VBS example in RDataFrame
[Tommaso Tedeschi](#)

ICSC & Spoke2 Where are we now? - 10/12 Dec 2024 - Catania

RDataFrame's 2017 SSWW VBS with tau

The analysis with CMS detector of the [scattering \(VBS\) of two same-sign W bosons decaying to a hadronic tau and a light lepton](#) was taken as benchmark to test a pure RDataFrame-based approach on the CMS INFN Analysis Facility

$$q\bar{q} \rightarrow W^\pm W^\pm q\bar{q} \rightarrow \tau_h^\pm \nu_\tau \ell^\pm \nu_\ell q\bar{q}$$

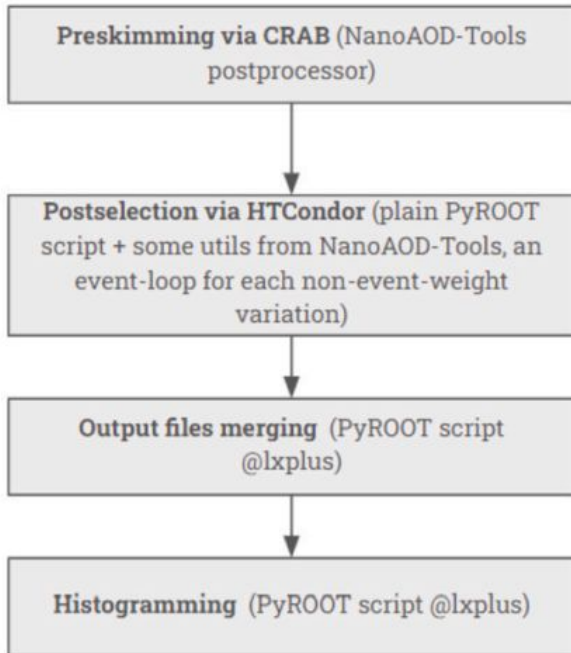

The physics analysis was converted from a legacy iterative approach to an RDataFrame-based approach

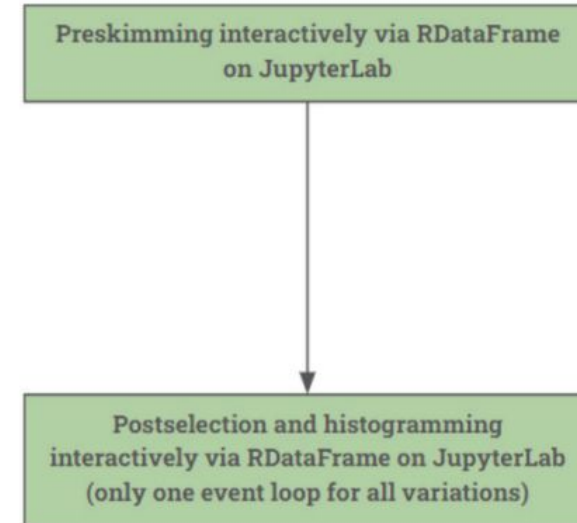

The flow

Legacy implementation

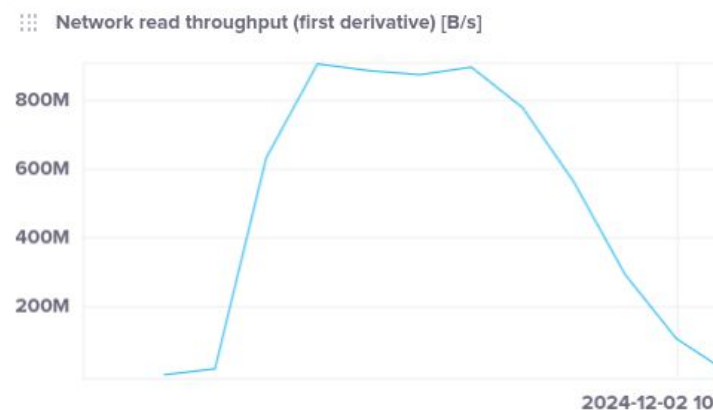

New implementation

Benchmarks

We demonstrated a gain of one order of magnitude in terms of time with respect to a batch-like approach, see the dedicated paper [\[1\]](#)

- In particular, preprocessing on ~1 TB 2017 MC samples (filtering and corrections computation) stored at Legnaro Production done with user CPU usage at 80/90 % and network read throughput at 800/900 MB/s

Benchmark run on
**96 CPUs at
Legnaro
production tier2
site**
