SuperB: a New Frascati Collider Facility

Sunday, 23 September 2012 16:15 (30 minutes)

An overview of the SuperB, high luminosity B-Factory project in Italy, will be presented. The main design features to reach the very high luminosity requested and a status of progress in the design will be given. The option of using the injector linac for accelerating a ultra low emittance beam for a SASE FEL facility will be also presented.
