

## #1 Update on ...

### ***Initial look at alpha tracks for directional & head-tail determination***

*David Marques and PMT Working Group*

*Technical / Analysis meeting 05-06-2024*

Let's resume all the information:

1. **Time over threshold** gives me the alpha  $\Delta Z$ 
  - Together with camera XY angle  $\Rightarrow$  **theta angle**
2. The **position of the Bragg** peak tells me **angle theta signal in Z**
  - (Towards cathode or GEMs)
3. **Relative amplitudes between PMTs** give me the **quadrant position** in X-Y
  - Useful for **basic association** cluster-waveform
4. **Skewness of Bragg peak** (within the waveform) **difference** between PMTs gives me the **direction** of the particle ( $\phi$ )
  - **Analyser class (directionality)** gives me **Angle in X-Y (phi)** and the  $\Delta XY$ 
    - Could be confirmed / tested against PMT Bragg peak skewness method
  - Bragg peak more prominent because the track are small, thus geometrical effect plays a smaller role
  - Also gives a hint of the X-Y angle, but this is easier to get with the camera

Let's resume all the information:

- Time over threshold** gives me the alpha  $\Delta Z$ 
  - Together with camera XY angle  $\Rightarrow$  theta angle
- The **position of the Bragg** peak tells me angle theta signal in Z
  - (Towards cathode or GEMs)
- Relative amplitudes between PMTs** give me the **quadrant position** in X-Y
  - Useful for **basic association** cluster-waveform
- ~~Skewness of Bragg peak (within the waveform) difference between PMTs gives me the direction of the particle (theta-phi)~~
  - Analyser class (directionality)** gives me **Angle in X-Y (phi)** and the  $\Delta XY$ 
    - Could be confirmed / tested against PMT Bragg peak skewness method
  - ~~Bragg peak more prominent because the track are small, thus geometrical effect plays a smaller role~~
  - ~~Also gives a hint of the X-Y angle, but this is easier to get with the camera~~

## Reconstructed info:

- $\Delta Z$
- Theta angle
- $\Delta XY$
- Phi angle
- Signal of theta + phi == Head-tail

**3D reconstruction**

# PMT Signal – Examples

- Run 22100, ev 40

- Bragg peak on the right  $\Rightarrow$  moving **towards cathode**.
- Leftwards or rightwards?  $\Rightarrow$  Skewness higher for PMTs 2 and 3, moving **rightwards**

<<<<< Last time example >>>>>

# PMT Signal – Examples

- Run 22100, ev 40

Now we perform some magic and...

