Cultural Heritage Network

Meeting CHNet: nodo di Milano Bicocca

M. Cataldo, **M. Clemenza**, D. Di Martino, G. Marcucci, F. Saliu

Attività principali del nodo

- Esperimenti di CSN5:

CHNet_MAXI	2023-2025	<i>(MiB, PV, CA (UniSS))</i>
CHNet_BRONZE	2023-2025	<i>(MiB, TO, Fi)</i>
CHNet_NICHE	2020-2021	<i>(FI, PV, MiB, BO)</i>
CHNet_TANDEM	2017-2019	<i>(MiB, PV, LNS (UniSS), Roma3)</i>

- Collaborazioni internazionali e accesso a «large facilities»:

ISIS Muon and Neutron Source (RAL UK)
ANSTON (Australia)

- Collaborazioni con Università, Musei e altri gruppi INFN :

UNIPV, LENA (PV), UNIMI,
INFN-LNGS, CA-UniSS,
Museo archeologico di Firenze, Sito archeologico Sant’Imbenia, AGLAE
(Museo del Louvre, Parigi, FR), MOLAB-ERIHS.it, Museo Archeologico
Nazionale di Aquileia

Staff

M. Clemenza (tecnologo INFN)

D. Di Martino (PA UNIMIB-FIS)

F. Saliu (RTDB UNIMIB-DISAT)

Tempo determinato: *assegni post-doc*

M. Cataldo (INFN)

Assegno attuale termina il 31/03/26

G. Marcucci (UNIMIB-FIS)

Assegno attuale termina il 31/01/25, rinnovato fino al 31/01/27

Gruppi di lavoro a cui eventualmente partecipare

Gruppo di lavoro:

GL1 ricerca CSN5

M. Clemenza

GL2 Formazione comunicazione e disseminazione

D. Di Martino, G. Marcucci

GL3 3M, accessi, TT e **GL4** sostenibilità

Tutti

Esperienza con la rete CHNet: punti di forza, criticità, suggerimenti

Punti di forza

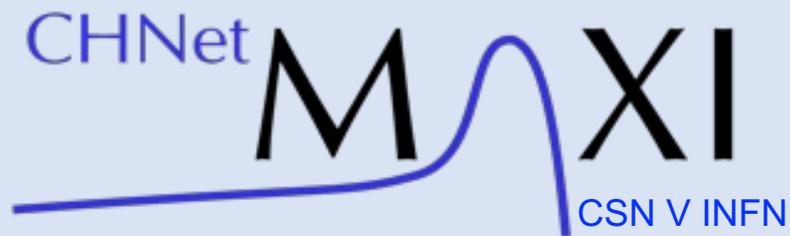

- Condivisione di esperienze ed expertise diverse all'interno dell'INFN
- Maggiore visibilità e peso delle singole attività/laboratori

Criticità

- Mancanza di fondi di trasferta (anche pochi) per sostenere più efficacemente le attività della rete
- Poca presenza in CSN5 di coordinatori con attività sui beni culturali (ci sono solo io...)
- Poca consapevolezza delle iniziative svolte e promosse dagli altri nodi, ancora poca interazione fra i nodi

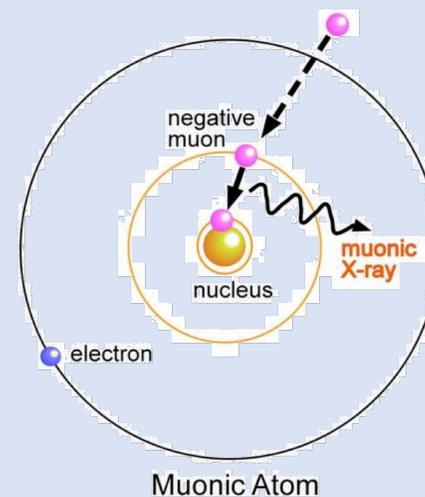

Suggerimenti

- Creazione gruppo whatsapp (se non c'è già) dove poter comunicare immediatamente eventuali iniziative da «rilanciare» poi con i canali meno immediati, mail, teams, social etc...

