

# General Meeting

26 June 2025

# Meeting with referees

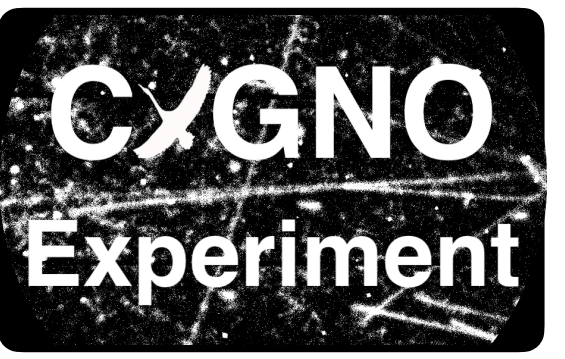

---

- On the 13th June we had a Meeting with the CYGNO INFN-referees;
- The current status of the experiment was presented with a particular focus on the main LIME analyses and on the CYGNO04 construction;
- no particular problems were highlighted by the referees
- the efforts made to carry out the work and the implementation plans submitted were positively received

# Joint WG meeting

---

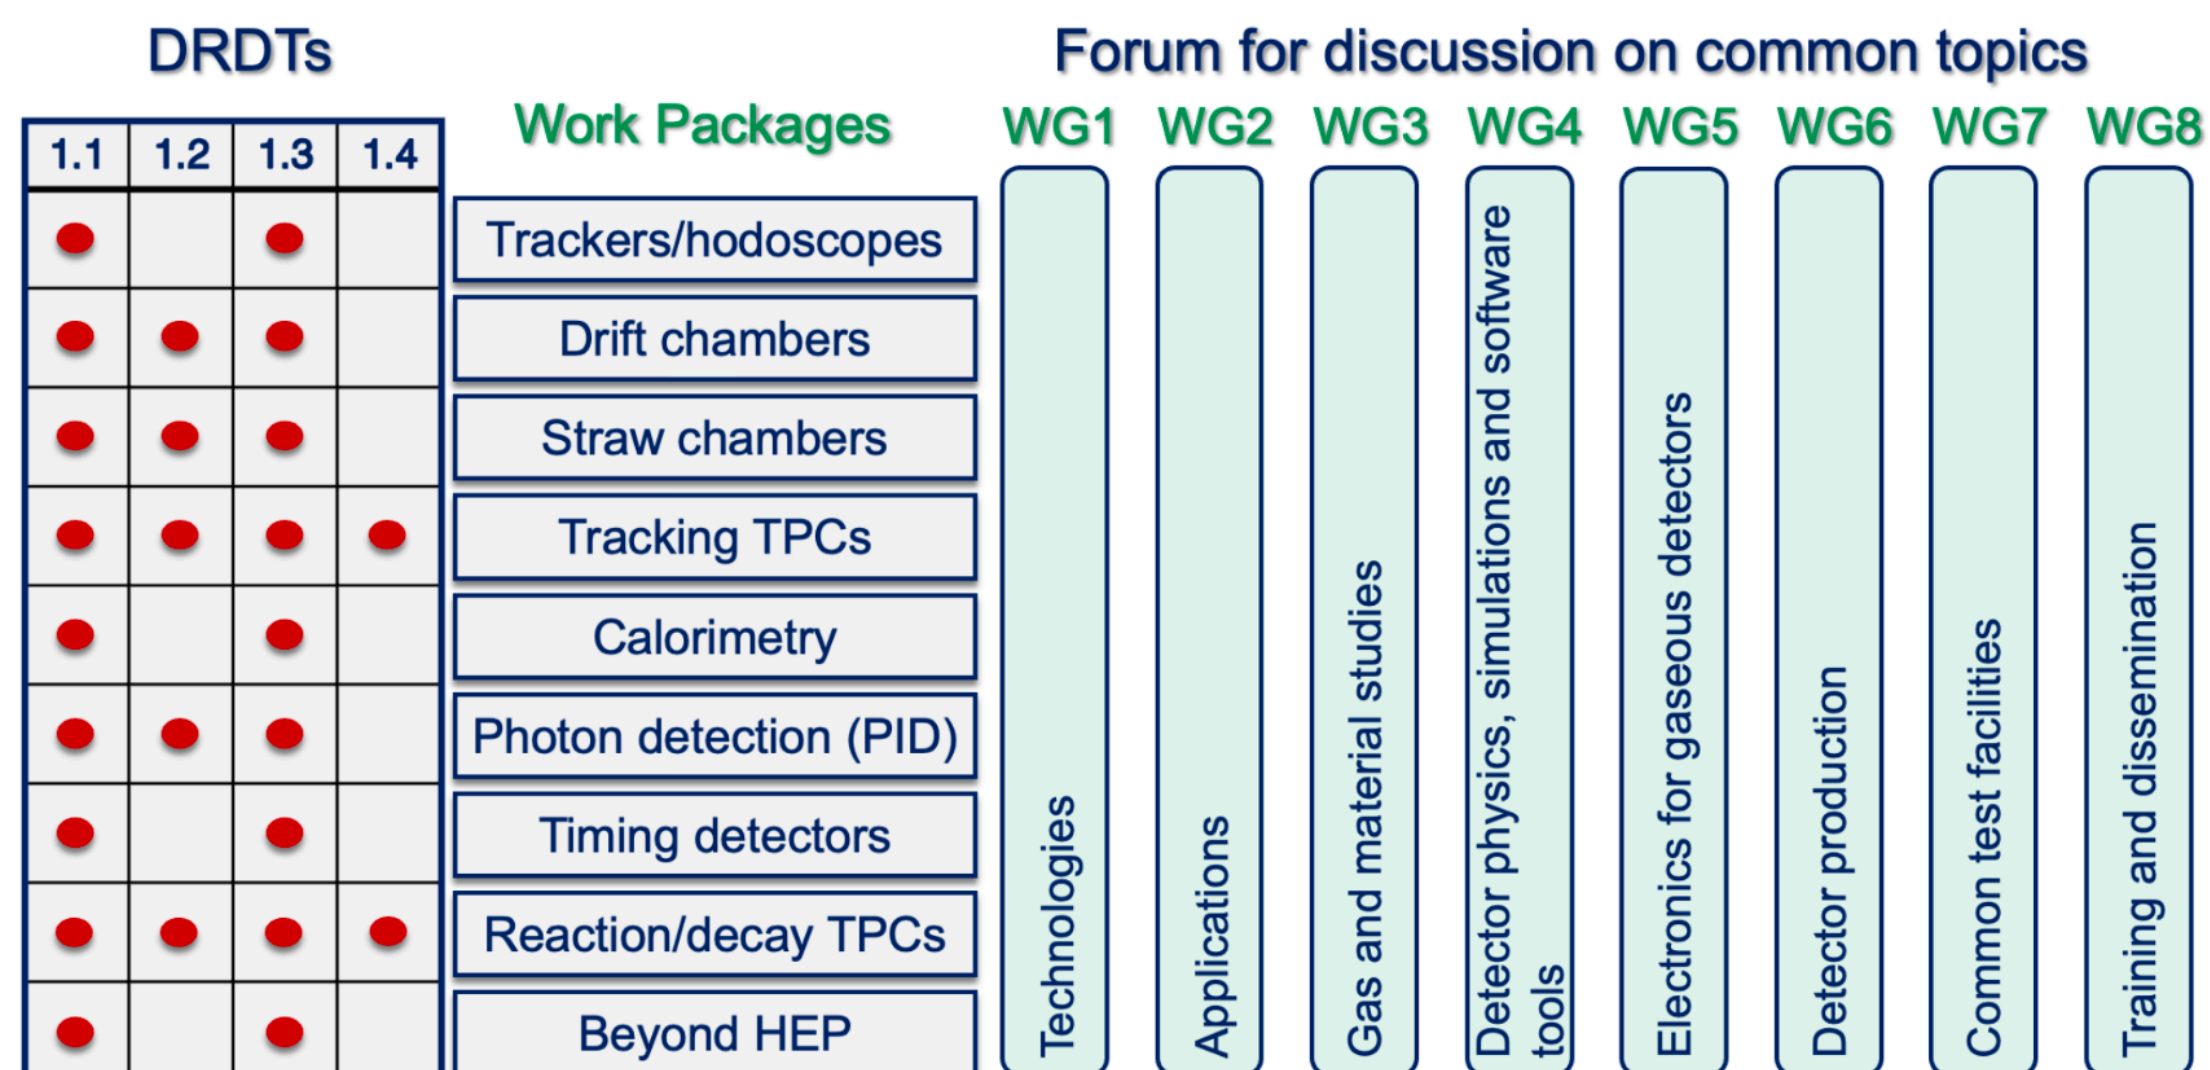

- On the 17 and 18 of June we had a Meeting Joining different WGs to discuss their status and plans with the aim of optimising the efforts toward the realisation of CYGNO04 and the needs for a profitable scientific run;
- Several tasks that need to be prioritised were identified;
- Some of them require a shared effort between different Working Groups (e.g. Analysis and Simulation);
- A summary document is in preparation and will serve to better focusing the activities in the different WGs;
- Surely a useful meeting to be repeated soon after the summer (September?)

# DRD1 activities

- We should have more contact with both the DM community and the community that is developing innovative technologies (for DM and beyond);
- In particular, among others, it would be very useful to have more efficient two-way communication with the CERN-DRD1 collaboration that deals with R&D of gaseous detectors;

- We strongly encourage people to participate to DRD1 meetings, to present CYGNO activities and report interesting results and discussions in the WG meetings;
- anyone interested, please let me know. In the coming weeks we will try to organise ourselves to cover at least the most interesting WGs
