Status of the EuPRAXIA@SPARC_LAB Technical Design Report-Part 1

C. Vaccarezza INFN-LNF

This project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement No. 101079773

- WP15:
 - D15.2 Mid-term report on TDR status for EuPRAXIA@SPARC_LAB
 - M15.2 Workshop on “EuPRAXIA@SPARC_LAB machine upgrade and additional beam lines” (moved from M20, June 2024)
- Technical Design Report General Overview & Contents
- Timeline update
- Some Chapters details:
 - Civil Infrastructures
 - Machine Layout
 - Beam Physics
 - RF X-band Linac
 - Plasma Module
 - FEL & Undulator
- Conclusions

TDR General Overview

Since February 2021 the preparation of the EuPRAXIA@SPARC_LAB Technical Design Report has been submitted to the Review Committee evaluation. The RC meets twice a year (May-Jun/Dec-Nov) till completion of the TDR document.

Current Review Committee Members:

- Deepa Angal-Kalinin (UKRI STFC, UK)
- Majed Chergui (EPFL, Switzerland)
- Patric Muggli (MPP, Germany, chair)
- Marco Pedrozzi (PSI, Switzerland)
- Luigi Scibile (CERN, Switzerland)

Editorial Board (July 2024) Members

- Massimo Ferrario
- Alessandro Gallo
- Anna Giribono
- Riccardo Pompili
- Fabio Villa

