## Risultati recenti dagli esperimenti a LHC

*Wednesday, 11 April 2012 11:30 (30 minutes)*

The talk will cover the most recent physics results achieved by the major experiments running at the Large Hadron Collider of CERN. The large amount of data delivered in 2011 allowed all major experiments to produce important new results in many areas. A general overview of this very rich harvest of new measurements will be given together with a more detailed description of the latest results on the searches for the Standard Model Higgs Boson. Lastly the challenges and perspectives of 2012 running will be discussed.
