

An update of the DIRAC result on the pion-pion $|a_0-a_2|$ scattering length

Tuesday, 22 May 2007 18:30 (20 minutes)

DIRAC aims at measuring the scattering length $|a_0-a_2|$ through the lifetime of the $\pi^+\pi^-$ atom in its 1S state. The published result (Physics Letters B 619 (2005)) used only part of the totally collected statistics. An update of the result concerning the statistical accuracy will be presented.
