# Multi-TeV Muon Collider

**BA BO FE FI GE MI MIB LNF LNL LNS PD PI PV RM1 RM3 TO TS**

*Physics, Detector R&D, MDI, Crystals/Targets, Accelerator Activities*

*RD\_MUCOL @ CSN1 – ESPP\_A\_MUCOL @ GE – UE-MUCOL – UE-I\_FAST*

*125 persone → ~ 35 FTE*

- Progressi notevoli sul disegno della macchina @ 10 TeV
- Disegno esperimento @ 10 TeV → full simulation su canali di fisica benchmark
- R&D su tecnologie di accelerazione (magneti HTS in sinergia)
- R&D su tecnologie di rivelatori (proposta call CSN5) - DRD e test beam

HORIZON-INFRA-2022-DEV-01-01

## LDG review - February 24-26, 2025 @ CERN

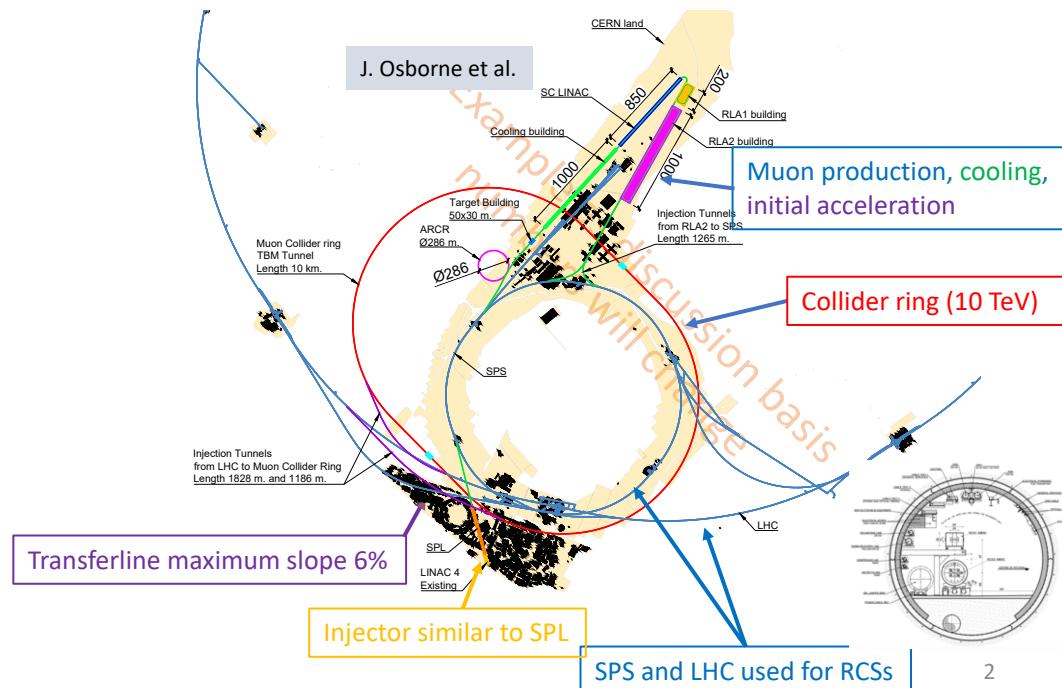

to review:

