## - thoughts on synchronisation -

**24/03/2025**

**Kristof Schmieden**

## • Analysis strategy

- Combination of frequency domain results

- Time-Domain combination
  - No information on directionality
  - Extracting source direction

- Phase aligned combination of RF (IF) signals

- Single Photon Counting

## • Requirements

- Milli-seconds time-stamping

- time-stamping, 3ms resolution (dist. LNF - Mainz: 1000km)
- < ms: ~ 100 µs

- Phase synchronised RF (IF) clocks
- Exact frequency match of cavities
  - Seems impractical over large distances!

- Minimum readout window: ~10µs