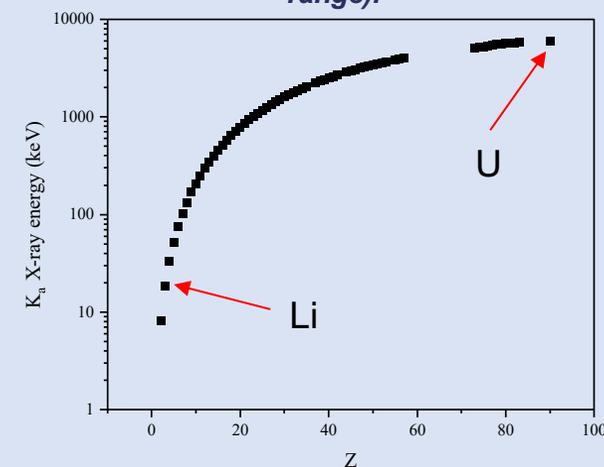

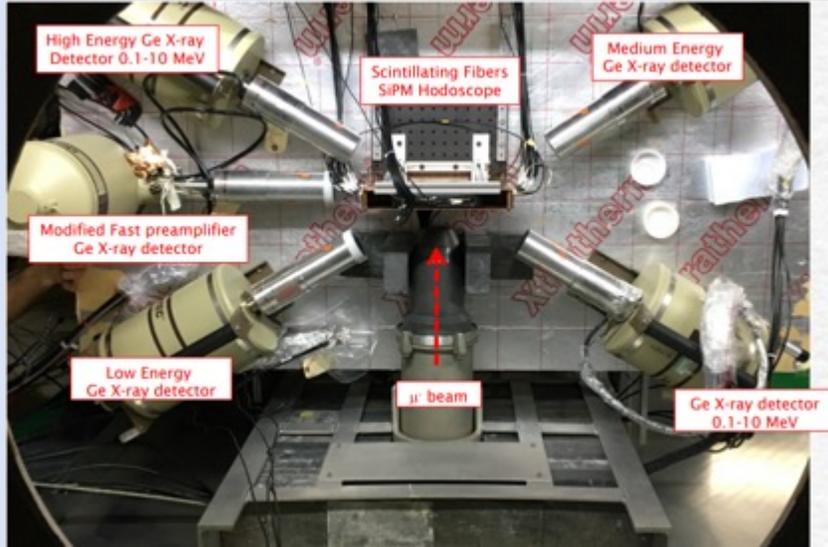

Muonic Atom X-ray and prompt gamma spectroscopy for non-destructive Isotopic analysis for cultural heritage

Development and implementation of a non-destructive analysis technique based on negative muons at the ISIS neutron and muon source (UK)

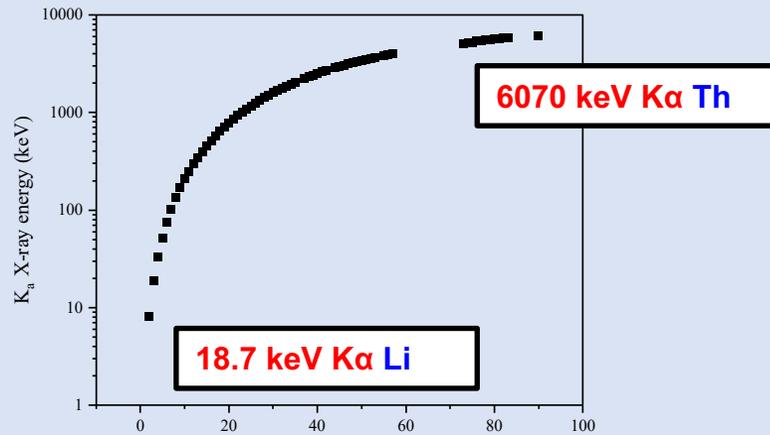

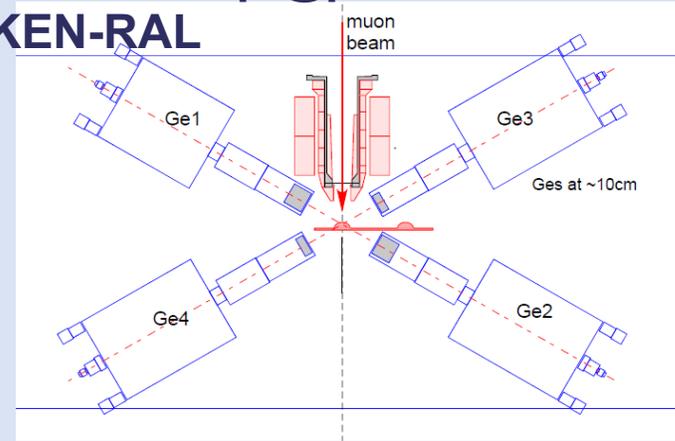

μ -XES is based on the detection of the **characteristic radiation of the emitting atom**, that can be used for material characterization (**0.01 – 6 MeV range**).