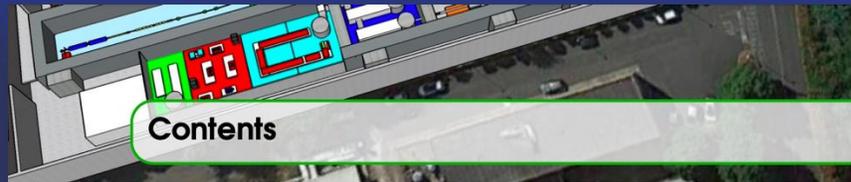

Istituto Nazionale di Fisica Nucleare

EuPRAXIA@SPARC_LAB

Technical Design Report

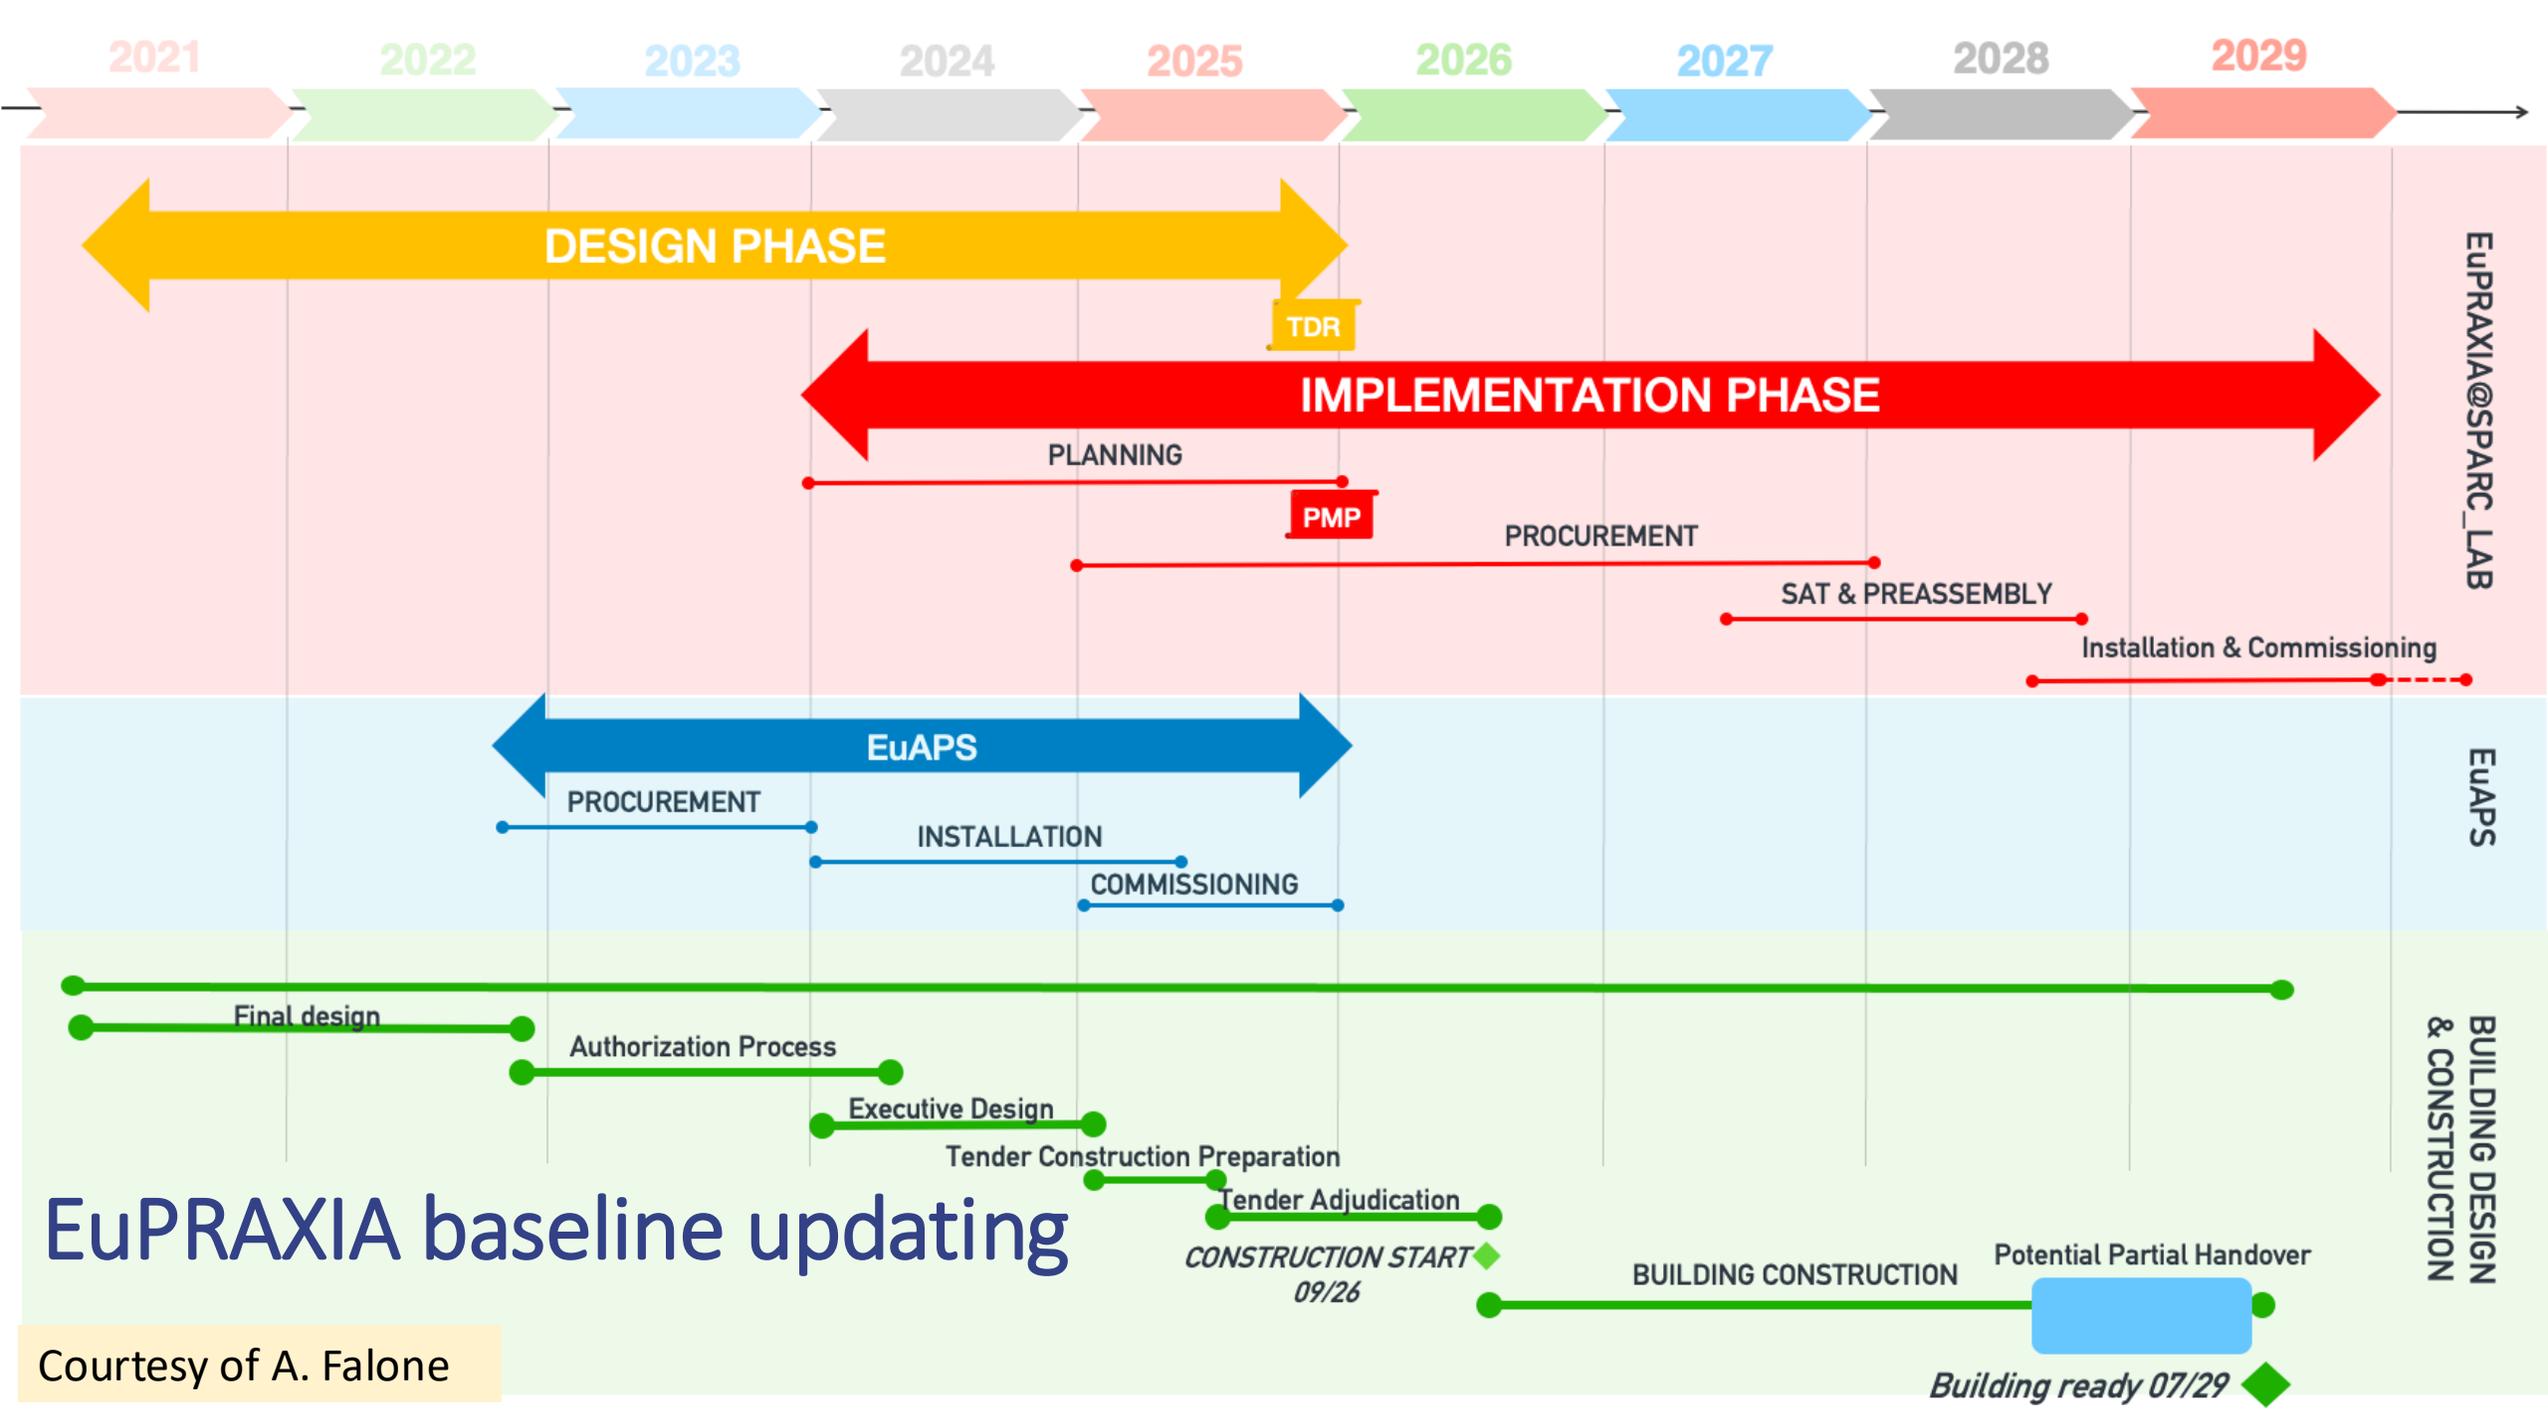

1	Executive Summary	9
2	EuPRAXIA in the European Context	11
3	EuPRAXIA@SPARC_LAB	13
4	Scientific Case	15
5	Beam Physics	17
6	Machine layout	19
7	RF Photo-Injector	21
8	RF X-band Linac and Compressor Systems	23
9	Plasma Accelerating Module	25
10	Free Electron Lasers	27
11	Photon Beamlines	29
12	Experimental End-stations	31
13	Electron and Photon Diagnostics	33
14	Laser System	35

27 Chapters now under redaction (around 30% ready).

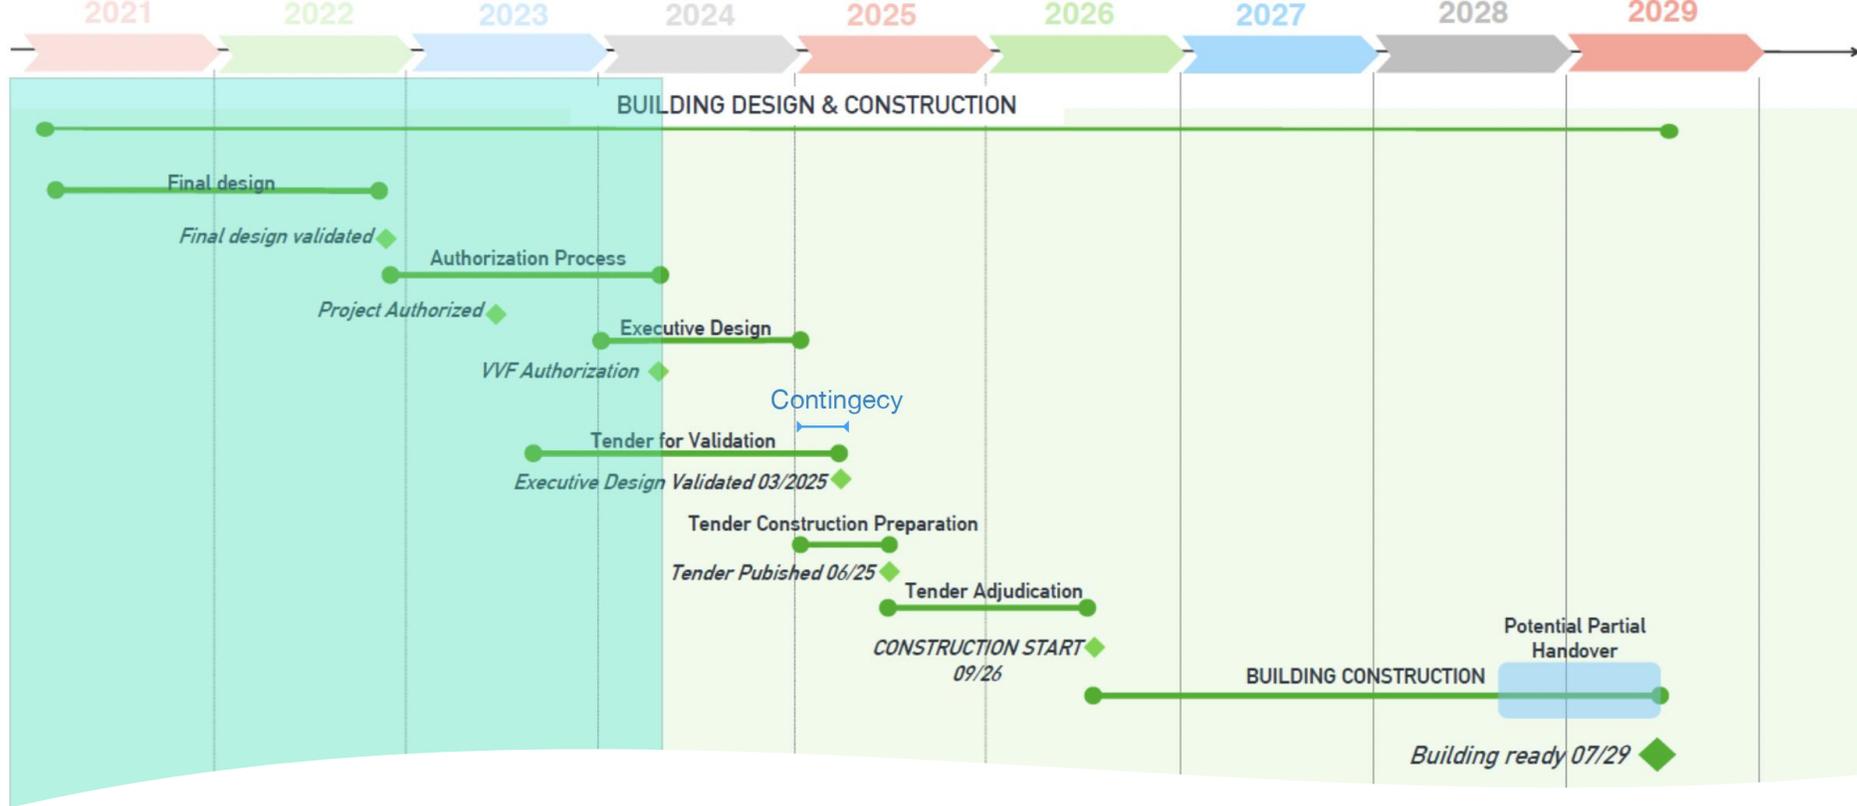

To be finalized by first half 2025.

15	RF Systems	37
16	Timing and Synchronisation	39
17	Control System	41
18	Vacuum System	43
19	Magnets and Power Supply	45
20	Functional Safety Systems	47
21	Civil Infrastructures	49
22	Conventional Safety	51
23	Radiation Safety and Beam Dumps	53
24	Integration, Implementation and Commissioning Strategy	55
25	System Engineering	57
26	Project Cost, Timeline and Management Structure	59
27	Future Upgrades	61

EuPRAXIA baseline updating

Facility building timeline details

- Executive Design almost completed
- Draft delivered in June 2024
- Authorization from Fire Brigade - approved.
- Tender for the verification on going to be awarded in September (3 months for the execution of the verification according to the contract).
- Tender for construction to be prepared starting from the end of the year.