- R&D plan
- Demonstrator design and proposal

### 10 TeV Muon Collider Beam Requirements

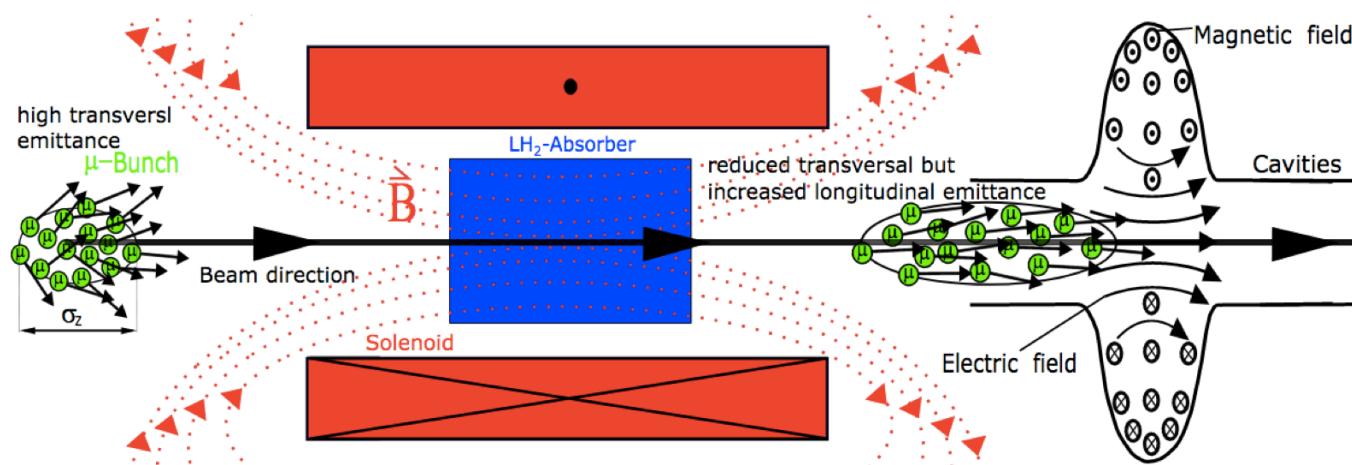

Parameters	Symbol	$\sqrt{s} = 10 \text{ TeV}$
Particle energy [GeV]	E	5000
Luminosity [ $10^{34} \text{ cm}^{-2} \text{ s}^{-1}$ ]	$\mathcal{L}$	20
Bunch population [ $10^{12}$ ]	$N_p$	1.8
Transverse normalized rms emittance [ $\mu\text{m}$ ]	$\varepsilon_n$	25
Longitudinal emittance ( $4\pi \sigma_E \sigma_T$ ) [eVs]	$\varepsilon_l$	0.314
Rms bunch length [mm]	$\sigma_z$	1.5
Relative rms energy spread [%]	$P_T$	0.1
Beta function at IP [mm]	$\beta^*$	1.5
Beam power with 10 Hz repetition rate [MW]	$P_{\text{beam}}$	14.4

- First collider ring site identified @ CERN
- SPS and LHC tunnels reused
- All construction on CERN
- Energy stages maybe 2.5 and 8 TeV

# Muon Cooling and its challenges

- Cooling is necessary after production to reduce the 6D emittance of the captured beam