PMT\_fast\_run\_22100\_ev\_40\_tr\_0\_ch\_4.png

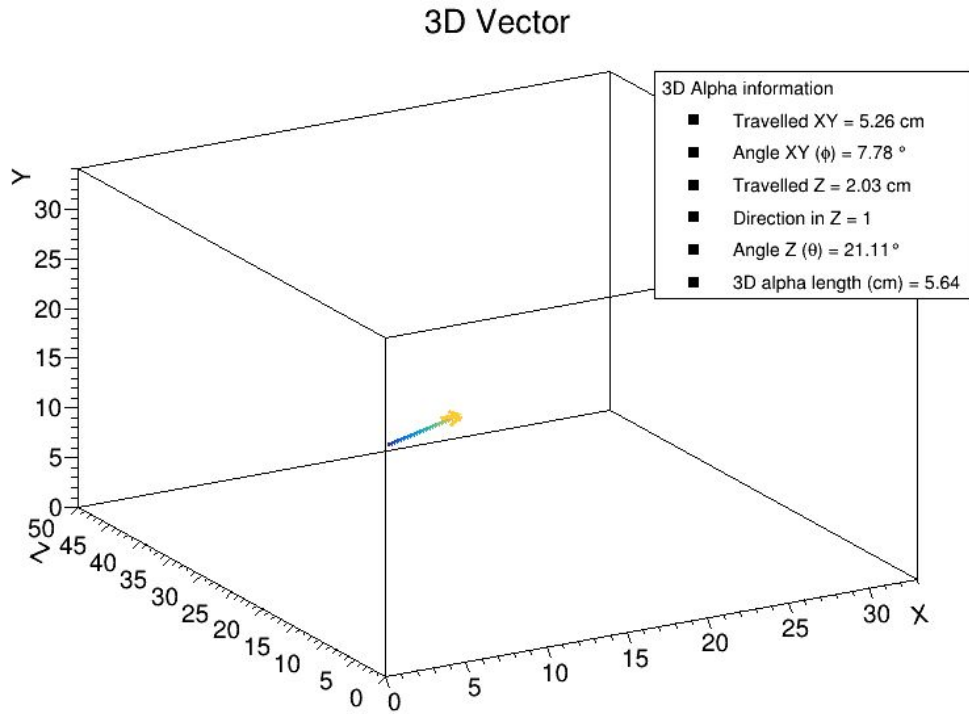

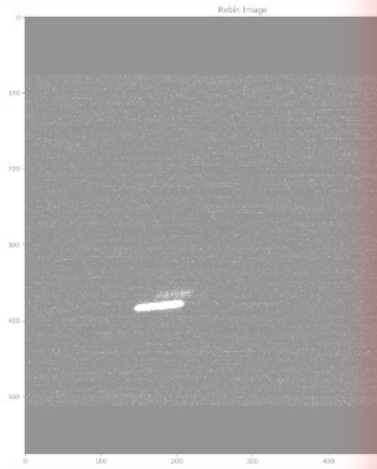

PMT\_fast\_run\_22100\_ev\_40\_tr\_0\_ch\_3.png

Bragg peak on the right  $\Rightarrow$  moving **towards cathode**.  
Leftwards or rightwards?  $\Rightarrow$   
Skewness higher for PMTs 2 and 3, moving **rightwards**

<<<<< Last time example >>>>>

- Run 22100, ev 40

- Bragg peak on the right  $\Rightarrow$  moving **towards cathode.**
- Leftwards or rightwards?  $\Rightarrow$  Skewness higher for PMTs 2 and 3, moving **rightwards**

<<<<< Last time example >>>>>

1. Read reco-files directly after official reconstruction (we start with camera since it's more likely to \*not\* see the signal)

```
CAM Reco data file opened: reco_run22100_3D.root  
PMT Reco data file opened: reco_run22100_3D_pmt.root
```

- Run 22100, ev 40

1. Read reco-files directly after official reconstruction (we start with camera since it's more likely to *\*not\** see the signal)

```
CAM Reco data file openend: reco_run22100_3D.root
PMT Reco data file openend: reco_run22100_3D_pmt.root
```

2. Apply some basic cuts

```
if ( sc_integral[sc_i]/sc_nhits[sc_i] > 25 && sc_length[sc_i] > 100 && sc_width[sc_i] > 50 ) { //Alpha cut from
  Giorgio
```

- Run 22100, ev 40

# PMT - 3D Deconstruction

1. Read reco-files directly after official reconstruction (we start with camera since it's more likely to \*not\* see the signal)

