

CASTLE 2024

Tuesday, 17 September 2024 - Friday, 20 September 2024

Castello di Tagliolo Monferrato

Book of Abstracts

Contents

Welcome & opening remarks	1
State of the art of optical/near-infrared cosmological surveys	1
Cross-Correlation between CIB and Galaxy Clustering	1
Future measurements of S8 parameter with tomographic cross-correlations between LSST and CMB experiments	1
State of the art of radio cosmological surveys	1
Unveiling the HI auto-power spectrum with MeerKAT	1
State of the art of CMB surveys and complementary observables	2
Neutral Hydrogen stacking from MeerKLASS: challenges, results and prospects for SKA- Mid	2
Cross-correlating the Evolutionary Map of the Universe (EMU) Pilot Survey with CMB Lensing: Constraints on Cosmology and Galaxy Bias	2
Fire talks	2
Detecting Relativistic Doppler via Multi-tracing a Single Galaxy Population	2
Cosmology with HI Intensity Mapping on Small Scales	2
Squeezing information from radio surveys to probe the primordial Universe	3
Constraining the Growth History and Quasar Bias Evolution at High-z with Quaia	3
Model-independent test of General Relativity through the combination of the Weyl poten- tial and Galaxy Velocities	3
Model-Independent Measurement of the Matter-Radiation Equality Scale from DESI and Tactics for Upcoming Surveys	3
Testing gravity through the distortion of time	3
Running primordial perturbations: prospects from future large-scale surveys	3
Self-calibration of observational systematic effects	4
On cosmological clustering of Graviational Wave events	4

Assembly bias in the local PNG halo bias and its implication for fNL constraints	4
Importance of Relativistic Contributions to the Galaxy Bispectrum	4
Machine learning for cosmology: from consistency tests to simulation based inference	4
Forecasting the sensitivity of pulsar timing arrays to scalar induced gravitational waves	4
Damping wings in the Lyman-alpha forest: a model-independent measurement of the neutral fraction at $5.4 < z < 6.1$	5
The infall region as a complementary probe to cluster counts	5
Machine Learning Identification of Strongly Lensed Gravitational Waves Events	5
A Trifecta of Modelling Tools: Navigating COMPAS, Shark and Bayesian Inference for Binary Black Hole Model Selection	5
Wrap-up discussion	5

1

Welcome & opening remarks**Corresponding Author:** stefano.camera@unito.it

2

State of the art of optical/near-infrared cosmological surveys**Corresponding Author:** davide.bianchi1@unimi.it

Review talk(s)

4

Cross-Correlation between CIB and Galaxy Clustering**Corresponding Author:** 1029881934@qq.com

5

Future measurements of S8 parameter with tomographic cross-correlations between LSST and CMB experiments**Corresponding Author:** cssaraf@kasi.re.kr

6

State of the art of radio cosmological surveys**Corresponding Author:** marta.spinelli@inaf.it

Review talk(s)

7

Unveiling the HI auto-power spectrum with MeerKAT**Corresponding Author:** matilde.barberi@unimi.it

9

State of the art of CMB surveys and complementary observables**Corresponding Author:** bhu@bnu.edu.cn

Review talk

10

Neutral Hydrogen stacking from MeerKLASS: challenges, results and prospects for SKA-Mid**Corresponding Author:** ztchenustc@gmail.com

11

Cross-correlating the Evolutionary Map of the Universe (EMU) Pilot Survey with CMB Lensing: Constraints on Cosmology and Galaxy Bias**Corresponding Author:** konstantinos.tanidis@physics.ox.ac.uk

12

Fire talks**Corresponding Authors:** bianca.decaro@inaf.it, pierluigi.monaco@inaf.it, roberto.scaramella@inaf.it

13

Detecting Relativistic Doppler via Multi-tracing a Single Galaxy Population**Corresponding Author:** federico.montano@to.infn.it

14

Cosmology with HI Intensity Mapping on Small Scales

Corresponding Author: aishrila.mazumder@manchester.ac.uk

15

Squeezing information from radio surveys to probe the primordial Universe

Corresponding Author: dakaragian@gmail.com

16

Constraining the Growth History and Quasar Bias Evolution at High- z with Quaia

Corresponding Author: giulia.piccirilli@roma2.infn.it

17

Model-independent test of General Relativity through the combination of the Weyl potential and Galaxy Velocities

Corresponding Author: nastassia.grimm@unige.ch

18

Model-Independent Measurement of the Matter-Radiation Equality Scale from DESI and Tactics for Upcoming Surveys

Corresponding Author: benedictkalus@gmail.com

19

Testing gravity through the distortion of time

Corresponding Author: sveva.castello@unige.ch

20

Running primordial perturbations: prospects from future large-scale surveys

Corresponding Author: davidparkinson@kasi.re.kr

21

Self-calibration of observational systematic effects

Corresponding Author: roberto.ingrao@to.infn.it

22

On cosmological clustering of Graviational Wave events

Corresponding Author: jose.fonseca@astro.up.pt

23

Assembly bias in the local PNG halo bias and its implication for fNL constraints

Corresponding Author: titouan.lazeyras@unimib.it

24

Importance of Relativistic Contributions to the Galaxy Bispectrum

Corresponding Author: samanthajosephine.rossiter@unito.it

25

Machine learning for cosmology: from consistency tests to simulation based inference

Corresponding Author: matteo.martinelli@roma1.infn.it

53

Forecasting the sensitivity of pulsar timing arrays to scalar induced gravitational waves**Corresponding Author:** chiara.cecchini@unitn.it

54

Damping wings in the Lyman-alpha forest: a model-independent measurement of the neutral fraction at $5.4 < z < 6.1$ **Corresponding Author:** benedetta.spina95@gmail.com

55

The infall region as a complementary probe to cluster counts**Corresponding Author:** c.mpetha@ed.ac.uk

56

Machine Learning Identification of Strongly Lensed Gravitational Waves Events**Corresponding Author:** giulia.campailla@edu.unige.it

57

A Trifecta of Modelling Tools: Navigating COMPAS, Shark and Bayesian Inference for Binary Black Hole Model Selection**Corresponding Author:** raufliana@gmail.com

58

Wrap-up discussion
