Lo stato della ricerca di materia oscura

Thursday, 12 April 2012 12:55 (20 minutes)

We review recent developments in direct and indirect searches for weakly interacting massive particles (WIMPs) as candidates for the dark matter component of the Universe. We discuss the impact of updated limits and indications of signals on the underlying theoretical framework, taking into account also the latest results from collider searches for physics beyond the standard model. Prospects for the future are summarized.

Presenter: Prof. ULLIO, Piero (SISSA)

Session Classification: Astroparticelle

Track Classification: Fisica Astroparticellare
