# Relazione al CVI e azioni conseguenti

### **HSE - Observations**

- ☐ INFN has produced a comprehensive environmental report that:
  - ✓ tracks energy consumption, carbon footprint (CO 2 and other greenhouse gas emissions), and water usage.
  - ✓ defines a strategy to increase reliance on renewable energy sources and to reduce direct carbon emissions and water consumption.
- ☐ INFN has a well-organized occupational health and safety system, comprising:
  - ✓ Safeguards in place at the local level
  - ✓ A central coordination structure that defines guidelines and objectives.
  - ✓ A central office responsible for verifying the implementation of these guidelines and ensuring compliance with regulations

#### **HSE - Comments**

- ☐ The environmental report correctly identifies the areas for improvement, particularly regarding the reduction of SF<sub>6</sub> emissions. It also highlights projects aimed at expanding the use of solar energy and reducing water losses that have led to increased consumption.
- ☐ The analysis of occupational accidents provides a generally reassuring picture, as both the number and severity of incidents appear to be quite limited, and the majority of them occur outside the workplace.

## **HSE - Recommendations**

- □ We do not have specific recommendations on the environmental report, which we consider to be quite comprehensive, apart from encouraging INFN to continue monitoring and pursuing the objectives it has already defined.
- ☐ On safety safeguards, we suggest that INFN track near-miss cases, as they can provide useful insights for developing prevention strategies