Courtesy of S. Incremona

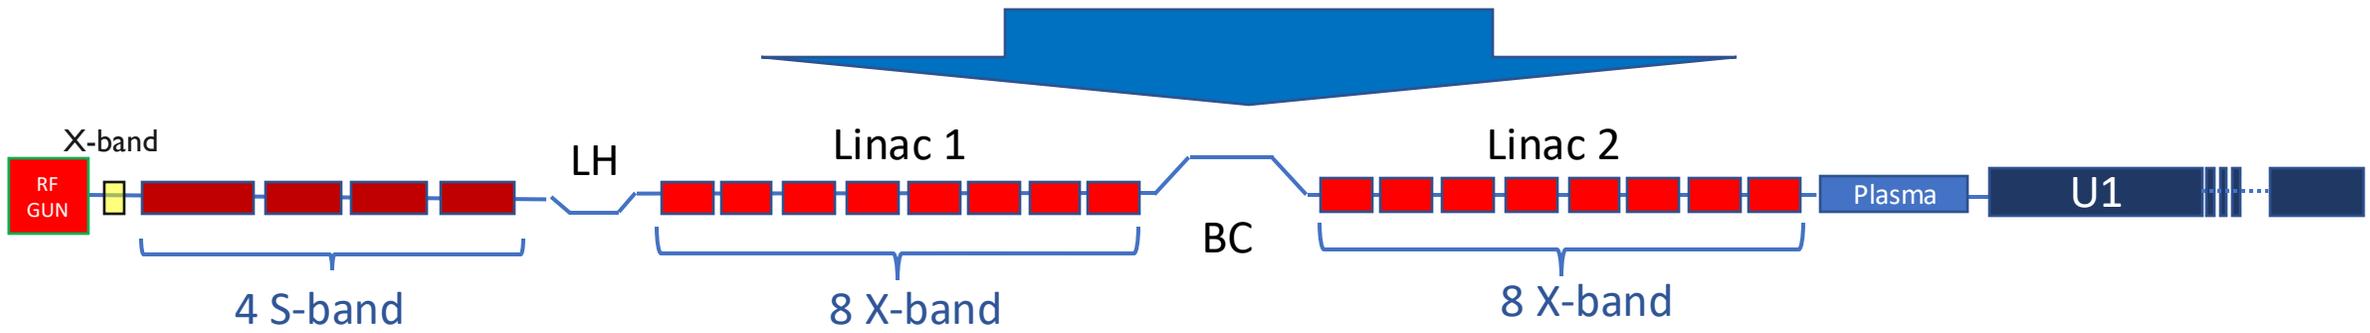

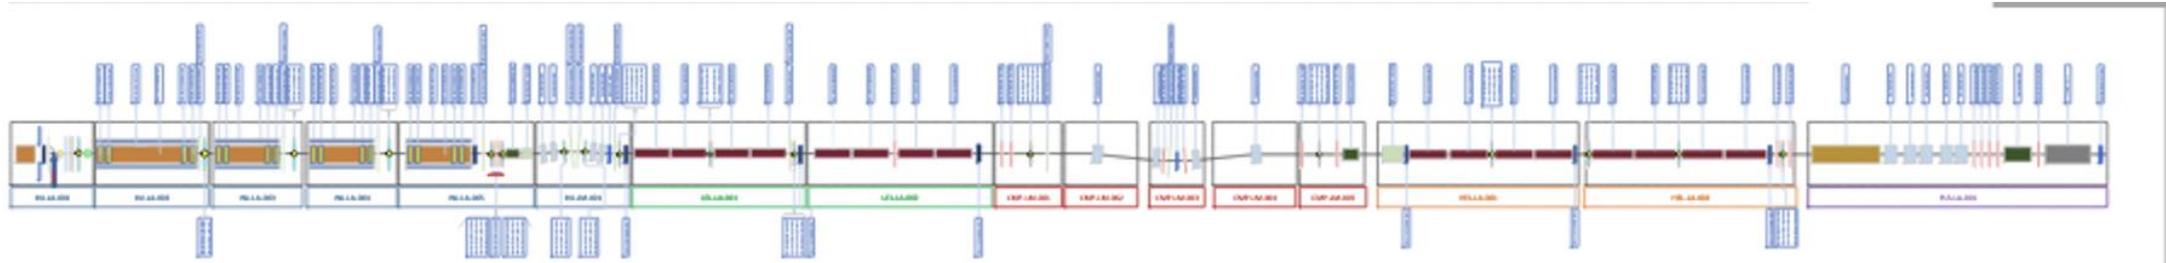

Machine&Undulator 3D layout

Courtesy of A. Ghigo

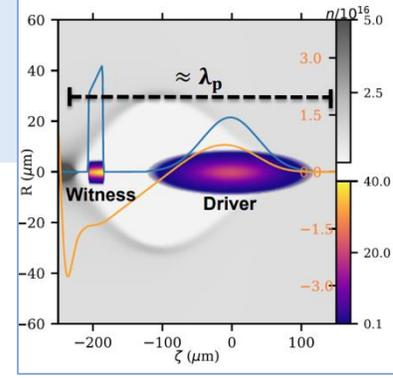

- Accelerator & undulator definition 70%
- Photon beam lines & end stations 30%
- Building functional area definition 90%
- Description of components 70%
- Mechanical drawing for tender request 20%

- Reference Plasma Working point:
 - $E = 1 \text{ GeV}$, $\lambda_r = 4 \text{ nm}$, $Q = 30 - 50 \text{ pC}$, Comb scheme w plasma module
- X-band Linac Working point
 - $E = 1 \text{ GeV}$, $\lambda_r = 4 \text{ nm}$, $Q = 250 \text{ pC}$, Single bunch

- **Baseline : Plasma acceleration operation scheme = WoP1**
- **Suitable for the High Charge Single Bunch operation boosted by an All-RF Linac up to 1 GeV = WoP2**

- Based on the FEL specifications, the reference working point has been determined by the plasma module
 - At least 500 MeV energy gain (in less than 1 m)
 - Weakly non-linear regime (bubble with resonant behaviour)