Current set up @port4 for uXES RIKEN-RAL

μ -XES is based on the detection of the **characteristic radiation of the emitting atom**, that can be used for material characterization (0.01 – 6 MeV range)

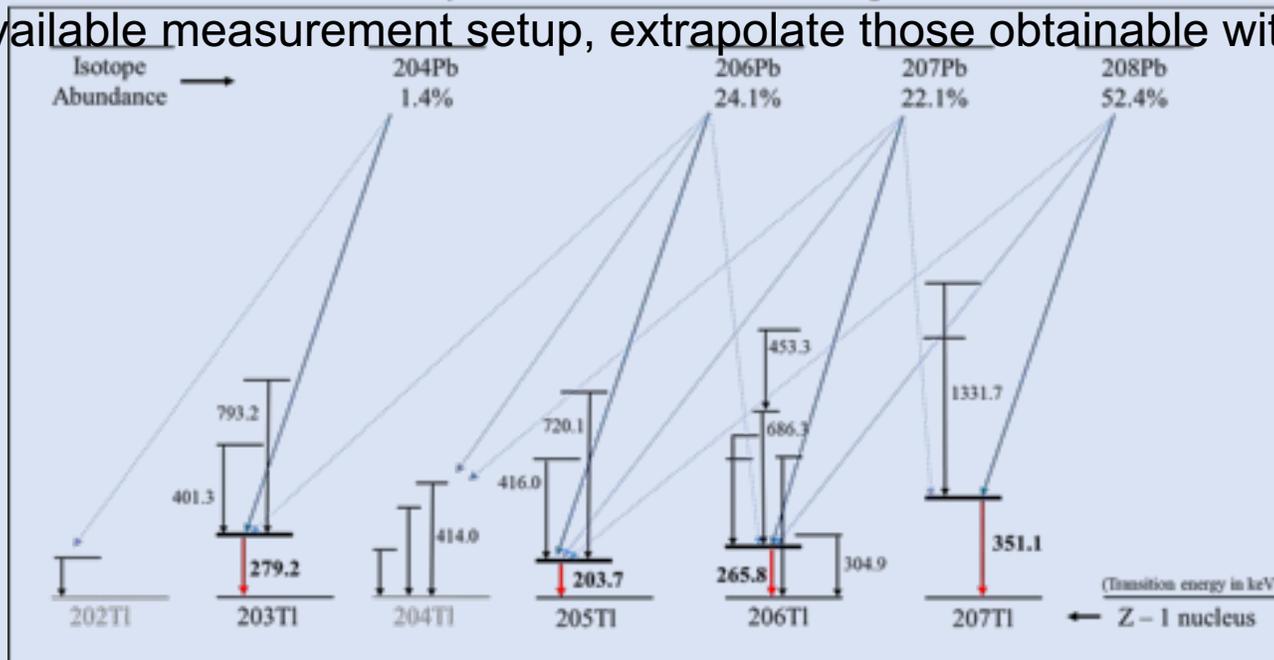

@port4	Dimensions
GMX20P4 Upstream High energy	54.8x49.8 mm
GEM-S5020P4-B Upstream Low energy	49.5x22.3 mm
GEM20P4-70-PL Downstream High energy	56.7x39.7 mm
GEM-S5020P4-B Downstream Low energy	49.6x22.8 mm
Total active volume	300 cm³

CHNET-MAXI Experiment level up: methodology

By irradiation of isotopically enriched material in lead isotopes 204-206-207-208, study all the possible "figures of merit»:

- isomeric "shift" of muon X-rays (about 15 keV energy shift for Lead Ka X-rays)
- **prompt gamma reactions following simple muon capture or with neutron emission**
- *activated radionuclides having characteristic half-lives and gamma emissions.*

By Monte Carlo simulations, sensitivity study of all possible "figures of merit" (from the results obtained with the available measurement setup, extrapolate those obtainable with a high efficiency HPGe array)

