The TESLA Collaboration Mission

3

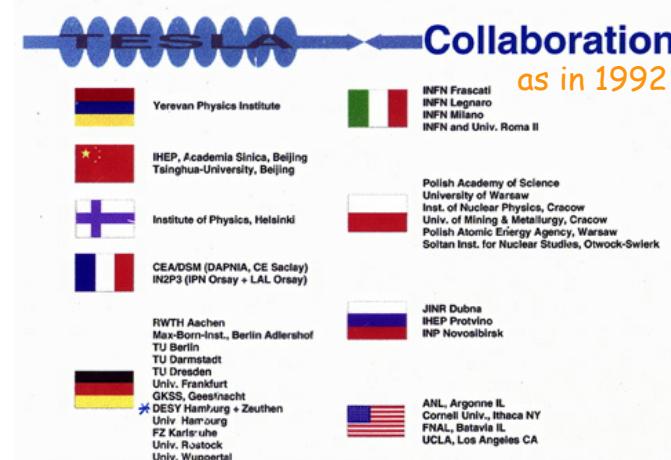

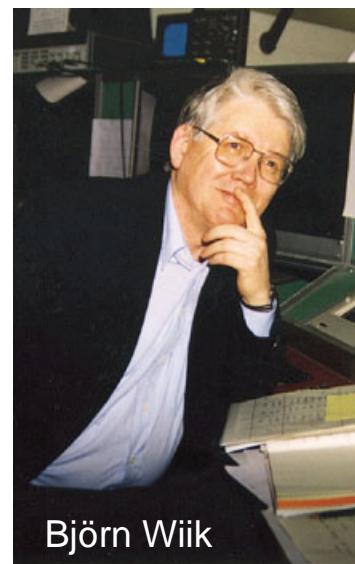

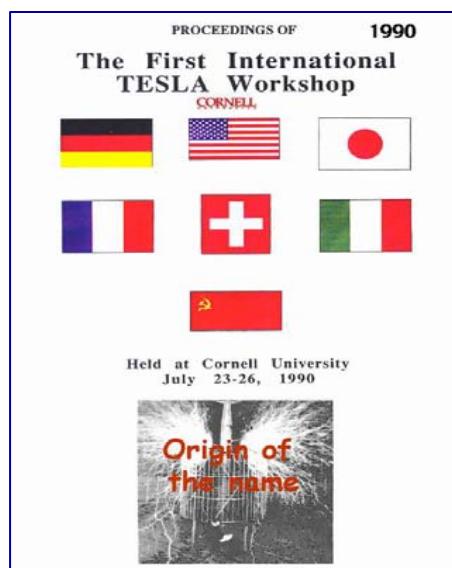

Develop SRF for the future TeV Linear Collider

Basic goals

- Increase gradient by a factor of **5** (Physical limit for Nb at ~ 50 MV/m)
- Reduce cost per MV by a factor **20** (New **cryomodule** concept and Industrialization)
- Make possible pulsed operation (Combine **SRF** and **mechanical engineering**)

Major advantages vs NC Technology

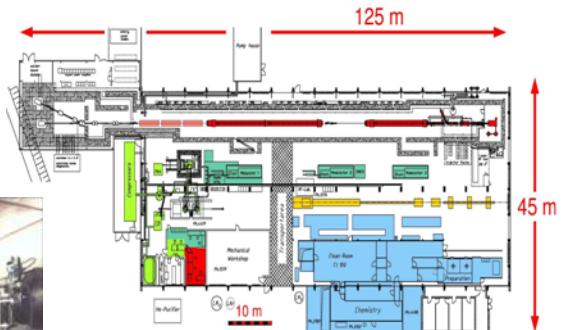

- Higher conversion efficiency: more beam power for less plug power consumption
- Lower RF frequency: relaxed tolerances and smaller emittance dilution

TESLA Collaboration Milestones

- February 1992 – 1° TESLA Collaboration Board Meeting @ DESY
- March 1993 - “A Proposal to Construct and Test Prototype Superconducting RF Structures for Linear Colliders”
- April 1995 – 25 MV/m in multi-cell cavity
- May 1996 – First beam at TTF
- March 2001 – First SASE-FEL Saturation at TTF
- March 2001 – TESLA Technical Design Report
- February 2003 – TESLA X-FEL proposed as an European Facility,
 - 50% funding from Germany
- March 2004 – TTF II/FLASH Commissioning start
- April 2004 - 35 MV/m with beam
- August 2004 – TESLA Technology chosen for ILC
- August 2005 – ILC-GDE Formed for design and costing
- June 2007 – European XFEL Project Starts

