
ATTIVITA' E PREVENTIVI GRUPPO SND@LHC NAPOLI

Antonia Di Crescenzo
per il gruppo SND@LHC di Napoli

- 9 Luglio 2024 -

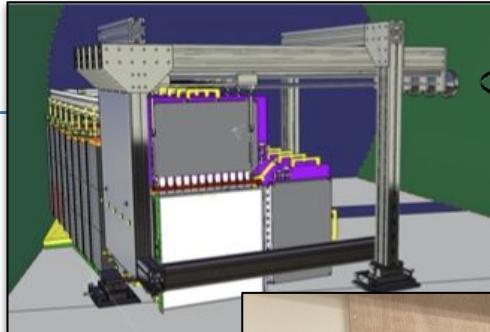

OUTLINE

- Responsabilità e ruolo del gruppo in SND@LHC
- Attività **2024**
 - Assemblaggio e sostituzione wall, sviluppo emulsioni
 - Installazione nuovi microscopi (Napoli e CERN)
 - Scanning e analisi delle emulsioni nucleari
 - Ottimizzazione processamento dati e ricostruzione
 - Progettazione meccanica e realizzazione modifiche per upgrade Veto
- Attività **2025**
 - Assemblaggio e sostituzione wall, sviluppo emulsioni
 - Scanning e analisi delle emulsioni nucleari
 - Ricerca di interazioni di neutrino in emulsione
- Riepilogo richieste

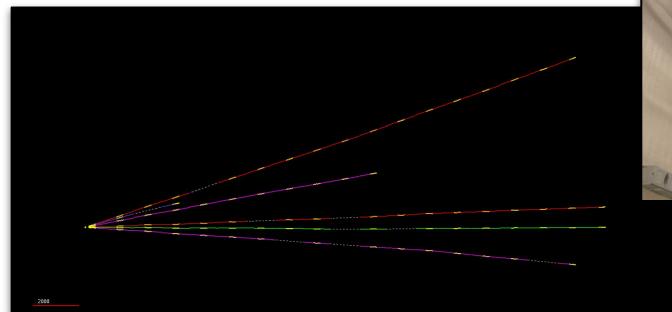

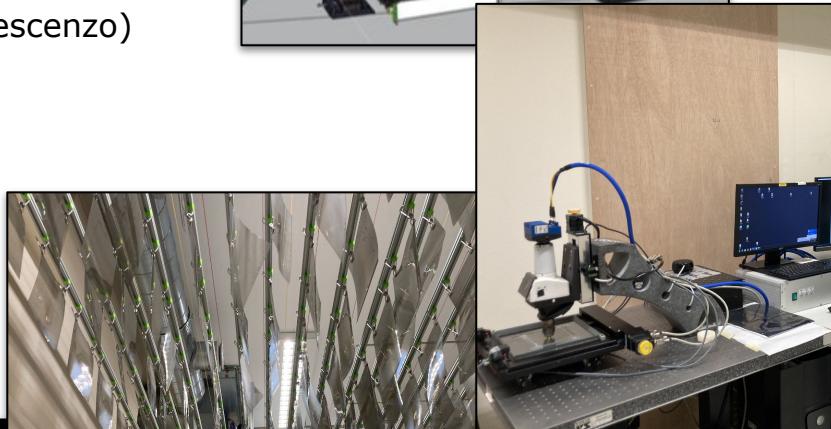

NA GROUP RESPONSIBILITIES

- Spokesperson (G. De Lellis)
- Physics coordinator (A.Di Crescenzo)
- Convener microscopy and emulsion scanning (A. Alexandrov)
- Convener software for emulsion data reconstruction (V.Tioukov)
- Conveners emulsion target system (S.Buontempo, A. Di Crescenzo)

HIGHLIGHTS OF PAST YEARS ACTIVITIES (2021-2023)