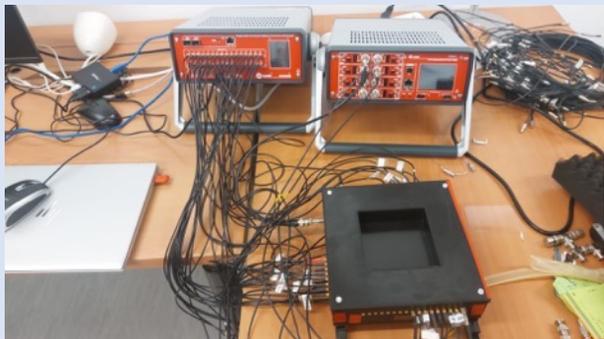

With 1 or 2 neutron emission

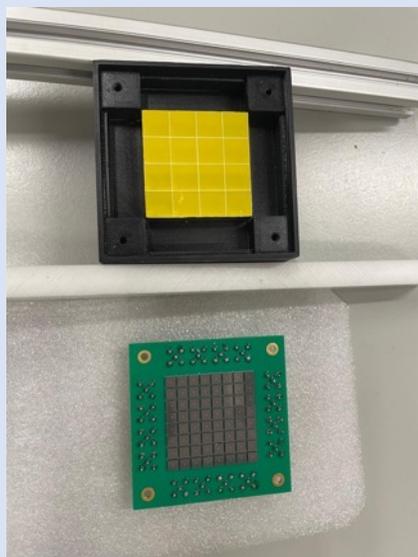

MAXRS: Detectors development

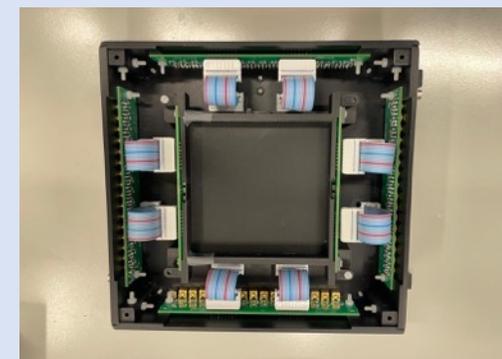

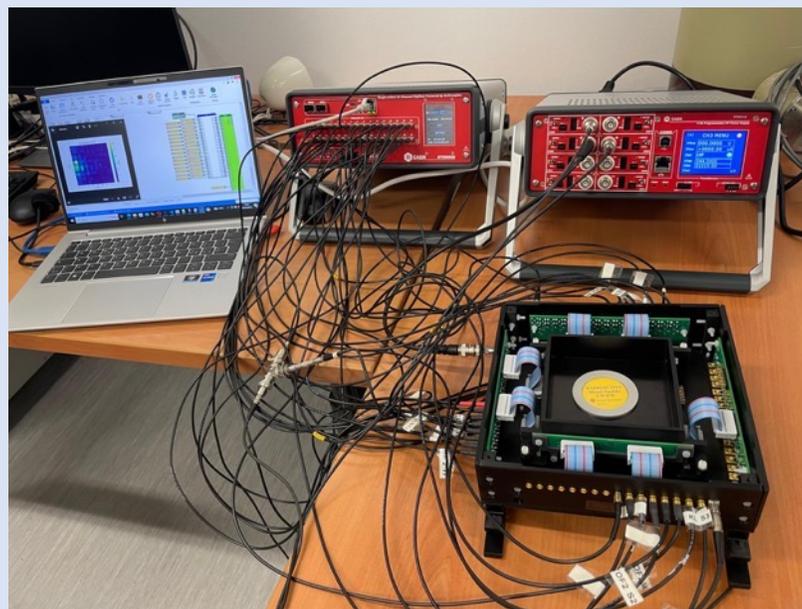

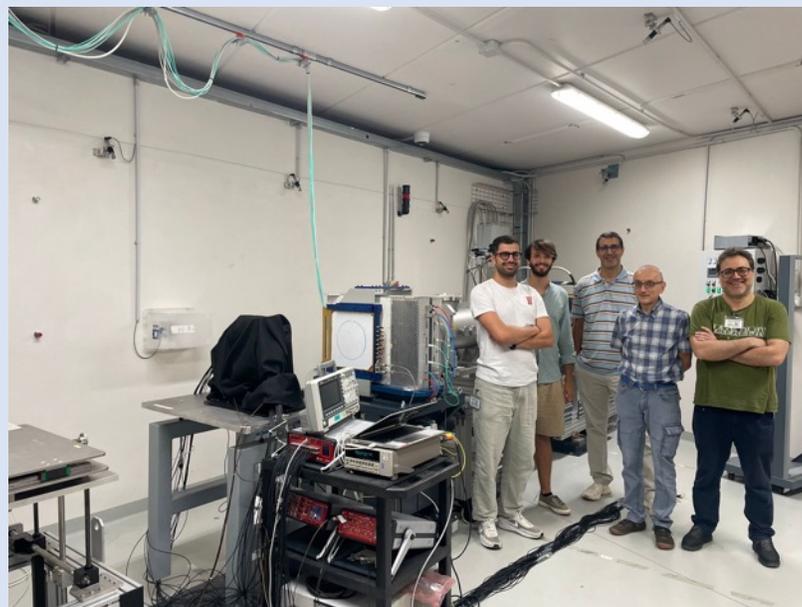

DAQ openFPGA con SciCompiler