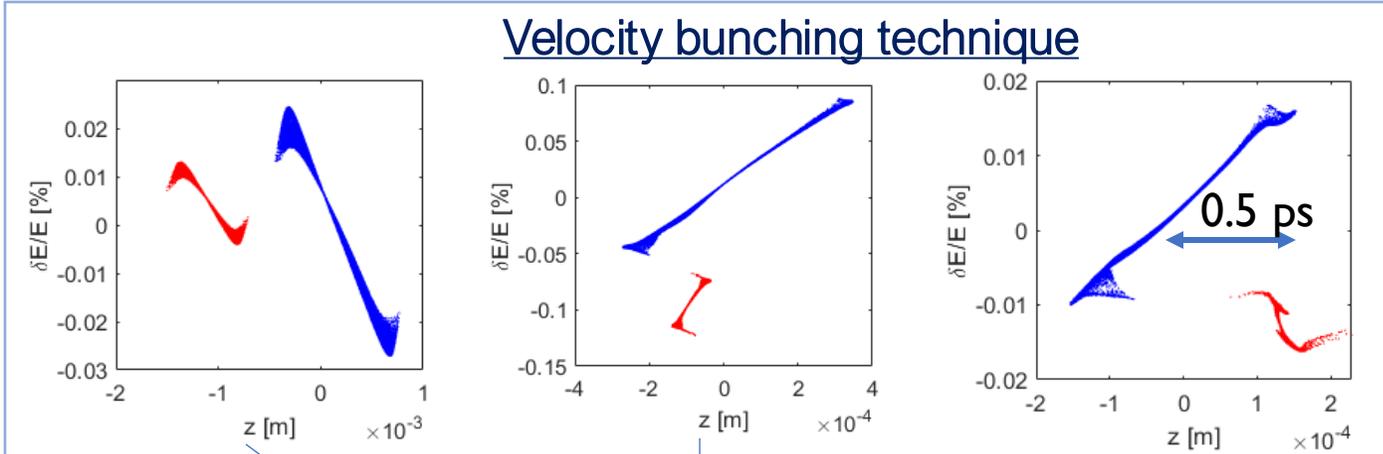

- 200 pC driver + 30 pC witness
- plasma density of the order of 10^{16}cm^{-3} ($\lambda_p = 334 \mu\text{m}$)

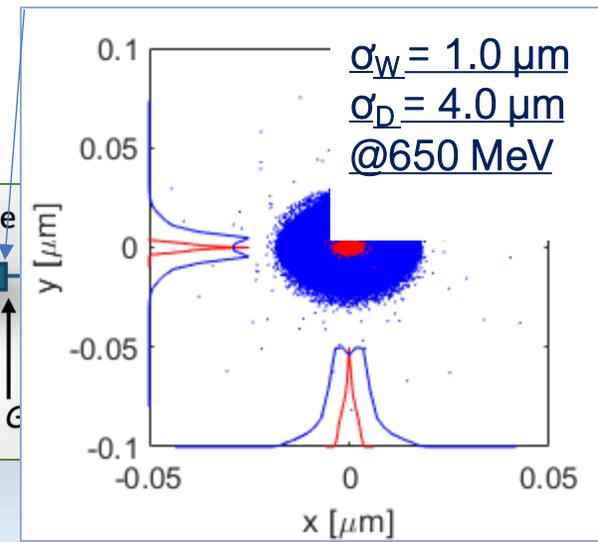

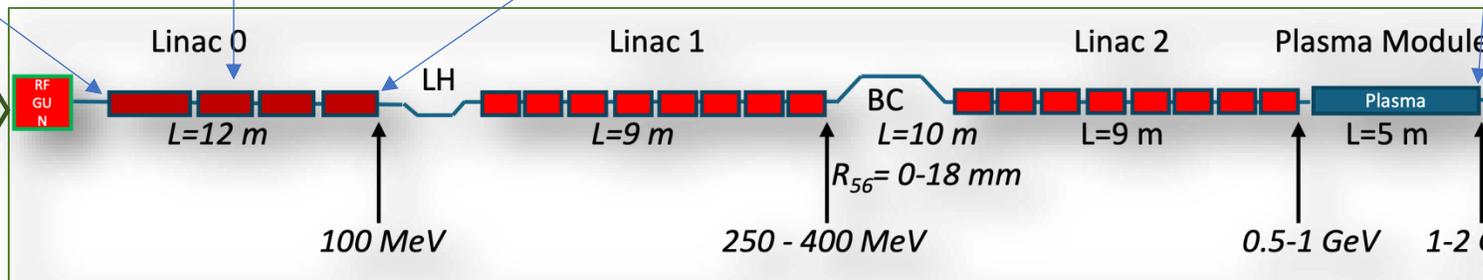

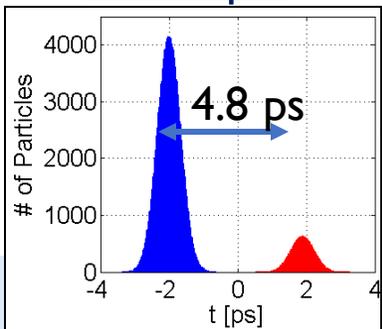

- Driver-witness separation of around 0.5 ps (i.e. $\lambda_p / 2$)
- Driver and witness bunches of 200 fs and 10 fs rms
- Driver and witness spot size of 4 and 1 μm with $\alpha=1$

Velocity bunching technique

Laser comb technique

- Driver and Witness beam are separated in a magnetic chicane downstream the plasma module.
- A short matching transfer line follows to inject the beam in the undulator

parameter	Units	
Charge before cut	pC	28.3
Charge after cut (a.c.)	pC	26.5
Peak current (a.c.)	kA	3
Emittance projected a.c. (x,y)	mm mrad	0.7
Emittance slice a.c. (x,y)	mm mrad	0.7
Energy spread a.c (relative)		1.7×10^{-3}
Energy spread slice a.c.		3×10^{-4}
Rho	$\times 10^{-3}$	1.6
Rho_3d	$\times 10^{-3}$	1.5
Energy emitted (25 m)	microJ	13.2
Photon emitted (25 m)	$\times 10^{11}$	2.5
Saturation length	m	20
Wavelength	nm	4
Bandwidth (25 m)	%	0.2
Size	micron	120
Divergence	microrad	19

end of 2023 data

RF Gun (rms)		
RF Voltage [ΔV]	± 0.02	%
RF Phase [$\Delta\phi$]	± 0.02	deg
S-band Accelerating Sections (rms)		
RF Voltage [ΔV]	± 0.02	%
RF Phase [$\Delta\phi$]	± 0.02	deg
X-band Accelerating Sections (rms)		
RF Voltage [ΔV]	± 0.02	%
RF Phase [$\Delta\phi$]	± 0.10	deg
Cathode Laser System (max)		
Charge [ΔQ]	± 1	%
Laser time of arrival [Δt]	± 0.02	fs
Laser Spot size [$\Delta\sigma$]	± 1	%