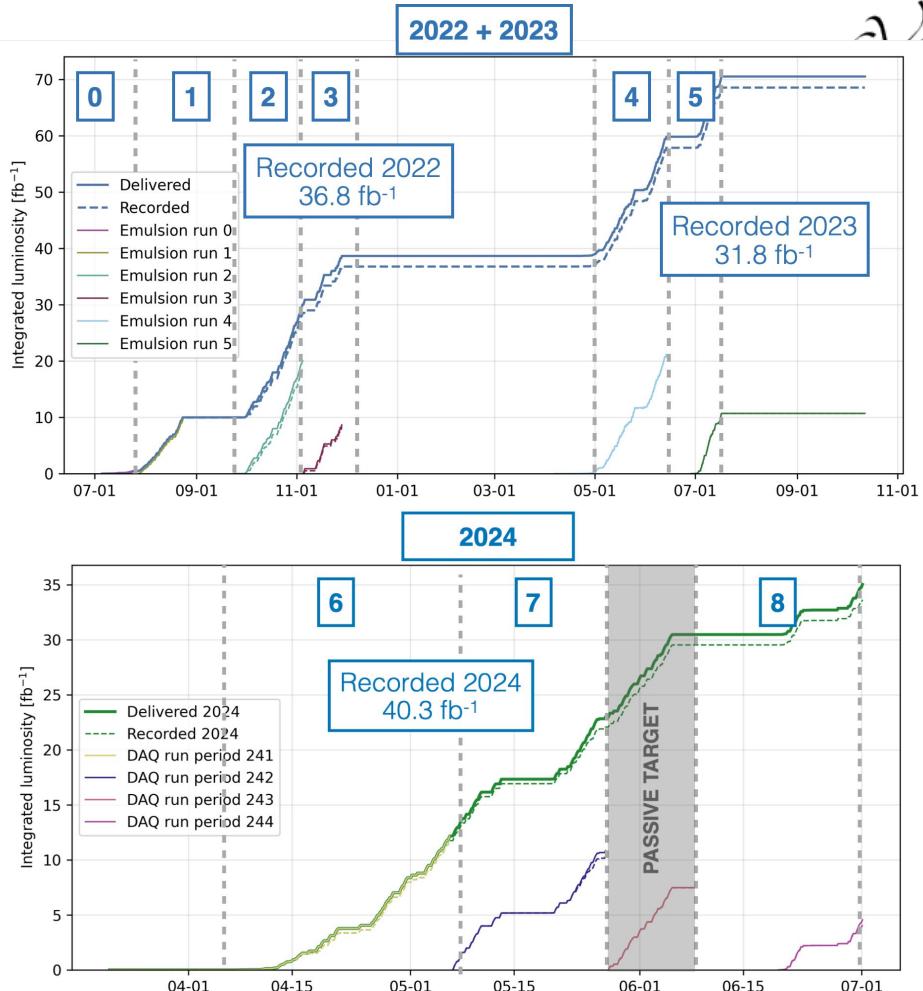

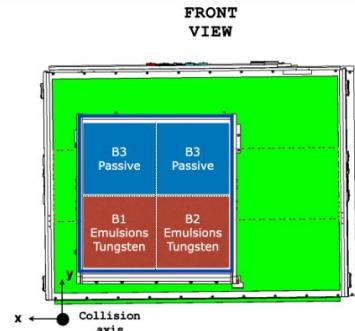

- Design and construction of target mechanical structure
- Installation and operation of emulsion facility at CERN
- Emulsion target assembly and replacement
- Emulsion film development
- Installation and operation of emulsion scanning stations
- Development of new tools for emulsion data analysis

ATTIVITA' 2024

DATA TAKING

- **68.6 fb^{-1}** integrated in **2022** and **2023**
 - Five emulsion target replacements
 - Upper limit for each target: 20 fb^{-1} to keep muon density $< 5 \times 10^4 \text{ tracks/cm}^2$
- New strategy in **2024** due to unexpected (factor 2) increase in the muon flux
 - Instrumentation of half target to maximise signal/noise ratio
 - Upper limit for the exposure: 12 fb^{-1}
 - One full target + two half targets exposed
 - **40.3 fb^{-1}** integrated up to now
 - Six additional half-targets to be exposed

EMULSION TARGET #6

- Full target: five Emulsion/Tungsten walls
- Total mass: **797 kg**
- Number of emulsion films: **1140** (100% Nagoya)
- Target assembly: March 16th-19th
- Target installation: **March 20th**
- Target extraction: **May 6th**