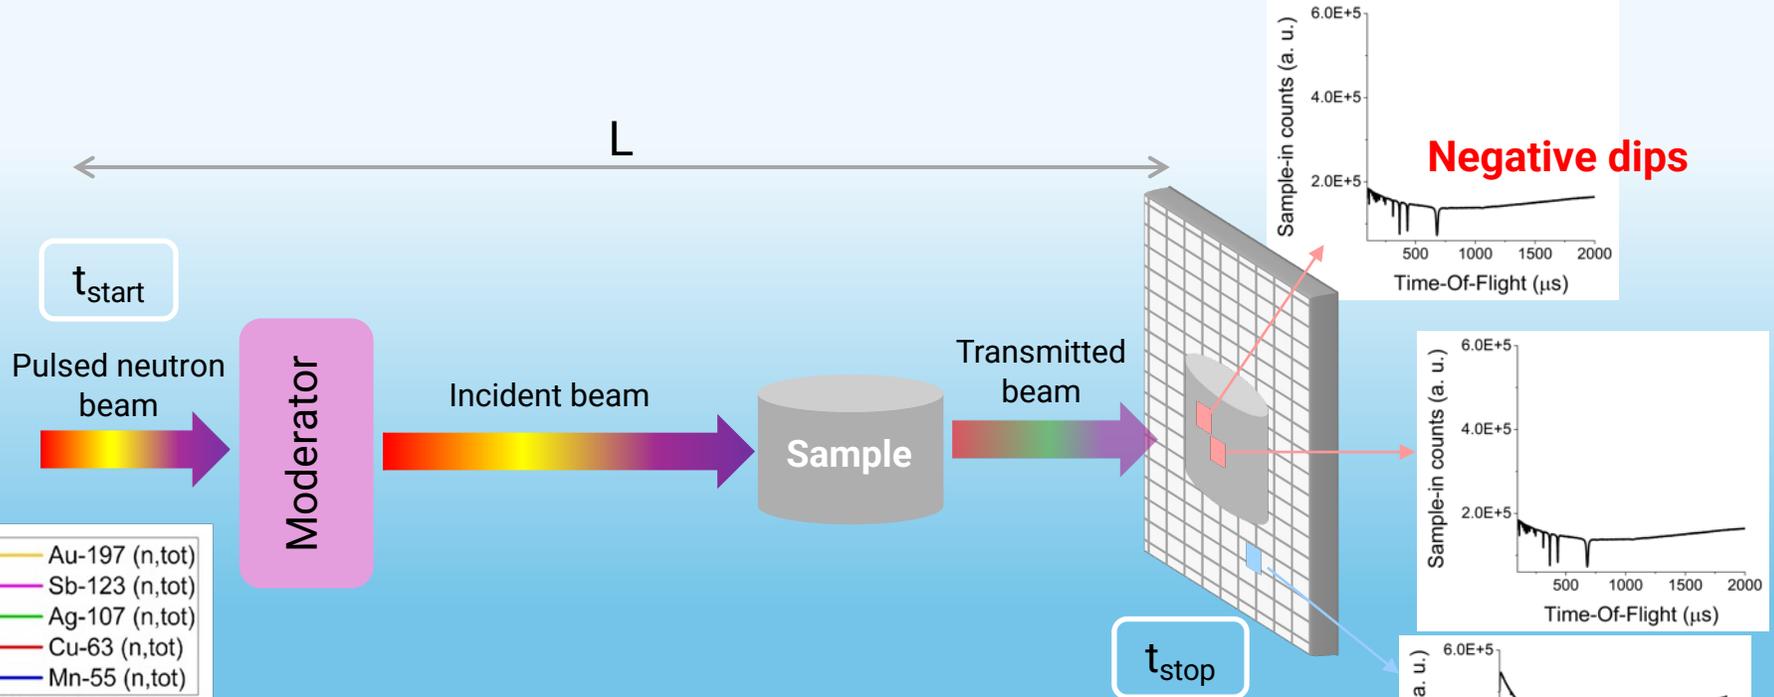

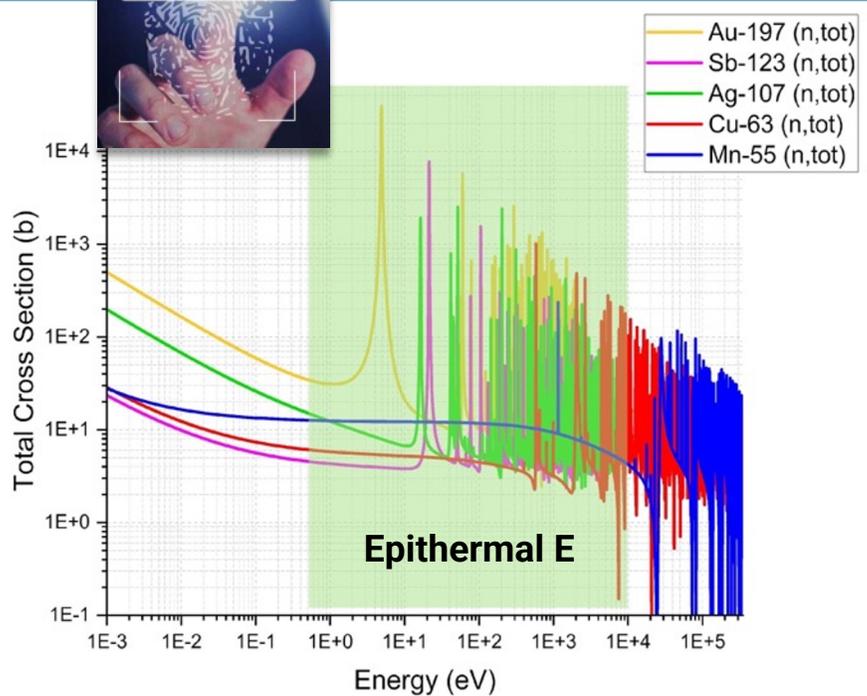

CLLB neutron/gamma PSD Day 16 canali GAGG-HR

Characterization of Muon Beam Monitor at CNAO

Neutron Resonance Transmission Imaging

Non-destructive method for determining **elemental and isotopic distribution** inside objects