	Witness		Driver		
	Without errors	With errors	Without errors	With errors	
Charge	30.00	30.00 \pm 0.33	200.00	200.00 \pm 2.00	pC
Energy	537.18	537.19 \pm 0.31	539.29	539.29 \pm 0.30	MeV
Energy spread	0.712	0.711 \pm 0.003	0.92	0.92 \pm 0.001	‰
Bunch length	19.88	19.97 \pm 0.32	205.87	205.55 \pm 0.87	fs
I_{peak}	1873	1643 \pm 99	-	-	kA
Δt	0.494	0.494 \pm 0.044	-	-	fs
$\epsilon_{n,x,y}$	0.562	0.562 \pm 0.007	4.18	4.22 \pm 0.15	mm mrad
$\sigma_{x,y}$	1.5	1.52 \pm 0.18	5.85	5.89 \pm 1.07	μm
$\beta_{x,y}$	4.3	4.5 \pm 1.1	8.8	9.1 \pm 3.3	mm
$\alpha_{x,y}$	1.2	1.2 \pm 0.25	1.65	1.65 \pm 0.30	

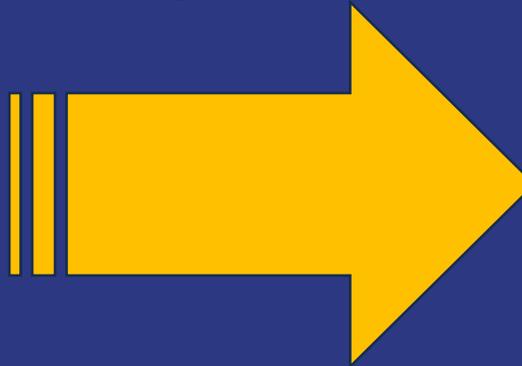

- Errors are intended as rms quantities
- Driver & Witness numerically separated on the longitudinal axes

End of 2023 results: ~ 3%

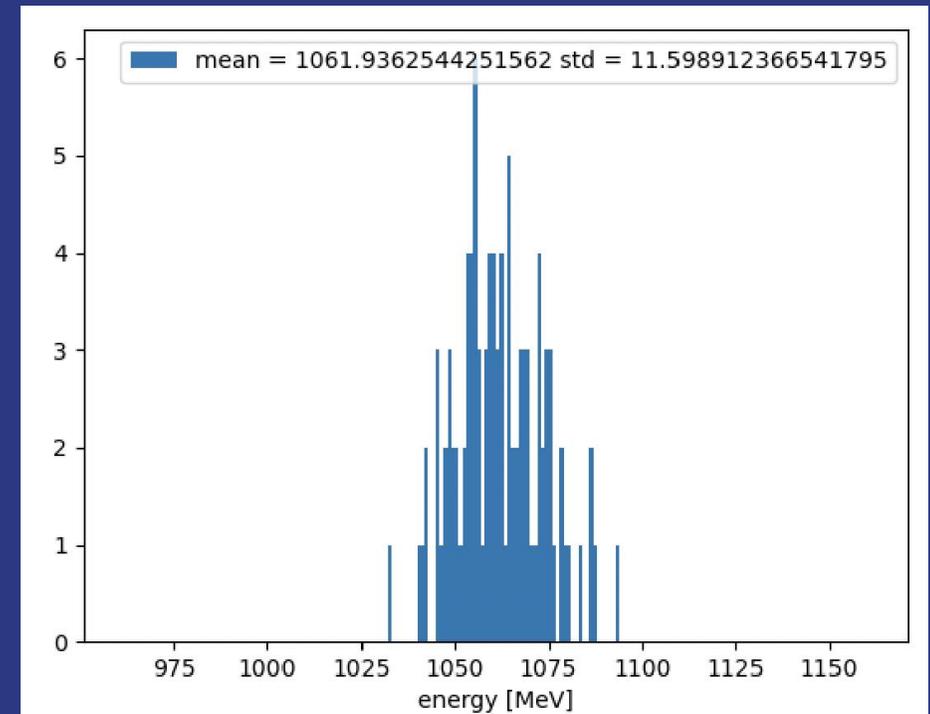

Nominal case

- through continuous work to optimize the working point for Linac and plasma module
- to be finalized in the next 1-2 months to be compliant with the TDR delivery schedule