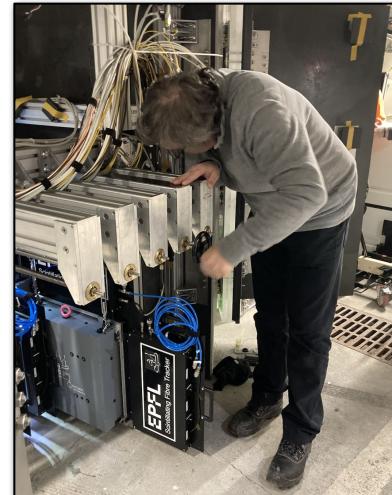

Integrated luminosity: **12.1 fb⁻¹**

Emulsion target transportation

Emulsion target replacement team

Emulsion target installation

EMULSION TARGET #7 and #8

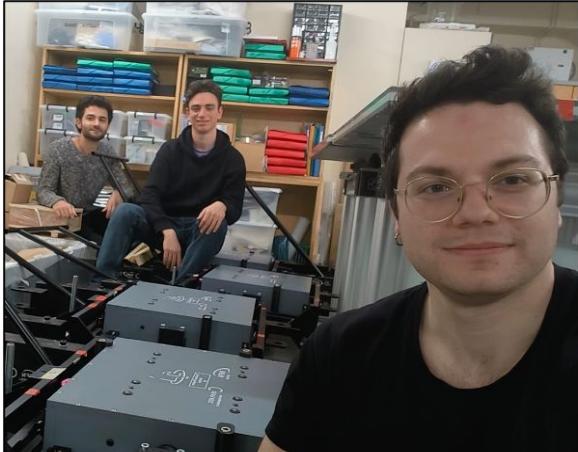

- Semi-target: five half walls (50% equipped with emulsions, 50% passive)
- Total mass: **398 kg**
- Number of emulsion films: **570** (100% Nagoya)

EMULSION TARGET #7

- Target assembly: May 20th-22nd
- Target installation: **May 27th**
- Target extraction: **June 13th**

Integrated luminosity: 7.5 fb^{-1}

Emulsion target assembly

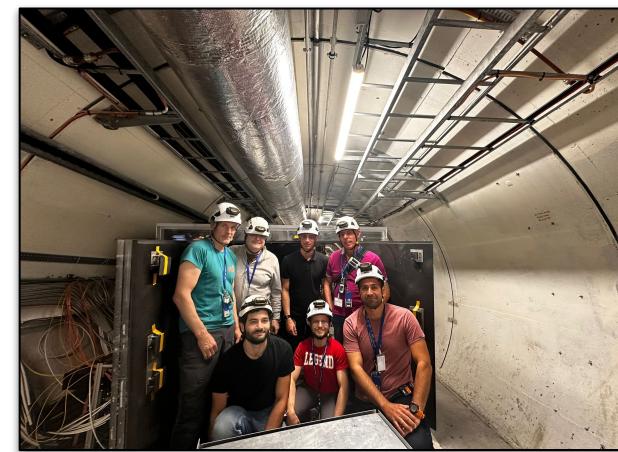

EMULSION TARGET #8

- Target assembly: June 10th-13th
- Target installation: **June 13th**
- Target extraction: **July 8th**

Integrated luminosity: 9.8 fb^{-1}

Emulsion target installation

Emulsion target replacement team

EMULSION FACILITY

A. Lauria, M.C. Montesi

- **40 walls** assembled (15 in 2024)
- **8000 emulsion** films developed (3000 in 2024)
- **300 m²** emulsion films developed (110 m² in 2024)

2024 SCHEDULE

- Most recent LHC Schedule (March 27th):
147.5 days of $p\bar{p}$ run (>1200 bunches) foreseen
- Expected integrated luminosity $\sim 110 \text{ fb}^{-1}$
- One full target (#6) + Two semi-targets (#7 and #8) exposed
- Five additional half-targets to be installed before October 16th
- No access planned in advance in the whole period
- Flexibility in target replacement to profit of any unexpected LHC stop
- Semi-targets prepared in advance and stored in the HL-LHC underground tunnel

LHC Schedule 2024

Version 1.0 was approved at the Research Board of 6 December 2023

MICROSCOPY

A. Alexandrov

Scanning stations in the Collaboration

- 1) Bologna:** 2 systems taking data
- 2) CERN:** 4 systems taking data **(+3)**
- 3) Napoli:** 3 systems taking data **(+1)**
- 4) Santiago:** 1 system ready to take data **(+1)**

Relevant improvements in **2024**:

- Installation of three additional scanning systems at CERN
- Installation of scanning system in Santiago de Chile