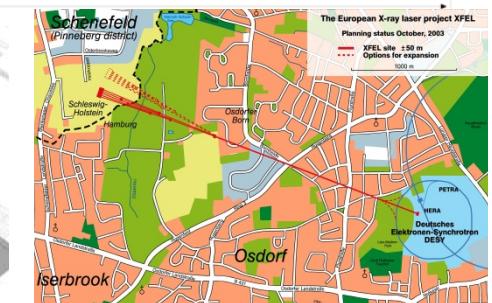

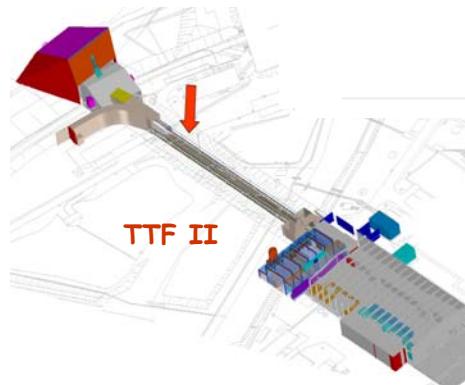

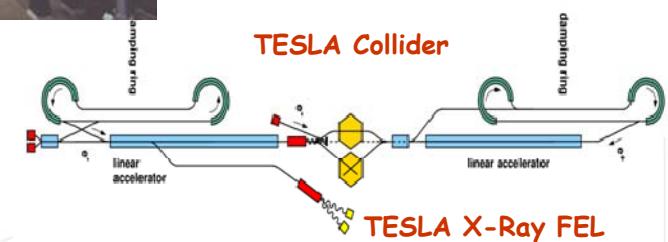

Infrastructure
@ DESY in Hall 3

TTF I

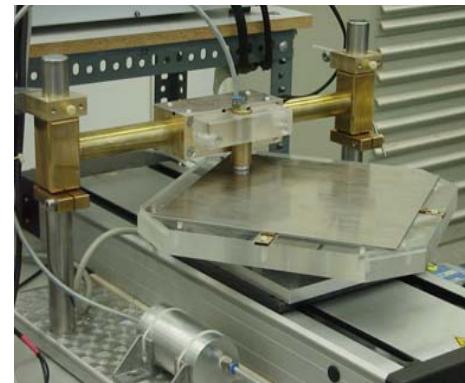

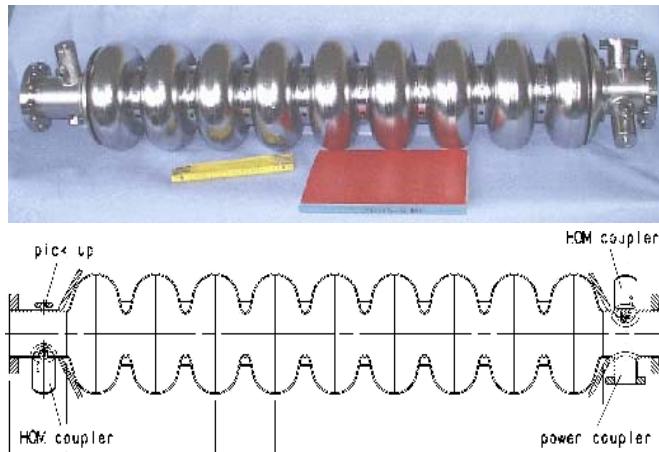

TESLA Collider

Major contributions from: CEA-Saclay, CERN, Cornell, DESY and INFN-LASA
(Alphabetic order)

■ Bulk Nb, 9-cell, 1.3 GHz

Eddy-current scanning system for niobium sheets

Cleanroom handling of niobium cavities

TESLA cavity parameters

R/Q	1036	Ω
$E_{\text{peak}}/E_{\text{acc}}$	2.0	
$B_{\text{peak}}/E_{\text{acc}}$	4.26	$\text{mT}/(\text{MV}/\text{m})$
$\Delta f/\Delta I$	315	kHz/mm
K_{Lorentz}	≈ -1	$\text{Hz}/(\text{MV}/\text{m})^2$