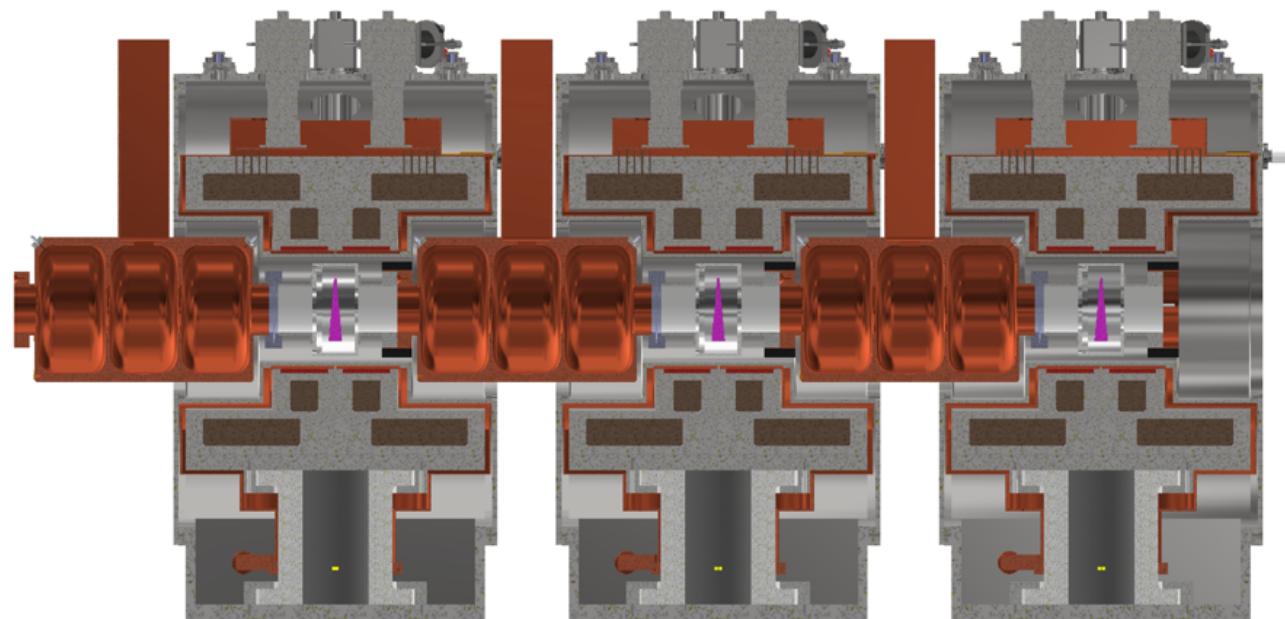

Activities in  
charge to INFN  
Milano

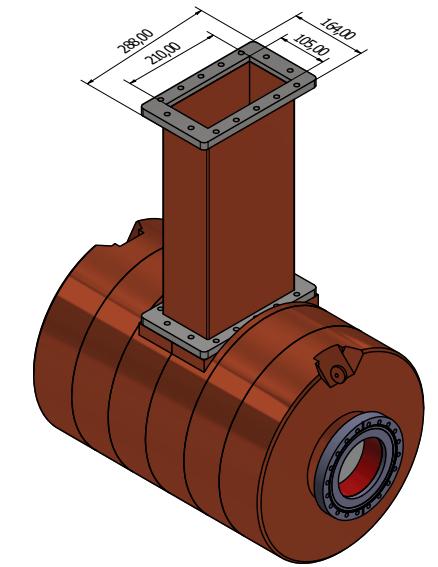

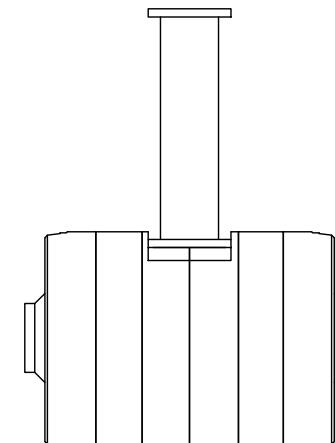

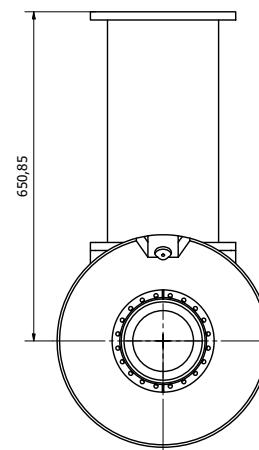

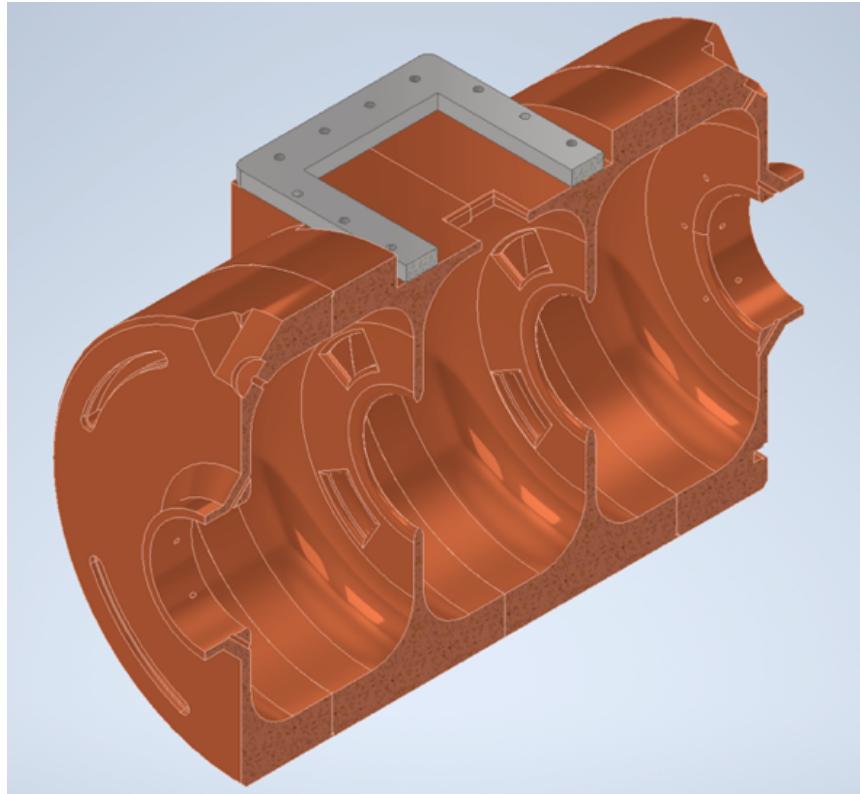

**High magnetic  
field  
superconducting  
solenoids**

**High electric  
field normal  
conducting RF  