CERN

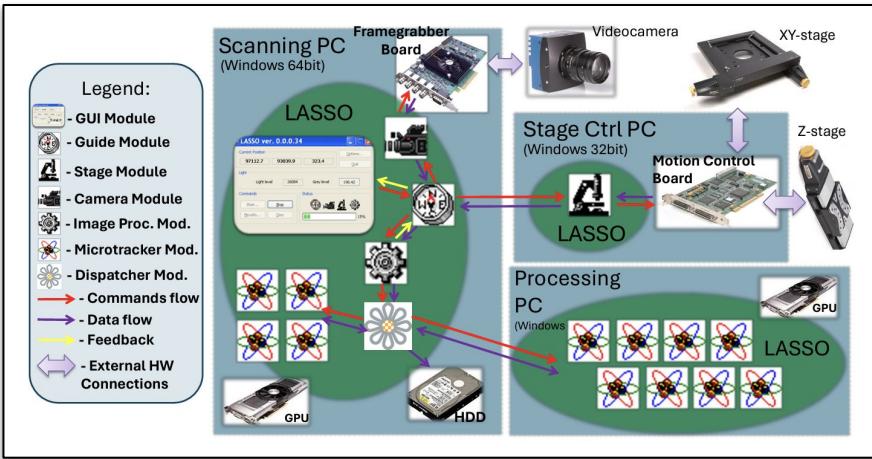

Santiago

EMULSION SCANNING

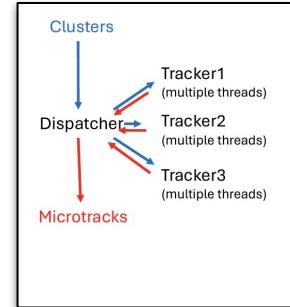

A. Alexandrov

- Development and installation of **distributed dispatcher** for the emulsion data processing
- Boost in the scanning rate:
 - **factor two increase**: from 1 to 2 films/day/system
 - scanning time independent from the integrated luminosity
 - scanning of high luminosity (signal enriched) targets started
- Requirements: one dedicated workstation (*DELL Precision 7875 Tower*) and two GPUs (*MSI Ge Force RTX 4070*) per each pair of scanning systems, switch with 48 1-Gb + 8 10-Gb sockets, 10 Gb fiber line

- Dispatcher splits incoming cluster flux and redirects views into different Trackers for processing
- A Tracker uses multiple threads and GPUs to reconstruct microtracks
- The resultant microtrack flux is sent back to Dispatcher
- Dispatcher aggregates microtracks view-by-view in the original order (and sends the microtracks flux further or saves it to the hard disk)

SCANNING STATUS - 2022 DATA

		EMU	LAB	SCAN	RECO	ANALYSIS
RUN1 (9.5 fb ⁻¹)	W1	S	Lebedev	✗		
	W2	N	Napoli	✓	✓	⌚
	W3	S	Napoli	✗		
	W4	N	CERN	✓	✓	⌚
	W5	S	Bologna	✓	⌚	
RUN2 (20.0 fb ⁻¹)	W1	N	Bologna	✗		
	W2	N	CERN	⌚ 90%		
	W3	N	Napoli	⌚ 36%		
	W4	N	CERN	⌚ 4%		
	W5	N	Napoli	✗		
RUN3 (8.6 fb ⁻¹)	W1	N	CERN	⌚ 16%		
	W2	N	Bologna	⌚ 16%		
	W3	N	Napoli	⌚ 25%	⌚	
	W4	N	Napoli	⌚ 60%	⌚	
	W5	S	CERN	⌚ 50%	⌚	

