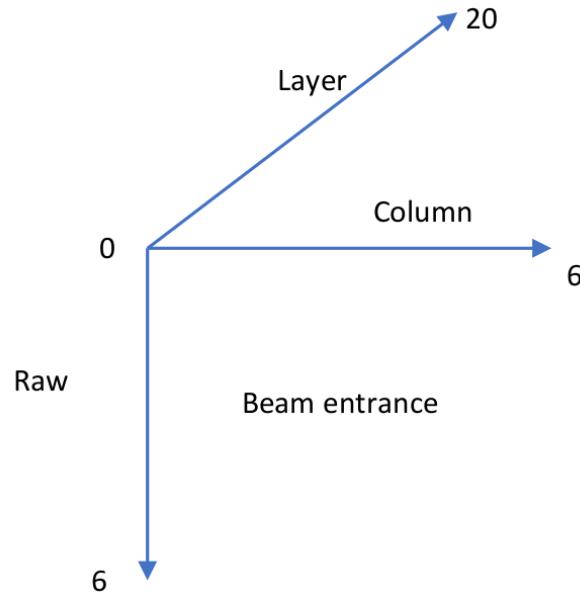

Beam Profile SCD

```
Tree->Draw("trck_ax","pow(10,trck_chi2)<10 && casisTime>80 && casisTime<620 && LPD_MIP[3][3][0]>10")
```

Method of Center of Gravity (CoG)

- Estimate the CoG of every layer of the calorimeter
- For alignment in x-direction