Based on the **resonance structures** in neutron induced reaction cross-sections

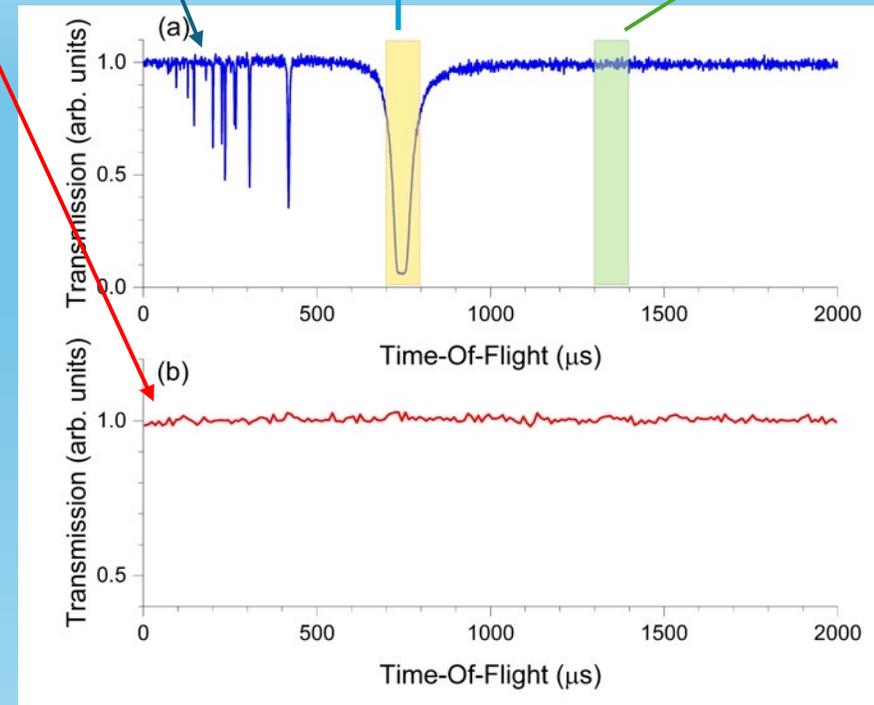

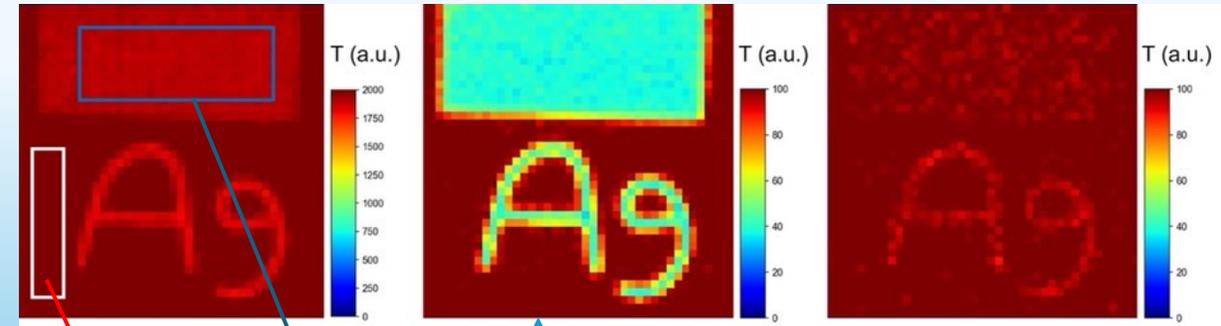

ISIS Neutron and Muon Source

Neutron Resonance Transmission Imaging

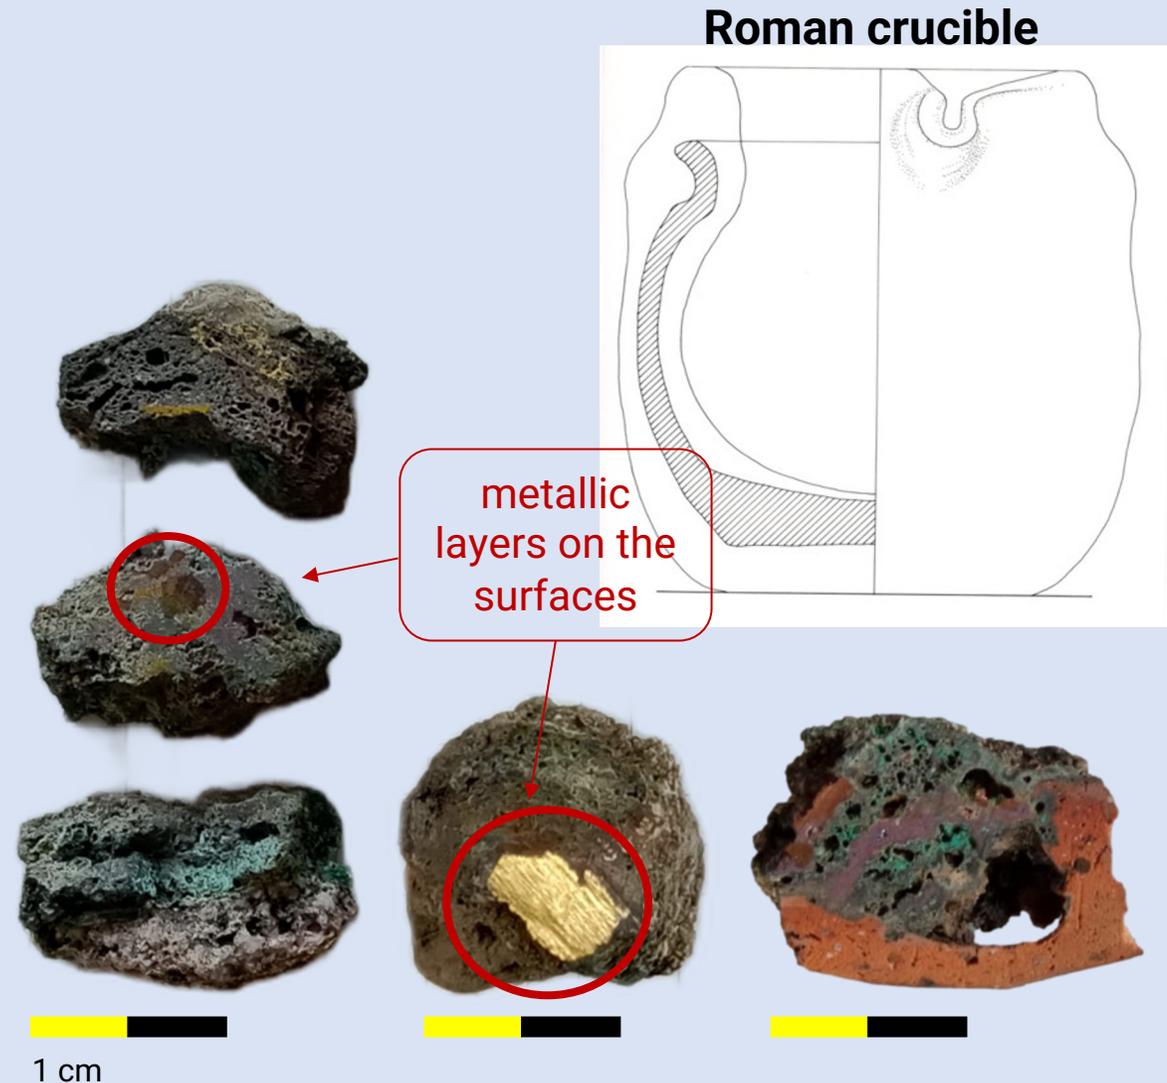

