

Photon impact factor and k_T -factorization for DIS in the next-to-leading order

sabato 15 settembre 2012 11:30 (20 minuti)

Summary

The photon impact factor for the BFKL pomeron is calculated in the next-to-leading order (NLO) approximation using the operator expansion in Wilson lines.

The result is represented as a NLO k_T -factorization formula for the structure functions of small- x deep inelastic scattering.
