Artificial Intelligence for BNCT: current applications and future prospects

•This work was funded by the Italian National Institute for Nuclear Physics, CSN5 Young Researchers Grant AI_MIGHT.

•This work was funded by the National Plan for NRRP Complementary Investments (PNC, established with the decree-law 6 May 2021, n. 59, converted by law n.101 of 2021) in the call for the funding of research initiatives for technologies and innovative trajectories in the health and care sectors (Directorial Decree n. 931 of 06-06-2022) - project n. PNC0000003 - Advanced Technologies for Human-centred Medicine (project acronym: ANTHEM). This work reflects only the authors' views and opinions, neither the Ministry for University and Research nor the European Commission can be considered responsible for them.

18 cases of GBM tumours studied with the TPS

Ongoing: evaluation of the TCP as a figure of merit to compare the results of the dosimetric calculations on the "True" segmentation and on the NN segmentation

In synergy with PNC_PNRR_ANTHEM:

we opened a collaboration with Università della Campania Luigi Vanvitelli Radiation Oncology Department

we are focusing on AI for the optimisation of the moderation system and for boron imaging

we are studying AI for image reconstruction for a real time imaging during treatment