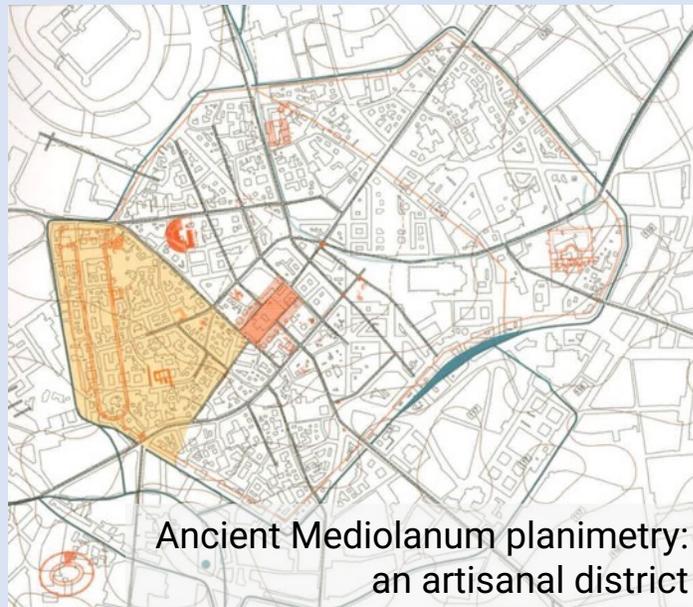

- Sviluppo di tecnica di imaging neutronico presso la sorgente neutronica ISIS (UK) basato su assorbimento risonante di neutroni epitermici per lo studio della composizione elementare ed isotopica di materiali disomogenei.

