ELMA take-home messages

- Opportunity to get to know about…
  - many ways to pursue the same research
  - many applications of the same specific technology
  - many ways to interpret the data

- We obviously approach the MAPS energy response based on our specific background, which is a potential problem:
  - learning from scratch what others are already very experienced with
  - best experts in a specific technology not being aware of how many smart things one can do with their sensors and knowledge
  - communicating is not always straight-forward

- Need to build a common language and a collaborative framework
  - Should we make an effort to other "ELMAs" occasions?