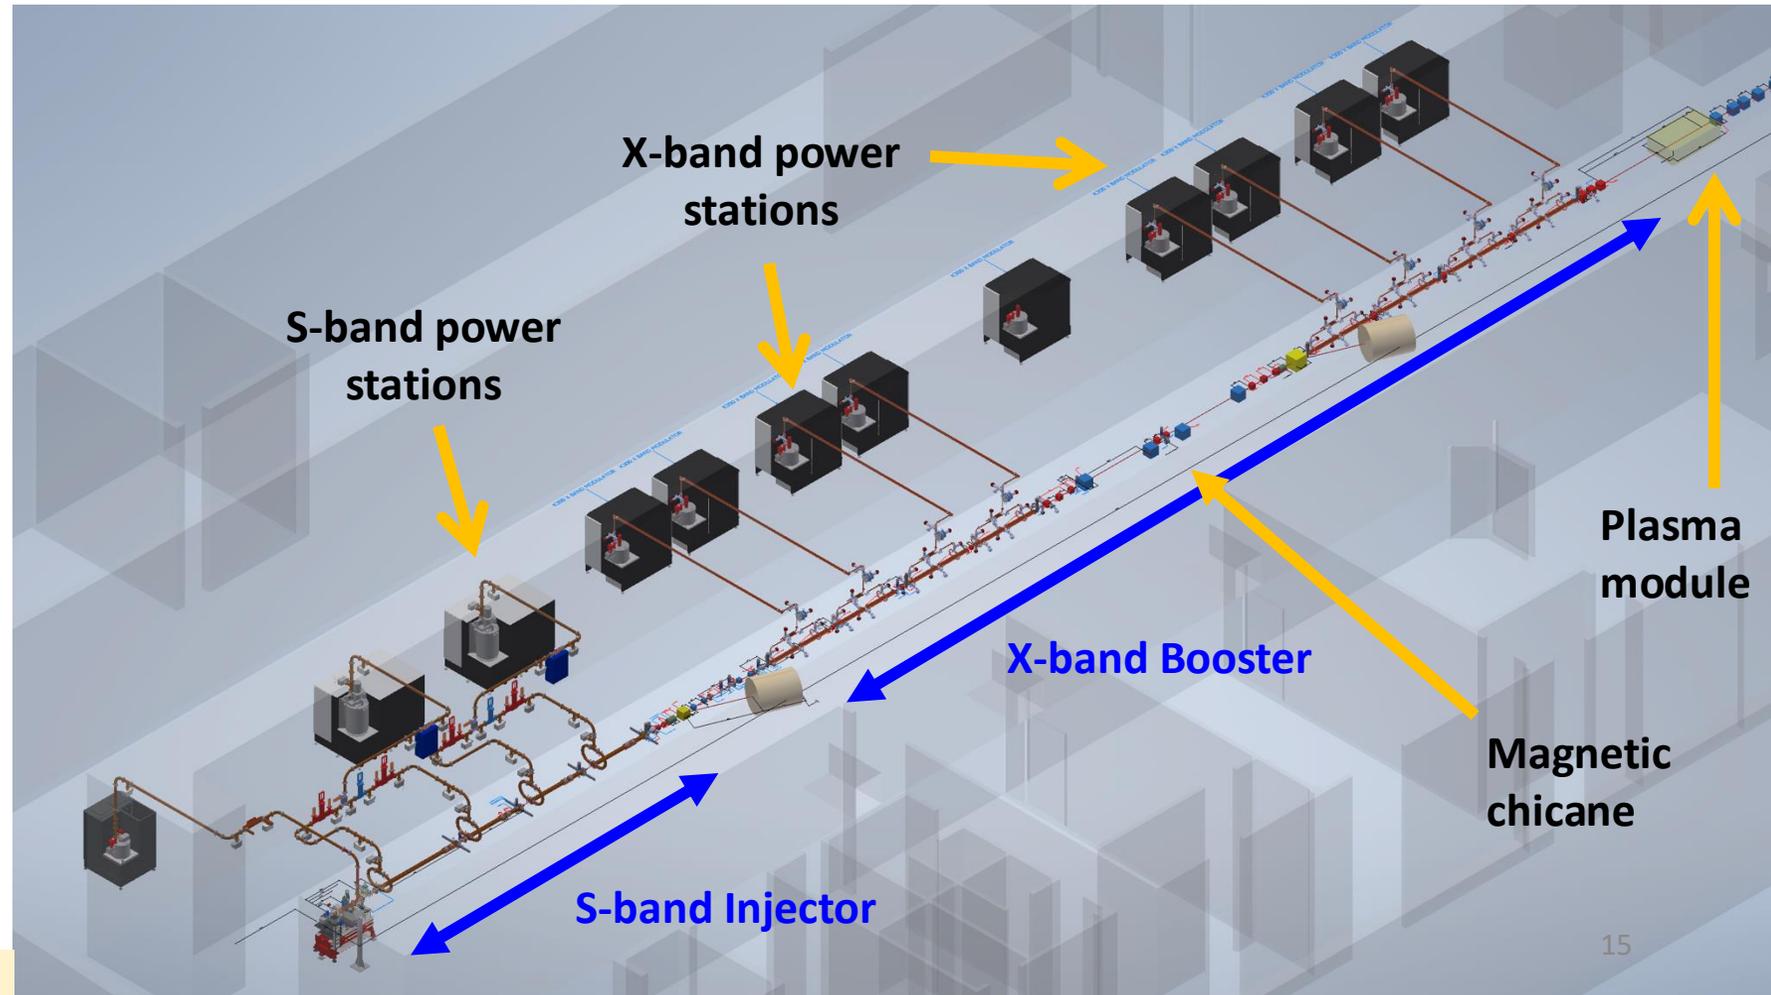

Sep 2024 results: ~ 1%

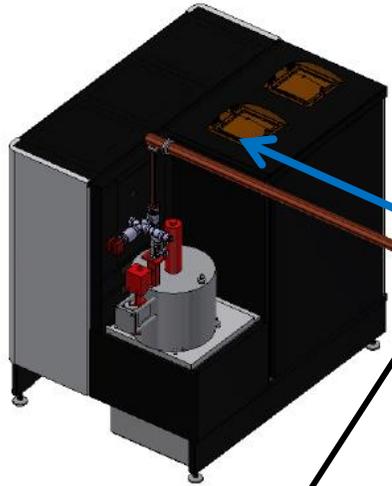

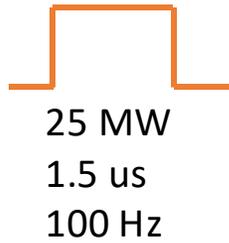

RF X-BAND LINAC

- ⇒ High brightness electron beam up to **1 GeV**, at **100 Hz** repetition rate (baseline) with a possible future upgrade at 400 Hz, single bunch;
- ⇒ **S-band (2.856 GHz) injector** composed by a photocathode 1.6 cells SW RF Gun and 1x 3m TW S-band structure and 3x 2m TW S-band structures;
- ⇒ **X-band (11.994 GHz) booster** composed by **16xTW, 0.9 m accelerating structures** with a nominal gradient of **60 MV/m**, **8 X band power station (25 MW, 1.5us, up to 400 Hz)**
- ⇒ **Magnetic chicane**

Plasma Accelerating Module

- Plasma formation:
 - Gas-filled discharge capillary
 - HV sources
 - Gas source/Vacuum system
- Stabilization:
 - Laser trigger
- Diagnostics:
 - Stark broadening (ICCD/Spectrometer/Optics)

High repetition rate operations

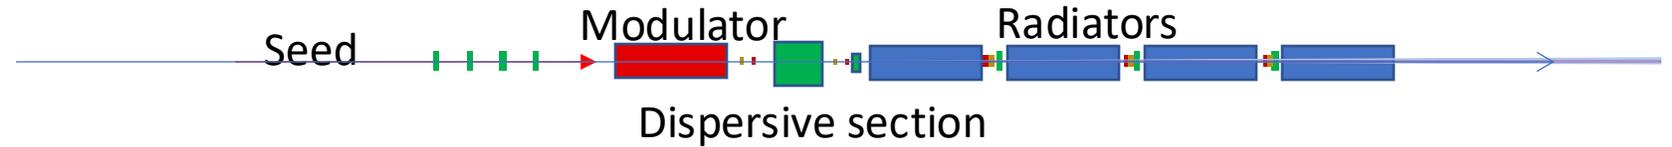

- Plasma source design
 - Walls material
 - 60 cm long
- HV source
- Vacuum system/Gas source