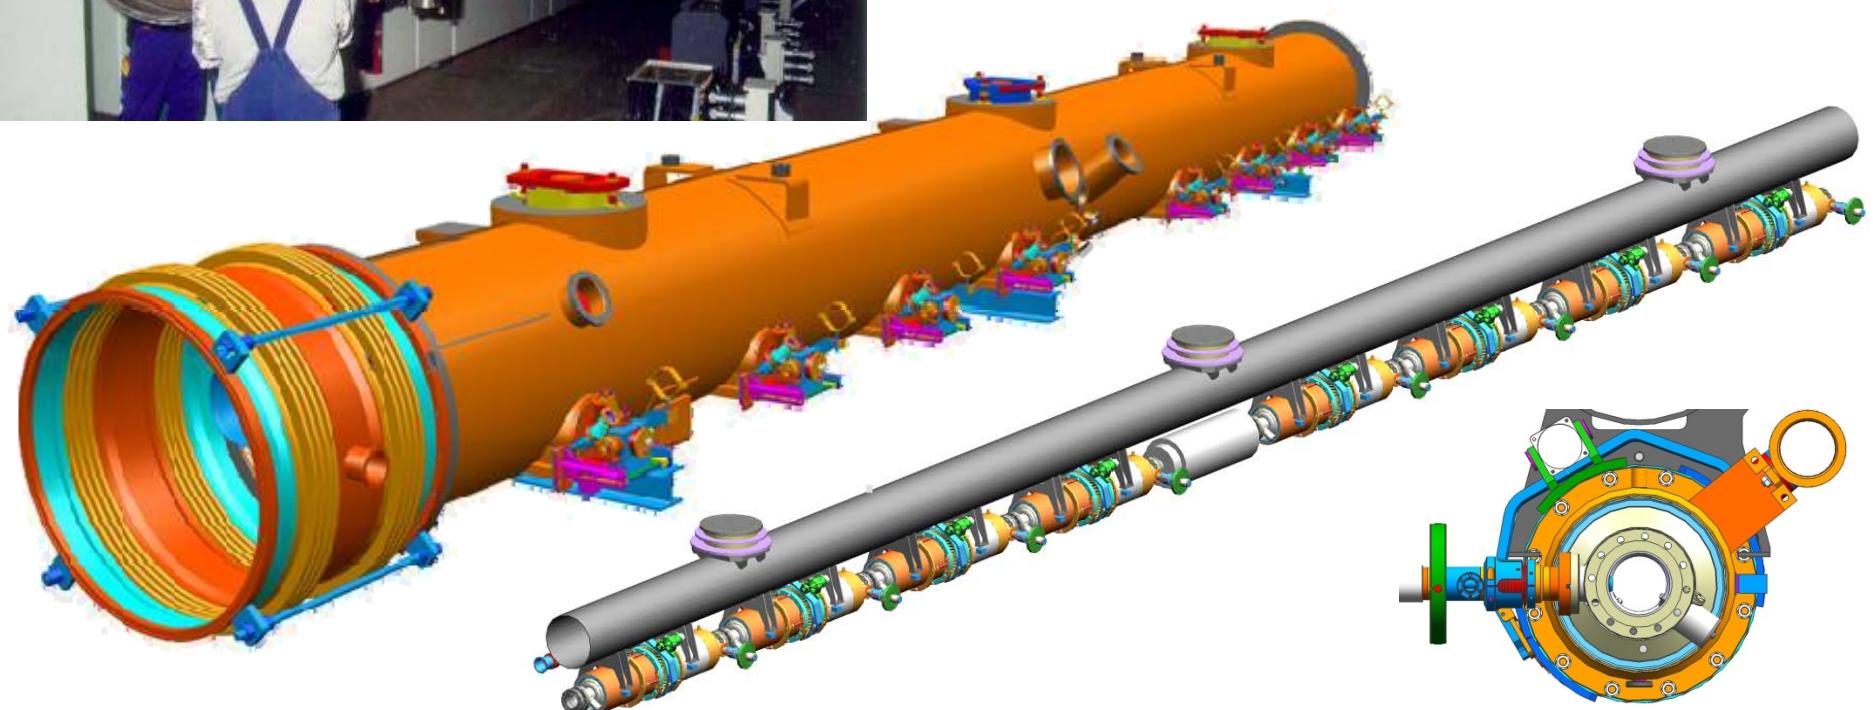

Preparation Sequence

- Niobium sheets (RRR=300) are scanned by **eddy-currents** to detect avoid foreign **material inclusions** like tantalum and iron
- Industrial production of full nine-cell cavities:
 - Deep-drawing of subunits (half-cells, etc.) from niobium sheets
 - Chemical preparation for welding, cleanroom preparation
 - Electron-beam welding according to detailed specification
- **800 °C** high temperature heat treatment to **stress anneal** the Nb and to **remove hydrogen** from the Nb
- **1400 °C** high temperature heat treatment with **titanium getter** layer to increase the **thermal conductivity** (RRR=500)
- Cleanroom handling:
 - **Chemical etching** to remove **damage layer** and titanium getter layer
 - **High pressure water rinsing** as final treatment to **avoid particle contamination**