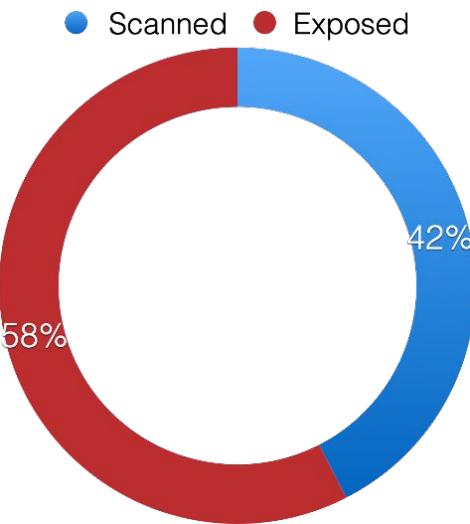

S = Slavich

N = Nagoya

✗ Not started

⌚ In progress

✓ Completed

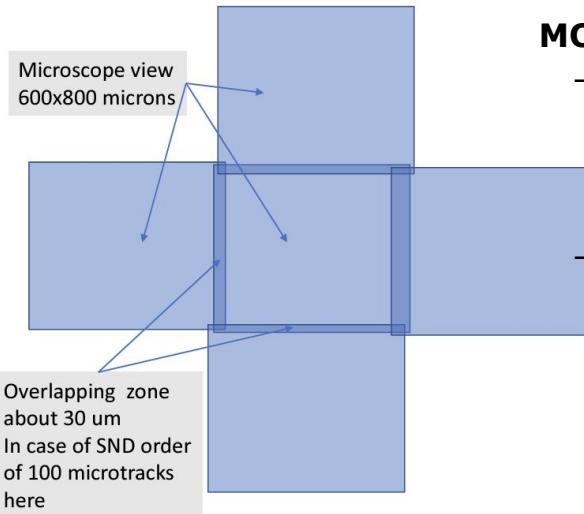

45% of exposed films scanned
15 fb⁻¹
(+6 fb⁻¹ in the last two months)

EMULSION DATA RECONSTRUCTION

- Relevant improvements in the data reconstruction:
 - optical distortions corrected by applying distortion matrix
 - frame-to-frame vibrations corrected online using cluster shadows
 - limiting factors: mechanical deterioration, encoder problems, thermic excursions, stage vibrations
 - Innovative method allowed to improve the position resolution by one order of magnitude

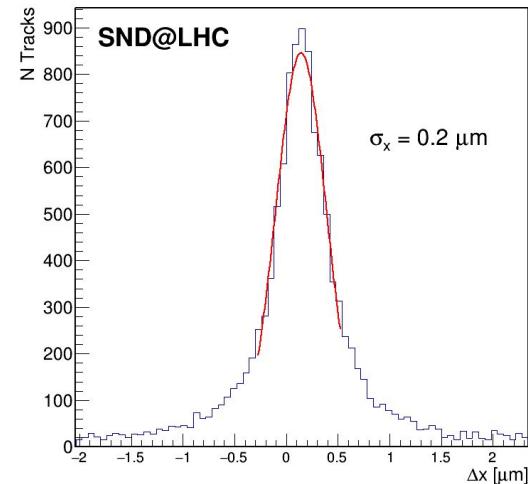

V. Tioukov

MOSAIC ASSEMBLY

- Use microtracks found twice in the overlapping regions to align views to each other in each emulsion layer
- Require about 3×10^5 separate alignments per each SND@LHC plate scanning