Soft-X ray SASE FEL – optimized for 4 nm

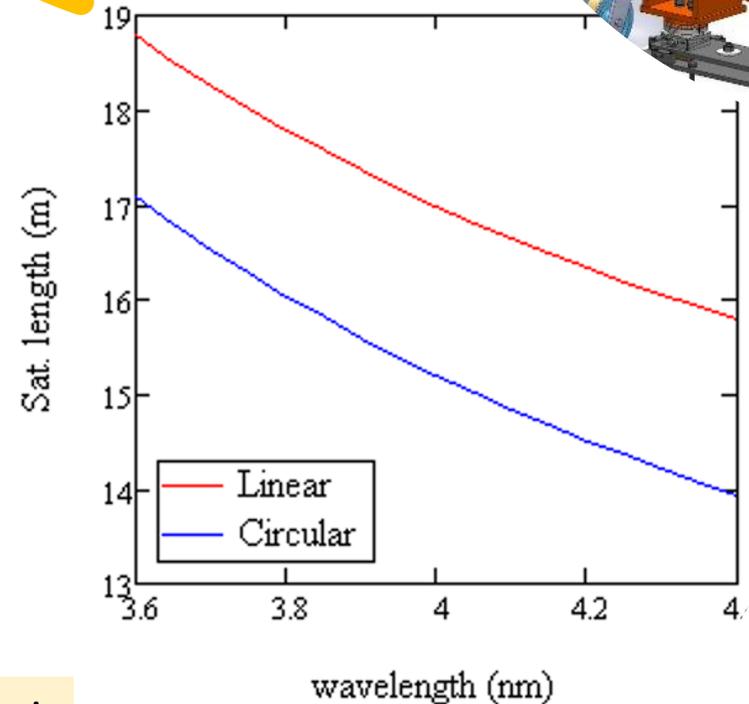

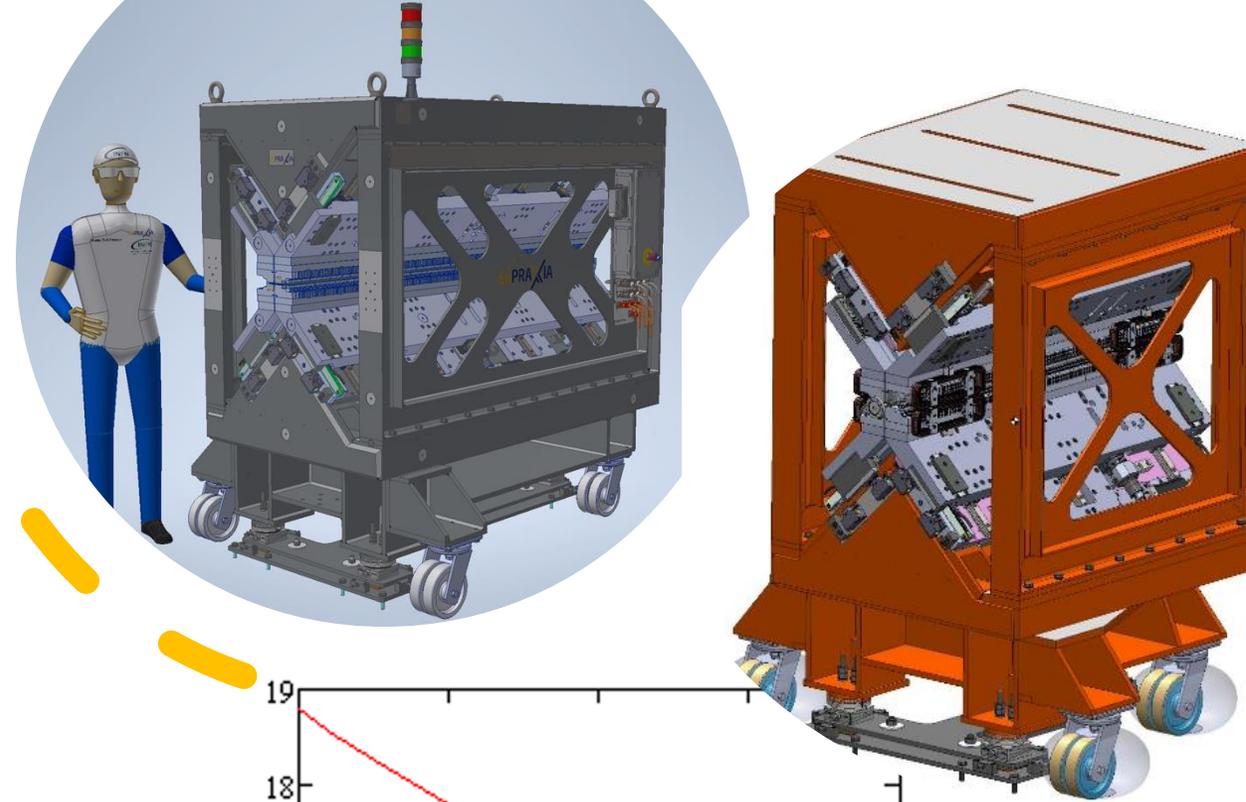

EUPRAXIA AQUA Undulator Model (derived from SABINA)

- The total undulator magnetic length considered is 20 m, i.e. 10 modules 2 m each.
- **Period length:** provide sufficient tuning range at fixed energy which allows the FEL to reach carbon and eventually nitrogen K-edge (at higher peak current/beam energy) is 18 mm.
- **Polarization:** variable polarization is an asset as it fits with the requests from the scientific case. Circular polarization ensures higher gain (about 2 m = 1 module)
- **Apple X type:** Substantially higher field at comparable undulator aperture = extended tuning range. Tuning range independent of polarization.
- Experience from the SABINA Undulator at LNF (KYMA).
- The target photon energy range is extended toward lower photon energies by
 - Small gap aperture (thin UV chamber walls – Apple X design)
 - High undulator remanent field (high remanent field magnets are assumed – $B_r=1.35$ T)
 - Tuning the electron beam energy

Fully symmetric (K_{\max} independent of polarization)

Courtesy of L. Giannessi

- The updated timeline for the EuPRAXIA@SPARC_LAB Technical Design Report foresees its delivery by the end of 2025 that means the complete version ready for revision by June 2025.
- Since 2021 the activity has been followed by the Review Committee and more recently the Editorial Board has been charged with coordinating and harmonising the TDR document
- The readiness of the technical content is around 70-80%
- The activity is now deeply focused on the drafting of the chapters of the document