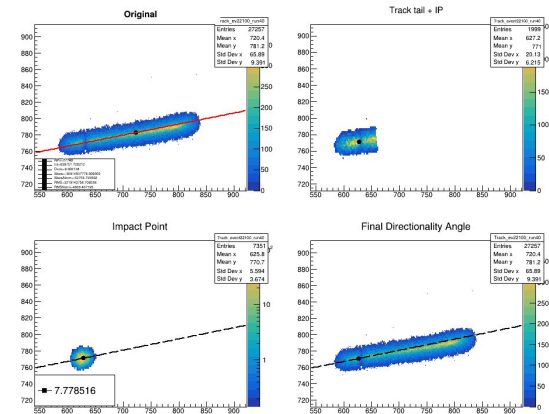

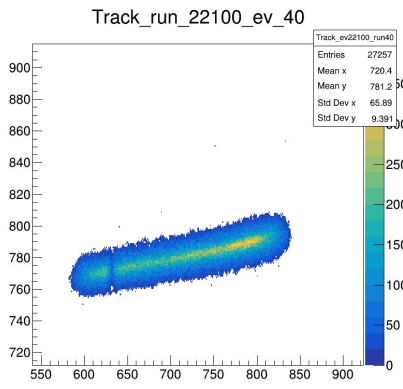

```
CAM Reco data file opened: reco_run22100_3D.root
PMT Reco data file opened: reco_run22100_3D_pmt.root
```

2. Apply some basic cuts

```
if ( sc_integral[sc_i]/sc_nhits[sc_i] > 25 && sc_length[sc_i] > 100 && sc_width[sc_i] > 50 ) { //Alpha cut from
Giorgio
```

3. Run analyser class (Flaminia base, Samuele directionality, Atul's ML, Davide comments ...)

- Run 22100, ev 40

```
Track information:
-> Position barycenter: x: 722.224; y: 782.977
-> Quadrant: 4
-> Angle: 7.77852 degrees.
-> Length (cm): 5.26497
```

## 4. (Optional) Save the track's profiles

## 5. Save all the camera information

## ● Run 22100, ev 40

```
//----- Collect all the relevant info for posterior analysis -----  
  
CAM_alphas.push_back({  
    .run = cam_run,  
    .pic = cam_event,  
  
    .angle_XY = angle_cam,  
    .trv_XY = sc_length[sc_i] * granularity,  
  
    .quad = quadrant_cam,  
  
    .IP_X_cm = x_impact,  
    .IP_Y_cm = y_impact  
});
```

## 6. Look at waveforms

## ● Run 22100, ev 40

### 6.1. Retrieve:

6.1.1. ToT (\*different from the one of reco)  $\Rightarrow$  average travelled Z

6.1.2. Calculate integral in first and second half  $\Rightarrow$  Majority gives me theta signal

6.1.3. Get alpha quadrant in XY  $\Rightarrow$  Retrieved by checking with PMT sees the stronger signal

### 6.2 Save all the information

```
PMT Track information:  
  
--> Skewness signs: 1 1 1 0   -> skewness sign average is: 0.75  
--> This track is moving towards the cathode.  
--> The average travelled Z (cm) is: 2.0329  
--> The track is in the quadrant: 4
```

## 7. Combined analysis

### 7.1. Only for 1-to-1 matched tracks (tested for multi-trigger events)

```
# Matched alpha in quadrant: 4; in trigger: 0
```

### ● Run 22100, ev 40

## 7. Combined analysis

### 7.1. Only for 1-to-1 matched tracks (tested for multi-trigger events)

```
# Matched alpha in quadrant: 4; in trigger: 0
```

### 7.2. Calculate all the remaining variables through geometry

```
//----- Creating 3D alpha track information -----//  
  
x0 = cam.IP_X_cm;  
y0 = cam.IP_Y_cm;  
z0 = 25.0; // Absolute Z fixed.  
  
x1 = x0 + ( cam.trv_XY * cos(cam.angle_XY * TMath::Pi()/180.));  
y1 = y0 + ( cam.trv_XY * sin(cam.angle_XY * TMath::Pi()/180.));  
z1 = z0 + ( pmt.trv_Z * pmt.dir);  
  
double theta_angle = atan(pmt.trv_Z/cam.trv_XY) * 180. / TMath::Pi();  
  
// double length = TMath::Sqrt(pow(x1-x0,2) + pow(y1-y0,2) + pow(z1-z0,2));  
double length = TMath::Sqrt(pow(cam.trv_XY,2) + pow(pmt.trv_Z,2));
```

```
** 3D Alpha track information: **  
  
--> Travelled XY: 5.26497  
--> Angle XY (#phi): 7.77852  
--> Travelled Z: 2.0329  
--> Direction in Z: 1  
--> Angle Z (#theta): 21.1125  
--> 3D alpha length (cm): 5.64381
```

