Progetto EUDAT

Wednesday, 16 May 2012 10:20 (20 minutes)

EUDAT is an European project, co-funded within the 7th Framework Programme. It includes funding agencies that invest in research infrastructures and programmes of research, infrastructure operators and research communities who rely on the availability of data-management services, national data centres and providers of connectivity and, of course, the users who rely on the availability of data and services.

EUDAT is a three-year project that will deliver a Collaborative Data Infrastructure (CDI) with the capacity and capability for meeting future researchers' needs in a sustainable way. CINECA is the fourth partner, among 25, in terms of allocated effort and, in collaboration with INGV, represents the Solid Earth Science community.

Presenter: FIAMENI, Giuseppe (CINECA)

Session Classification: Federazioni di identità per supportare le esigenze della ricerca
