

ISTITUTO NAZIONALE
DI GEOFISICA E VULCANOLOGIA

Il contributo di INGV

Marco Olivieri, INGV - Bologna

INGV activities in ET collaboration

INGV RU ET (leader Carlo Giunchi)

- 20 people from different section
- competences: geophysics, seismology, geodesy, gravimetry, ground deformation, magnetism, shallow structure characterisation
- significant involvement in Sardinia site characterisation.
- Active role in TETI / BidBook
- contribution in SunLab creation (on hold, waiting for the new INGV President)

Research: FABER, AdriaArray an other

PNRR FABER under completion.

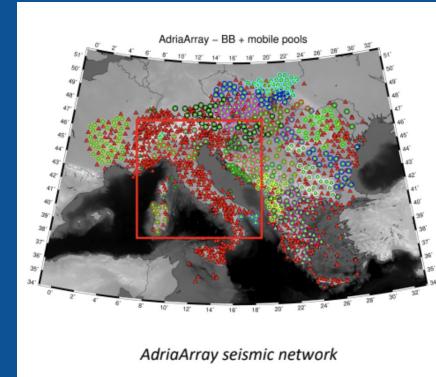

- first temporary experiment completed
- superconducting gravimeter do be installed in summer
- geophysical school planned for October 2025

AdriaArray experiment

- 8 BB stations in Sardinia
- temporary network operational since autumn 2023
- extension requested

WINDPARK impact on ET

- under review (minor revision)

Plans for future activities

Needs:

- to improve the geological model
- to assess the hydro-geological context
- ground deformation
- long-term stability

Under discussion:

- magnetic and magneto-telluric survey
- repeated seismic array analysis at vertices
- long-term impact of earthquakes and deformation (with comparison?)
