### Relativistic spin operator

Paweł Caban

University of Łódź, Łódź, Poland

Quantum Observables for Collider Physics 2025 Florence, April 10th, 2025

Concept of a quantum state plays a central role in the discussion of entanglement, Bell inequality violation, steering etc.

▲□▶ ▲□▶ ▲ 三▶ ▲ 三▶ 三三 - のへぐ

Concept of a quantum state plays a central role in the discussion of entanglement, Bell inequality violation, steering etc.

State is expressed in a certain basis:

$$\rho = \rho_{\alpha\beta} |\alpha\rangle \langle\beta|.$$

▲□▶ ▲□▶ ▲ 三▶ ▲ 三▶ 三三 - のへぐ

Concept of a quantum state plays a central role in the discussion of entanglement, Bell inequality violation, steering etc.

State is expressed in a certain basis:

 $\rho = \rho_{\alpha\beta} |\alpha\rangle \langle\beta|.$ 

In particle physics basis vectors correspond to particles with definite four-momentum and spin:

 $|k,\sigma\rangle$ ,

- k four-momentum of a particle,
- $\sigma$  spin projection along given axis.

Concept of a quantum state plays a central role in the discussion of entanglement, Bell inequality violation, steering etc.

State is expressed in a certain basis:

 $\rho = \rho_{\alpha\beta} |\alpha\rangle \langle\beta|.$ 

In particle physics basis vectors correspond to particles with definite four-momentum and spin:

 $|k,\sigma\rangle$ ,

k – four-momentum of a particle,

 $\sigma$  – spin projection along given axis.

How the states  $|k, \sigma\rangle$  are defined?

▲□▶▲圖▶▲≧▶▲≧▶ ≧ のへで

The vectors  $|k, \sigma\rangle$  span the carrier space of the irreducible massive representation of the Poincaré group  $\mathcal{H}$ .

The vectors  $|k, \sigma\rangle$  span the carrier space of the irreducible massive representation of the Poincaré group  $\mathcal{H}$ .

The standard Poincaré algebra

$$\begin{split} & [J_i, J_j] = i\varepsilon_{ijk}J_k, & [K_i, K_j] = -i\varepsilon_{ijk}J_k, \\ & [J_i, K_j] = i\varepsilon_{ijk}K_k, & [K_i, P_j] = -iP_0\delta_{ij}, \\ & [J_i, P_j] = i\varepsilon_{ijk}P_k, & [K_i, P_0] = -iP_i, \\ & [J_i, P_0] = [P_i, P_0] = [P_0, P_0] = 0. \\ & J_{ij} \equiv \varepsilon_{ijk}J_k, \quad J_{0i} \equiv K_i, \qquad J_{\mu\nu} = -J_{\nu\mu}, \qquad J_k = \frac{1}{2}\varepsilon_{ijk}J_{ij}. \end{split}$$

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ ● ● ●

 $R(\Lambda, k) = L_{\Lambda k}^{-1} \Lambda L_k$  is a rotation, so called Wigner rotation,  $\mathcal{D}^s$  - spin *s* irreducible, unitary representation of the rotation group SO(3).

The standard Wigner procedure leads to  $(\Lambda - \text{Lorentz transformation})$ 

$$U(\Lambda)|k,\sigma
angle=\mathcal{D}^{s}_{\lambda\sigma}(R(\Lambda,k))|\Lambda k,\lambda
angle,$$

 $R(\Lambda, k) = L_{\Lambda k}^{-1} \Lambda L_k$  is a rotation, so called Wigner rotation,  $\mathcal{D}^s$  - spin *s* irreducible, unitary representation of the rotation group SO(3).

To obtain this formula one generates the vectors  $|k,\sigma\rangle$  from the standard vector  $|\tilde{k},\sigma\rangle$ :

$$|k,\sigma\rangle = U(L_k)|\tilde{k},\sigma\rangle,$$

 $\tilde{k} = m(1, 0, 0, 0)$  – four-momentum of a particle at rest,  $L_k$  – standard boost defined by conditions  $k = L_k \tilde{k}$ ,  $L_{\tilde{k}} = I$ .

The standard Wigner procedure leads to  $(\Lambda - \text{Lorentz transformation})$ 

$$U(\Lambda)|k,\sigma\rangle = \mathcal{D}^{s}_{\lambda\sigma}(R(\Lambda,k))|\Lambda k,\lambda
angle,$$

 $R(\Lambda, k) = L_{\Lambda k}^{-1} \Lambda L_k$  is a rotation, so called Wigner rotation,  $\mathcal{D}^s$  - spin *s* irreducible, unitary representation of the rotation group SO(3).

To obtain this formula one generates the vectors  $|k, \sigma\rangle$  from the standard vector  $|\tilde{k}, \sigma\rangle$ :

$$|k,\sigma\rangle = U(L_k)|\tilde{k},\sigma\rangle,$$

 $\tilde{k} = m(1,0,0,0)$  – four-momentum of a particle at rest,  $L_k$  – standard boost defined by conditions  $k = L_k \tilde{k}$ ,  $L_{\tilde{k}} = I$ .  $\sigma$  – spin of a particle at rest.