POSITION RESOLUTION $0.2 \mu\text{m}$

EM SHOWER SEARCH

V. Tioukov, F. Alicante

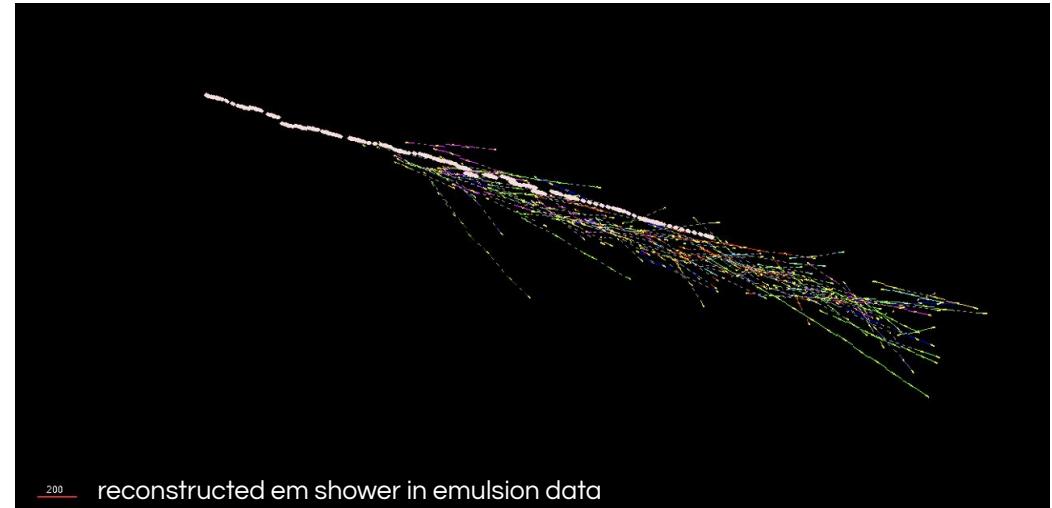

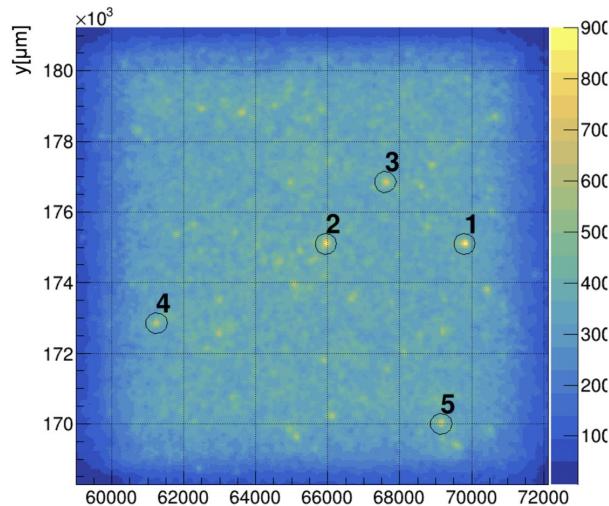

Strategy

- Identify regions of high track density in the emulsions
- Consistent with the expectation of electromagnetic shower development
- Search for neutral vertices associated to identified showers

Status

- Electromagnetic shower patterns identified
- Rejection of passing muons ongoing
- Vertex association ongoing

ATTIVITA' 2025

TARGET INSTALLATION AND DEVELOPMENT

- About 90 fb^{-1} (123 days pp run) expected in 2025
- From 4 to 5 full targets depending on the muon flux
- Target assembly and replacement
- Emulsion development

DRAFT LHC Schedule 2025 PROPOSAL

March 28, 2024

EMULSION DATA ANALYSIS

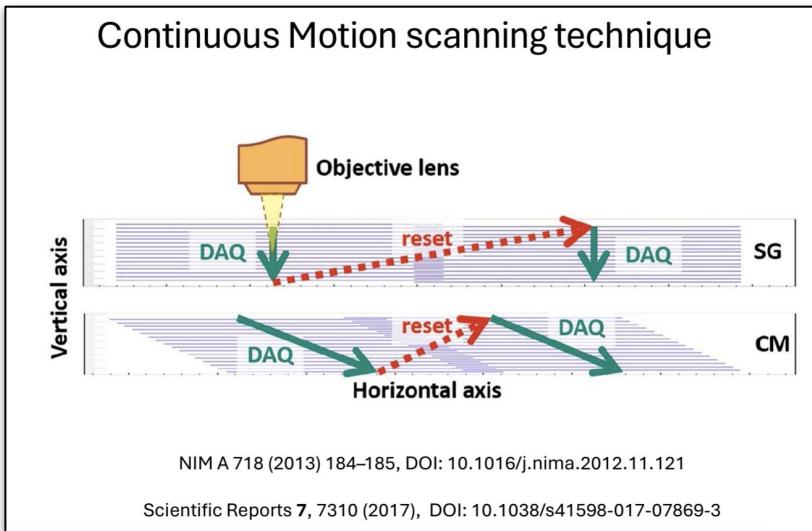

- Emulsion scanning with optical microscopes
- High-resolution track and vertex reconstruction
- Development of analysis tools for background rejection
- Neutrino interaction search
- Global event reconstruction

EMULSION SCANNING

- Improvement in the scanning rate aiming at **3-4 films/day/mic**
- Use **Continuous Motion** (CM) technique with SND@LHC films
- Development of new scanning and reconstruction software for film scan in CM mode

NAPOLI SCANNING LABORATORY

Hardware upgrade consists in:

- Nikon Objective (20X)
- Camera and framegrabber
- DELL Workstation for the data processing

All other components inherited from European Scanning System (ESS) used for OPERA since 2004

Intensive usage of microscopes in the last year caused several damages to:

- XY stages
- Z axis
- old computers hosting the graphic card
- illumination system
- power supplies