cavities**

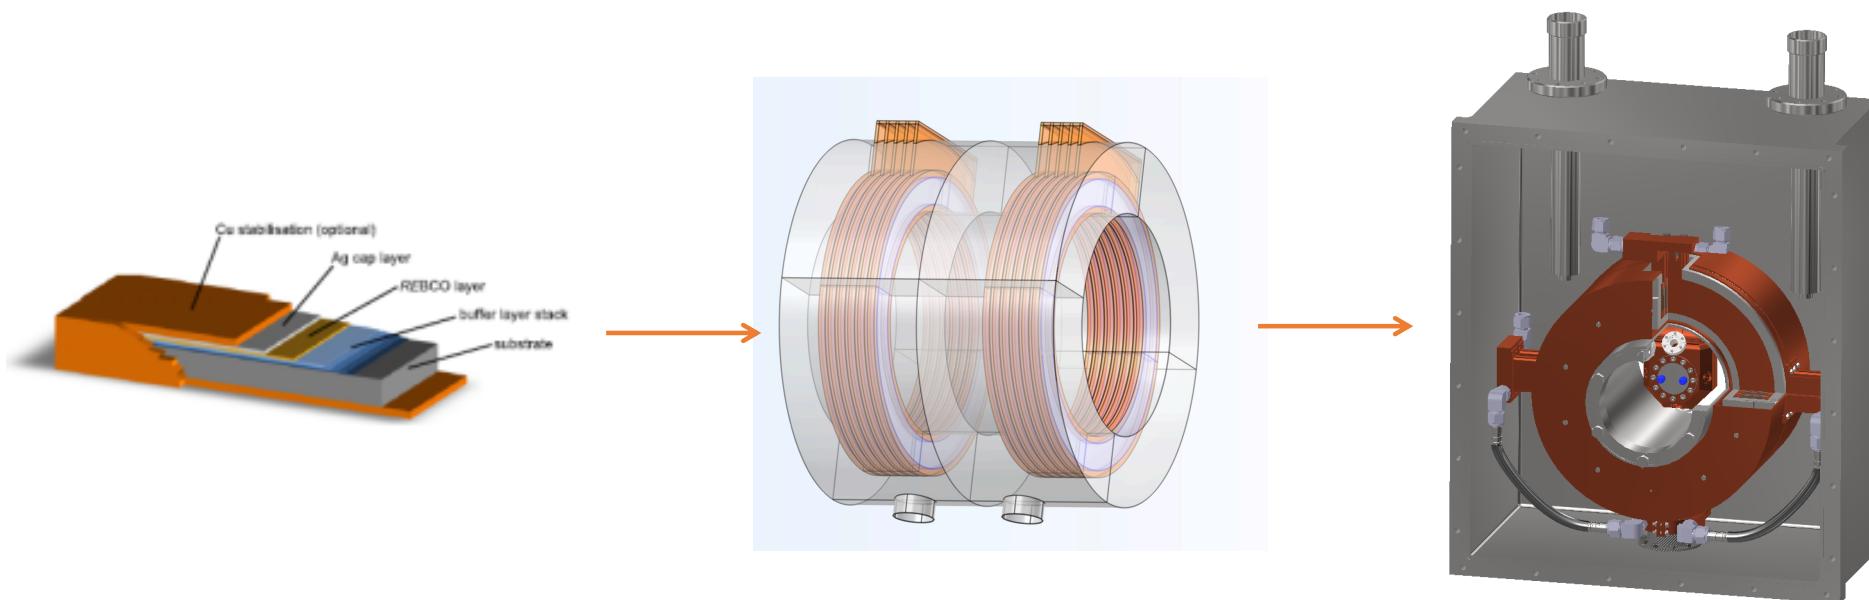

# Cooling Cell Integration study: first concept

# RF 3 cells 704 MHz: first concept

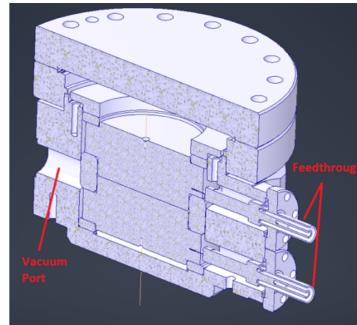

- RFMFTF.1: free bore > 450 mm (> 5 M€) good for 700 MHz test
- RFMFTF.2: free bore ~ 320 mm (> 3 M€) good for 1.3 GHz test
- RFMFTF.3: free bore ~ 180 mm (> 1.5 M€) good for 3 GHz test