## ● Run 22100, ev 40

## 7. Combined analysis

### 7.1. Only for 1-to-1 matched tracks (tested for multi-trigger events)

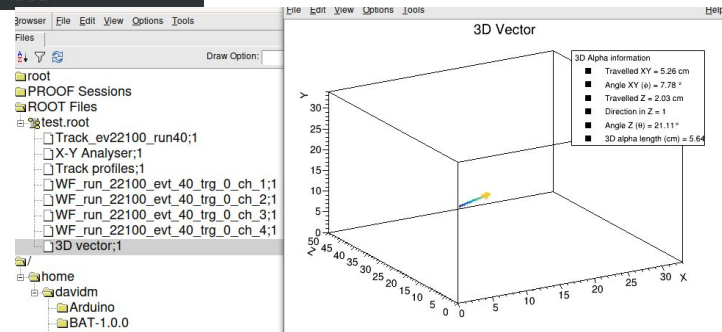

```
# Matched alpha in quadrant: 4; in trigger: 0
```

### 7.2. Calculate all the remaining variables through geometry

```
//----- Creating 3D alpha track information -----//  
  
x0 = cam.IP_X_cm;  
y0 = cam.IP_Y_cm;  
z0 = 25.0; // Absolute Z fixed.  
  
x1 = x0 + ( cam.trv_XY * cos(cam.angle_XY * TMath::Pi()/180.));  
y1 = y0 + ( cam.trv_XY * sin(cam.angle_XY * TMath::Pi()/180.));  
z1 = z0 + ( pmt.trv_Z * pmt.dir);  
  
double theta_angle = atan(pmt.trv_Z/cam.trv_XY) * 180. / TMath::Pi();  
  
// double length = TMath::Sqrt(pow(x1-x0,2) + pow(y1-y0,2) + pow(z1-z0,2));  
double length = TMath::Sqrt(pow(cam.trv_XY,2) + pow(pmt.trv_Z,2));
```

```
** 3D Alpha track information: **  
  
--> Travelled XY: 5.26497  
--> Angle XY (#phi): 7.77852  
--> Travelled Z: 2.0329  
--> Direction in Z: 1  
--> Angle Z (#theta): 21.1125  
--> 3D alpha length (cm): 5.64381
```

### 7.3 Feed all the information to a 100 line script to create a 3D vector in ROOT and put everything in a file.

### ● Run 22100, ev 40

## Some other examples

# PMT Alpha 3D reco – Examples

CAM

PMT

Association

(will be improved with other PMT selection / Bayes)

## 1. Missing (?) features

- Color gradient is fake  $\Rightarrow$  Worth to associate it to longitudinal ionization profile?
- Electron cloud not plotted  $\Rightarrow$  Worth to take 2D transversal profile and create a 3D cylinder around main vector?
- ToT doesn't take into account minimum signal temporal width  $\rightarrow$  travelled Z slightly overestimated
- Improve association  $\Rightarrow$  Using BAT?
- Improve theta signal calculation  $\Rightarrow$  Also probably using BAT
- Get some basic PMT Alpha cuts to allow PMT-only analysis (?)
- Optimize Analyzer code ( cross-check parameters, increase speed)

## 2. Upcoming (?) analysis:

- **Comparison with simulation**  $\Rightarrow$  Not available for alphas, neither from the PMT side nor camera (digitization too slow (?))
- **Statistical analysis.** What do we expect?
  - Angle signal – Higher rate towards GEMs than towards cathode (cause cathode is bigger/higher mass)
  - Sense (left/right and up/down) – Higher rate towards *center* from material radioactivity
    - All this on top of flat background from Radon/gas random emission
- **What else?**