New components urgently needed, spares from OPERA are running out

**motorized Z-axis
REQUIRED
11 k€**

**new XY stage funded
by INFN in 2024**

APPARATI: **11 k€**

- Asse Z motorizzato: **11 k€**

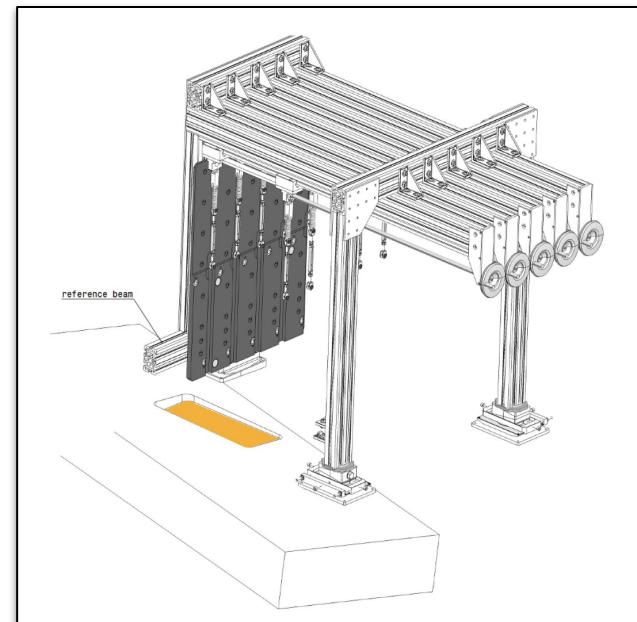

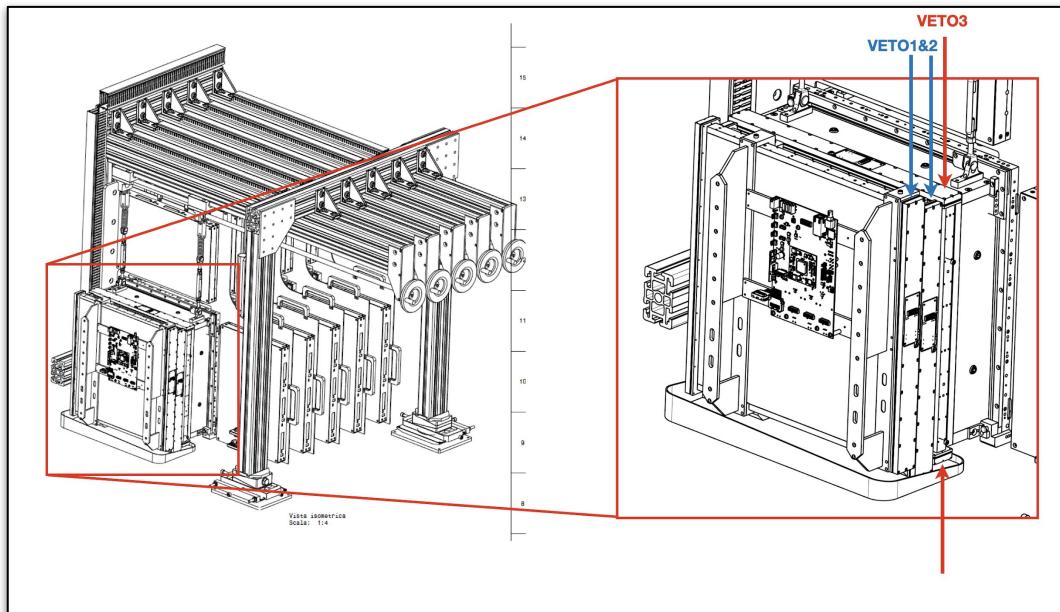

BACKUP

UPGRADE OF THE VETO SYSTEM

G. Passeggio

- Design of the mechanical support for the third Veto plane
- Upgrade of the target system mechanics
- Definition of requirements for excavation in the tunnel floor

EMULSION PROCUREMENT IN 2024

Nagoya emulsions

- Shipment #1: **46 m²** (delivered on February 26th)
- Shipment #2: **45 m²** (delivered on April 23rd)
- Shipment #3: **45 m²** (delivered on May 31st)
- Shipment #4: **45 m²** (delivered on July 1st)
- Shipment #5: expected by August 3rd

Emulsion shipment #1

Emulsion shipment #3

Emulsion shipment #2