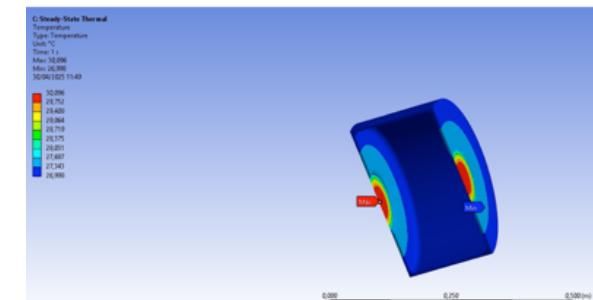

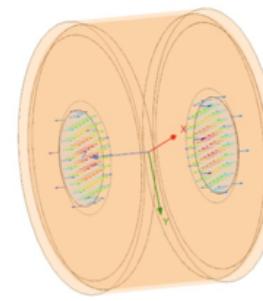

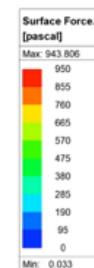

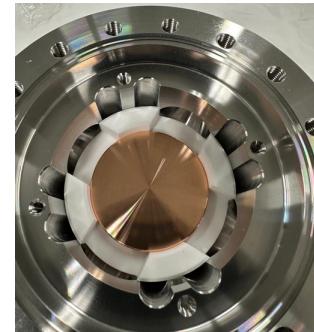

# Test facilities: high electric fields in magnets and RF laminas

The PVX-4110 pulse generator is a direct coupled, air cooled, solid state half-bridge (totem pole) design, offering equally fast pulse rise and fall times, low power dissipation, and virtually no over-shoot, undershoot or ringing. It has overcurrent detection and shutdown circuitry to protect the pulse generator from potential damage due to arcs and shorts in the load or interconnect cable.

Suitable to test different materials, surface finishing and treatments up to 50 MV/m

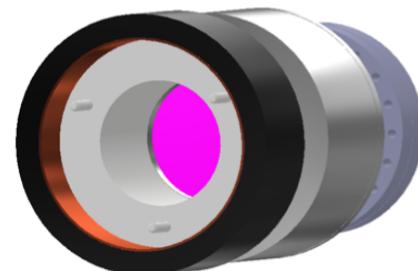

The RF cavities design foresees the presence of thin (100 micron) metallic windows at the cells iris. This will simplify the RF e.m. design but introduces a challenging element related to the mechanical design, the soldering procedures and the capability to sustain RF pressures and thermal stresses.

# Test facilities: Shape Memory Alloy and Pillow Seal Systems

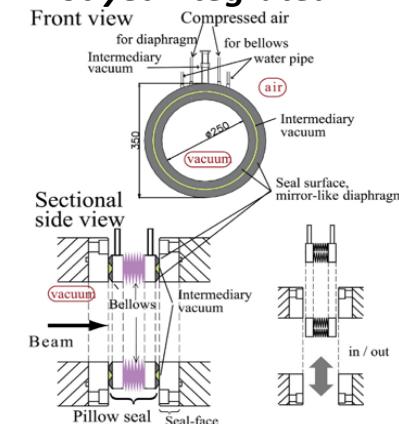

SMA-based UHV chambers with external diameters in the range 15-150 mm,  
DN16,DN25,DN100 pipe compatible.  
Heterogeneous joints (St/Ti,St/Alu,St/Cu)

Requires good pre-alignment

## Pillow seal system *not yet integrated*

# Richieste finanziarie 2026

Capitolo	Descrizione	Parziali (K-EUR)
<b>consumo</b>	forme di avvolgimento e anelli in 316 LN per stress containment	10.00
<b>consumo</b>	Sistema di tenuta da vuoto a memoria di forma	20.00
<b>consumo</b>	Passanti ceramici per vuoto e applicazione HV	5.00
<b>consumo</b>	Schede acquisizione dati	3.00
<b>consumo</b>	Test saldatura ad electron beam di lamine per celle RF	20.00
<b>consumo</b>	Test brasature su rame	7.00
<b>consumo</b>	realizzazione di n. 8 dischi in differenti materiali per test su sistema pulsato HV	15.00
<b>inventario</b>	Nastro HTS per realizzazione bobina	170.00
<b>inventario</b>	Lamine in alluminio a spessore variabile e curve	10.00
<b>inventario</b>	Lamine in Berillio a spessore variabile e curve	15.00
<b>inventario</b>	Lingotto da 100 kg in rame per prototipi celle	18.00
<b>inventario</b>	Guida dâonda lavorata da pieno in rame	3.00
<b>inventario</b>	Flange speciali per guide dâonda	5.00
<b>inventario</b>	Passante ceramico per pickup probe RF (n.3)	15.00
<b>inventario</b>	Sonde di temperatura non a contatto	5.00
<b>inventario</b>	Sensori di spostamento laser (triangolatori micrometrici) e sistema di lettura	4.00

**Totale FTE:**

**Ricercatori:** **3.2**

**Tecnici:** **1.4**