How to define spin operator for a relativistic particle?

How to define spin operator for a relativistic particle? In the space  $\mathcal{H}$  there exists a well-defined square of the spin operator

$$\hat{\textbf{S}}^2 = s(s+1)\textbf{I} = -rac{1}{m^2}W^{\mu}W_{\mu},$$

s – spin of a particle,  $\hat{W}^{\mu} = \frac{1}{2} \epsilon^{\nu\gamma\delta\mu} \hat{P}_{\nu} \hat{J}_{\gamma\delta}$  – the Pauli-Lubanski four-vector, ( $\epsilon^{0123} = 1$ ),  $\hat{J}_{\mu\nu}$  – the generators of the Lorentz group.

It does not determine  $\hat{S}$ .

How to define spin operator for a relativistic particle?

In the space  $\ensuremath{\mathcal{H}}$  there exists a well-defined square of the spin operator

$$\hat{\textbf{S}}^2 = s(s+1)\textbf{I} = -rac{1}{m^2}W^{\mu}W_{\mu},$$

s – spin of a particle,  $\hat{W}^{\mu} = \frac{1}{2} \epsilon^{\nu\gamma\delta\mu} \hat{P}_{\nu} \hat{J}_{\gamma\delta} - \text{the Pauli-Lubanski four-vector, } (\epsilon^{0123} = 1),$   $\hat{J}_{\mu\nu} - \text{the generators of the Lorentz group.}$ 

#### It does not determine $\hat{S}$ .

Spin can be defined as a difference between total angular momentum  $\hat{J}$  and the orbital angular momentum  $\hat{L} = \hat{Q} \times \hat{P}$ :

$$\label{eq:static} \hat{\boldsymbol{S}} = \hat{\boldsymbol{J}} - \hat{\boldsymbol{Q}} \times \hat{\boldsymbol{P}}.$$

The spin operator  $\hat{\boldsymbol{S}}_{\textit{NW}}$  acts on one-particle states according to

$$\hat{\mathbf{S}}_{NW}|k,\sigma
angle=\mathbf{S}_{\lambda\sigma}|k,\lambda
angle,$$

where  $S^i$  are standard quantum mechanical spin matrices. For spin s=1/2

$$S^i = \frac{1}{2}\sigma_i, \qquad \sigma_i - \text{Pauli matrices.}$$

For spin s = 1:

$$S^{1} = \frac{1}{\sqrt{2}} \begin{pmatrix} 0 & 1 & 0 \\ 1 & 0 & 1 \\ 0 & 1 & 0 \end{pmatrix}, \ S^{2} = \frac{i}{\sqrt{2}} \begin{pmatrix} 0 & -1 & 0 \\ 1 & 0 & -1 \\ 0 & 1 & 0 \end{pmatrix}, \ S^{3} = \begin{pmatrix} 1 & 0 & 0 \\ 0 & 0 & 0 \\ 0 & 0 & -1 \end{pmatrix}$$

▲□▶ ▲□▶ ▲ 三▶ ▲ 三▶ 三 のへぐ

One can try to define a relativistic spin operator using other principles and omitting ambiguities related to a position operator.

▲□▶ ▲□▶ ▲ 三▶ ▲ 三▶ 三 のへぐ

One can try to define a relativistic spin operator using other principles and omitting ambiguities related to a position operator.

Such an approach has been used in many papers, a lot of them have been devoted to a spin operator for a Dirac particle.

▲□▶ ▲□▶ ▲ 三▶ ▲ 三▶ 三 のへぐ

Definitions of various relativistic spin operators for a Dirac particle which appear in the literature:

1. 
$$\hat{\mathbf{S}}_{D} = -\frac{1}{2}\hat{\mathbf{\Sigma}}$$
2. 
$$\hat{\mathbf{S}}_{NW} = -\frac{|\hat{P}^{0}|}{2m}\hat{\mathbf{\Sigma}} + \frac{\hat{\mathbf{P}}(\hat{\mathbf{P}}\cdot\hat{\mathbf{\Sigma}})}{2m(m+|\hat{P}^{0}|)} + \frac{i\hat{P}^{0}}{2m|\hat{P}^{0}|}\hat{\mathbf{P}} \times \mathbf{\alpha}$$
3. 
$$\hat{\mathbf{S}}_{FW} = -\frac{1}{2}\hat{\mathbf{\Sigma}} - \frac{i\beta}{2|\hat{P}^{0}|}\hat{\mathbf{P}} \times \mathbf{\alpha} + \frac{\hat{\mathbf{P}} \times (\hat{\mathbf{\Sigma}} \times \hat{\mathbf{P}})}{2|\hat{P}^{0}|(m+|\hat{P}^{0}|)}$$
4. 
$$\hat{\mathbf{S}}_{C} = -\frac{m^{2}}{2\hat{P}^{0^{2}}}\hat{\mathbf{\Sigma}} - \frac{im\beta}{2\hat{P}^{0^{2}}}\hat{\mathbf{P}} \times \mathbf{\alpha} - \frac{\hat{\mathbf{P}}\cdot\hat{\mathbf{\Sigma}}}{2\hat{P}^{0^{2}}}\hat{\mathbf{P}}$$
5. 
$$\hat{\mathbf{S}}_{F} = -\frac{1}{2}\hat{\mathbf{\Sigma}} - \frac{i\beta}{2m}\hat{\mathbf{P}} \times \mathbf{\alpha}$$
6. 
$$\hat{\mathbf{S}}_{Ch} = -\frac{1}{2}\hat{\mathbf{\Sigma}} + \frac{i}{2m}\hat{\mathbf{P}} \times \mathbf{\alpha} - \frac{\hat{\mathbf{P}} \times (\hat{\mathbf{\Sigma}} \times \hat{\mathbf{P}})}{2m(m+|\hat{P}^{0}|)}$$
7. 
$$\hat{\mathbf{S}}_{P} = -\frac{1}{2}\beta\hat{\mathbf{\Sigma}} - \frac{i\alpha_{3}\alpha_{2}\alpha_{1}(\beta+1)\mathbf{\alpha}\cdot\hat{\mathbf{P}}}{2\hat{\mathbf{P}}^{2}}\hat{\mathbf{P}}$$

 $\Sigma = \frac{1}{2i} \alpha \times \alpha$ ,  $\beta = \gamma^0$ ,  $\alpha = \gamma^0 \gamma$ ,  $\gamma^{\mu}$  – Dirac matrices.

Definitions of various relativistic spin operators for a Dirac particle which appear in the literature:

1. 
$$\hat{\mathbf{S}}_{D} = -\frac{1}{2}\hat{\mathbf{\Sigma}}$$
2. 
$$\hat{\mathbf{S}}_{NW} = -\frac{|\hat{P}^{0}|}{2m}\hat{\mathbf{\Sigma}} + \frac{\hat{\mathbf{P}}(\hat{\mathbf{P}}\cdot\hat{\mathbf{\Sigma}})}{2m(m+|\hat{P}^{0}|)} + \frac{i\hat{P}^{0}}{2m|\hat{P}^{0}|}\hat{\mathbf{P}} \times \alpha$$
3. 
$$\hat{\mathbf{S}}_{FW} = -\frac{1}{2}\hat{\mathbf{\Sigma}} - \frac{i\beta}{2|\hat{P}^{0}|}\hat{\mathbf{P}} \times \alpha + \frac{\hat{\mathbf{P}} \times (\hat{\mathbf{\Sigma}} \times \hat{\mathbf{P}})}{2|\hat{P}^{0}|(m+|\hat{P}^{0}|)}$$
4. 
$$\hat{\mathbf{S}}_{C} = -\frac{m^{2}}{2\hat{P}^{0^{2}}}\hat{\mathbf{\Sigma}} - \frac{im\beta}{2\hat{P}^{0^{2}}}\hat{\mathbf{P}} \times \alpha - \frac{\hat{\mathbf{P}}\cdot\hat{\mathbf{\Sigma}}}{2\hat{P}^{0^{2}}}\hat{\mathbf{P}}$$
5. 
$$\hat{\mathbf{S}}_{F} = -\frac{1}{2}\hat{\mathbf{\Sigma}} - \frac{i\beta}{2m}\hat{\mathbf{P}} \times \alpha$$
6. 
$$\hat{\mathbf{S}}_{Ch} = -\frac{1}{2}\hat{\mathbf{\Sigma}} + \frac{i}{2m}\hat{\mathbf{P}} \times \alpha - \frac{\hat{\mathbf{P}} \times (\hat{\mathbf{\Sigma}} \times \hat{\mathbf{P}})}{2m(m+|\hat{P}^{0}|)}$$
7. 
$$\hat{\mathbf{S}}_{P} = -\frac{1}{2}\beta\hat{\mathbf{\Sigma}} - \frac{i\alpha_{3}\alpha_{2}\alpha_{1}(\beta+1)\alpha\cdot\hat{\mathbf{P}}}{2\hat{\mathbf{P}}^{2}}\hat{\mathbf{P}}$$

 $\Sigma = \frac{1}{2i}\alpha \times \alpha$ ,  $\beta = \gamma^0$ ,  $\alpha = \gamma^0\gamma$ ,  $\gamma^{\mu}$  – Dirac matrices. D – Dirac, NW – Newton-Wigner, FW – Foldy-Wouthuysen (mean-spin operator), C – Czachor, F – Frenkel, Ch – Chakrabarti, P –Pryce.