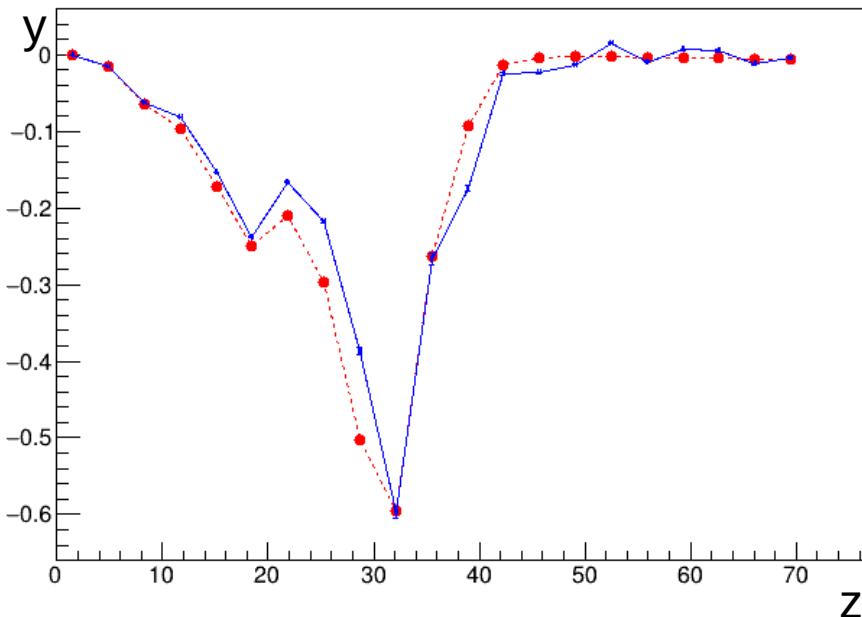

Run 302 250 GeV

i: crystals

j: coordinate

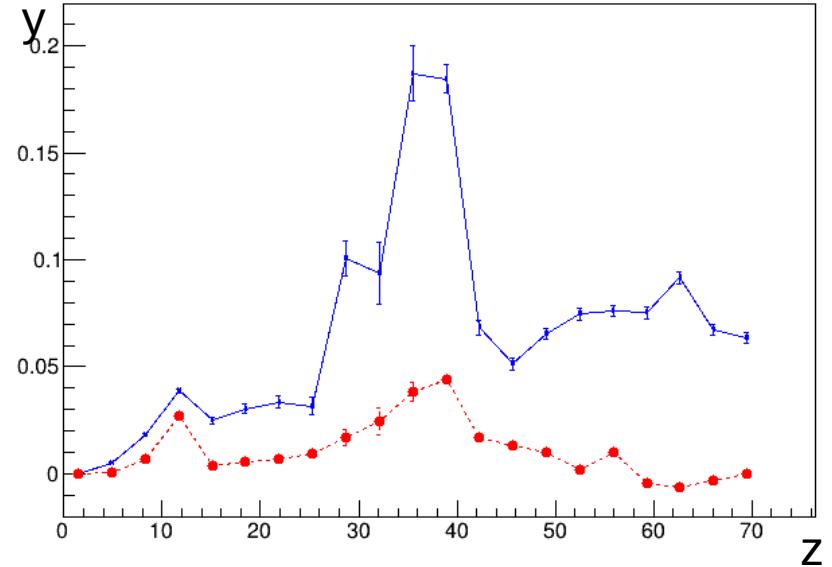

$$cog[j] = \frac{1}{E_{layer}} \cdot \sum_{crystals} E[i] \cdot x[j]$$

EDepXZGraph

Data

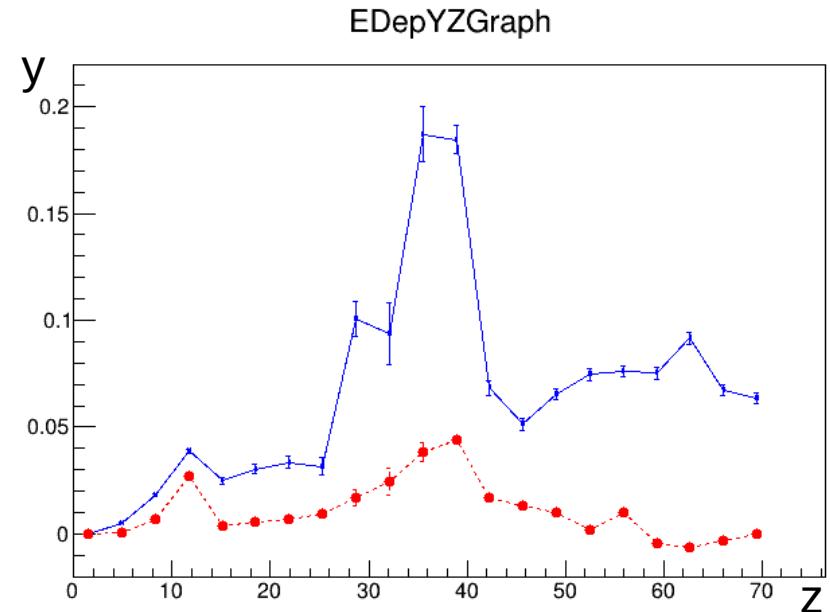

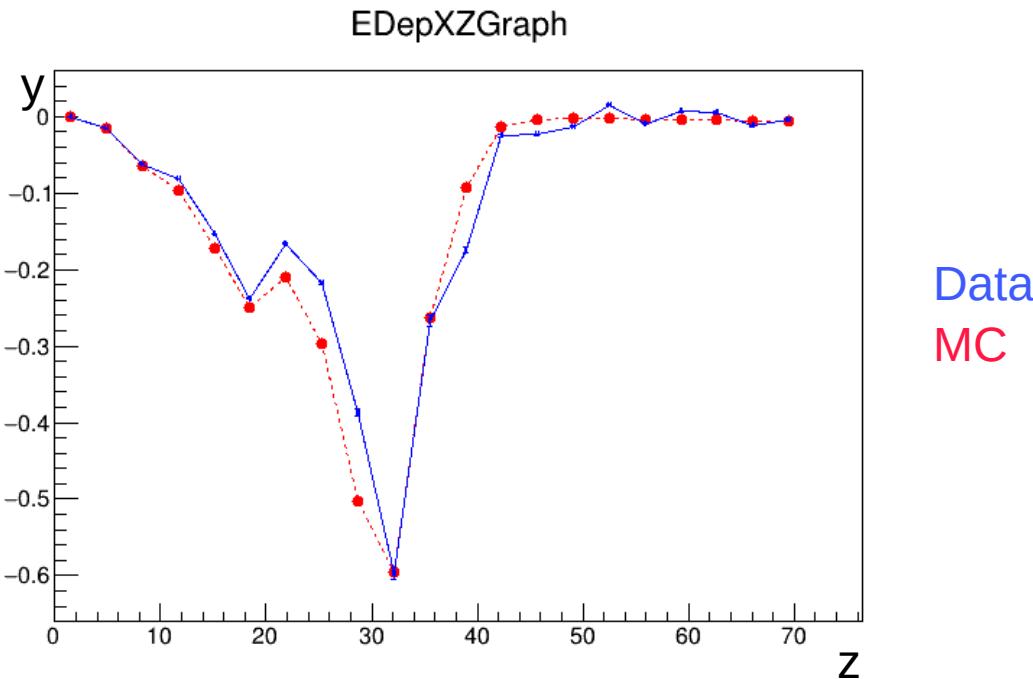

EDepYZGraph

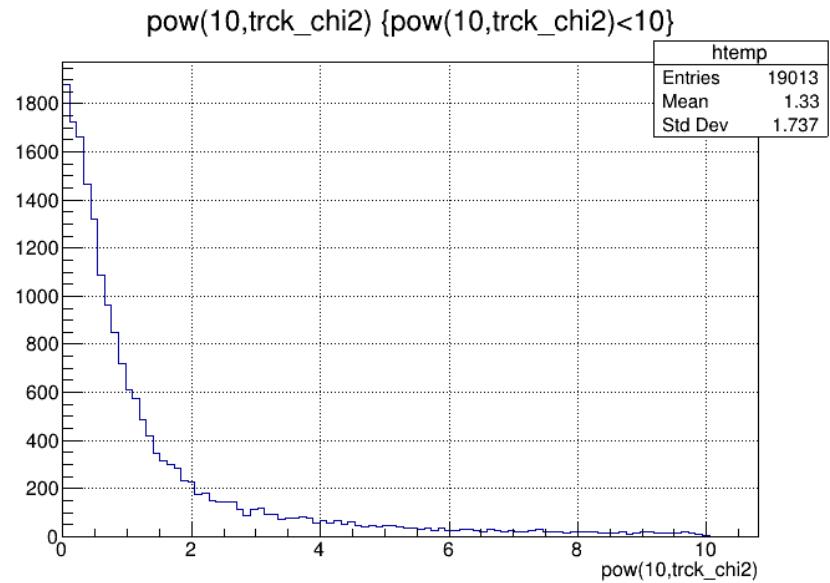

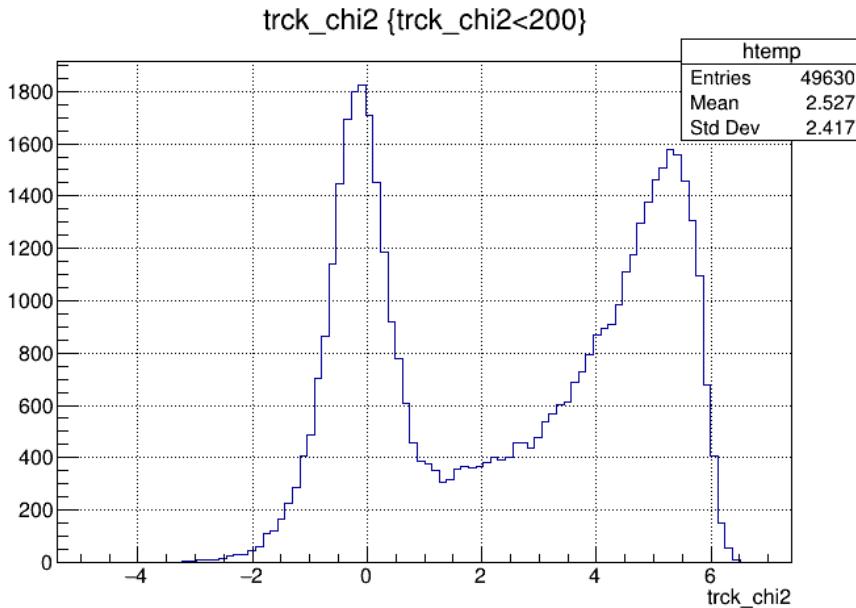

Simulations for COG

Simulations
Set xMin -0.65