Cultural Heritage applications

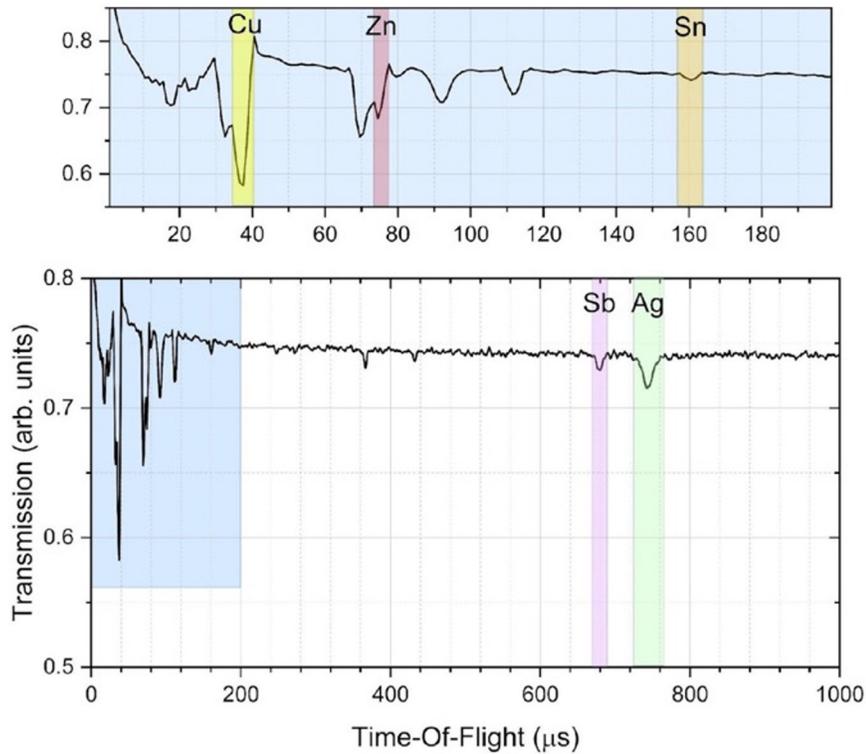

Brass production in Italy in Roman times:

- Excavation of Corso di Porta Romana in Milan (Italy)
- Crucible fragments connected to **bronze and brass production**, datable between the end of I and the beginning of II century AD.
- Activity of at least one **workshop** in the Roman city of *Mediolanum*.

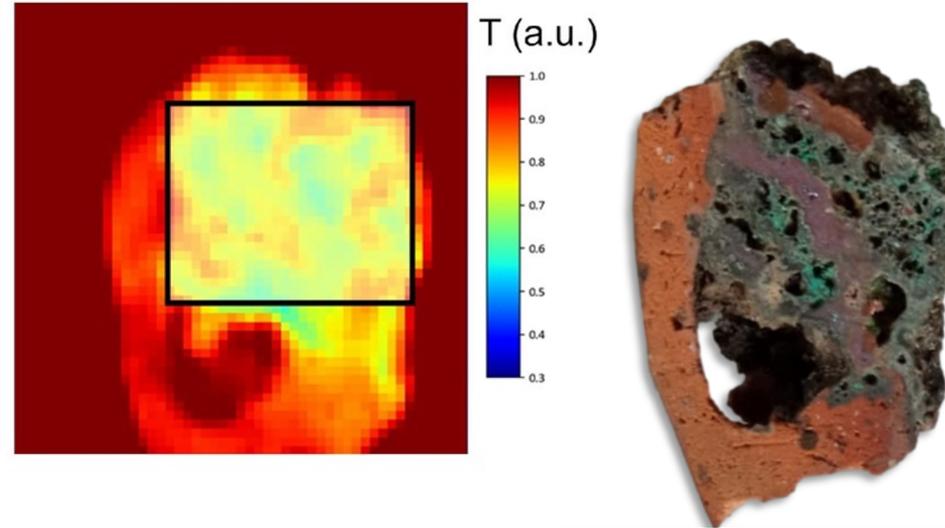

Bulk composition of the fragment?

NRTI: bulk composition

Fragment with no metallic deposition on the surface

PIXE: below detection limit

Sample	Description	Mg	Al	Si	P	Cl	K	Ca	Fe	Ni	Cu	Zn	Ga	As	Ag	Sn	Sb	Pb #La

IPERION HS

Progetto GEMMAE

*Glass-gems Exploration by
Multidisciplinary Methods, Analyses
and Experiments*

In collaborazione col Museo Archeologico Nazionale di Aquileia e con le Università di Pavia e La Statale di Milano.

Sono stati ottenuti accessi presso le grandi infrastrutture di ricerca: AGLAE (Museo del Louvre, Parigi, FR), e MOLAB-ERIHS.it per misure *in situ*.