Set xMax -0.15

SCD shifted to make data-MC CoG
compatibles with same acceptance cut

Digitization of the tracks

Tracs selection: $\text{chi2}/\text{ndf} < 10$

```

```

Track: $y = ay + by * z$
 $x = ax + bx * z$

Errors on: ay, ax, by, bx

Project MC tracks
on XZ and YZ
planes

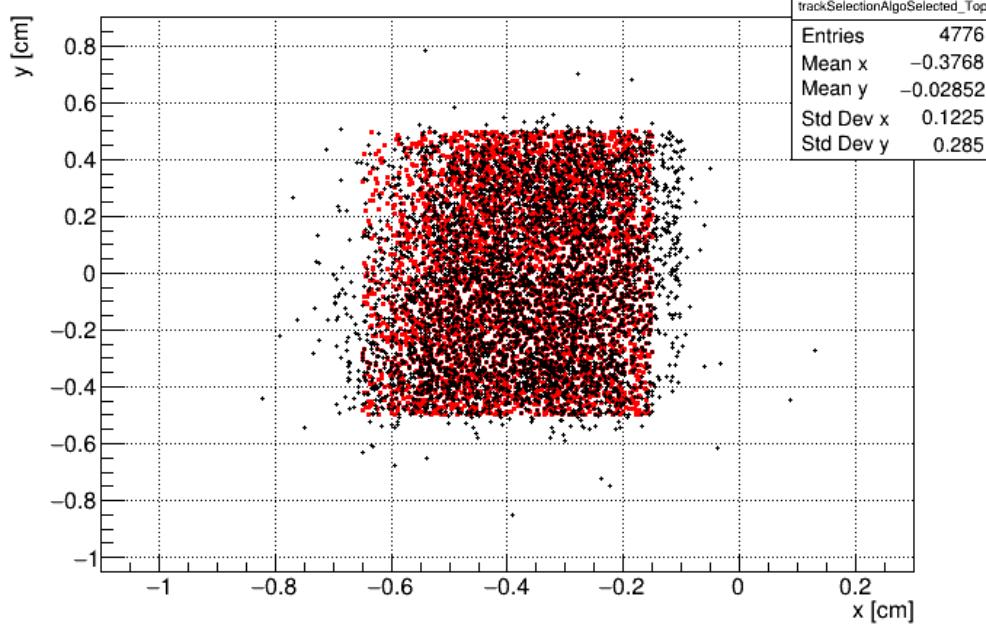

Smeared ax, ay, bx, by with
Gaussian centered on zero with
sigma equal to the associated
error

Rebuild a 3D track

Run 302 250 GeV