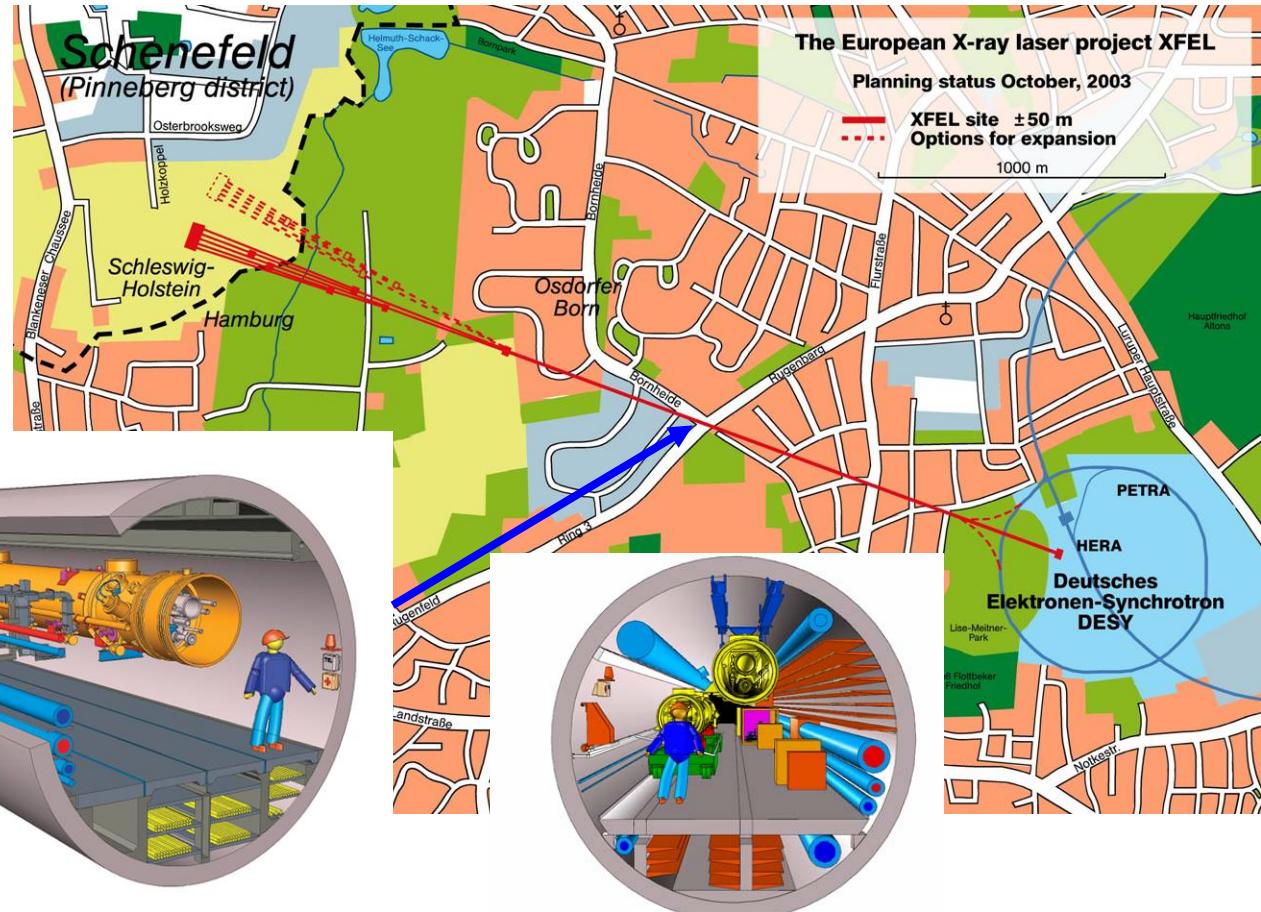

TESLA Technology: the INFN Cryomodule

- International collaborative Effort in the three regions for ILC
- Design changes are towards nailing down slot length of components
- Costing should be straight-forward from TTF and XFEL experience

Memorandum of Understanding

on the Preparatory Phase
of the European X-ray Free Electron Laser Facility

Preamble

A source of high-brilliance, coherent X-rays (below 1 nm) with a high repetition rate and pulse lengths in the femtosecond region will open up totally new research possibilities in solid state physics, geophysics, chemistry, materials science, medicine and structural microbiology. Free-Electron Lasers based on the principle of Self-Amplified Spontaneous Emission (SASE) and realized by using a linear accelerator as the driver provide such radiation.

For Italy
Ministry of Education, University and Research:

Dr. L. Criscuoli
Director General

Ministero dell'Università e della Ricerca

Direzione Generale per le Strategie e lo Sviluppo dell'Internazionalizzazione della
Ricerca Scientifica e Tecnologica

Prot. n. 99
Roma, 18 aprile 2007

Prof. Roberto Petronzio
Presidente
Istituto Nazionale di Fisica Nucleare (INFN)
Piazza dei Caprettari, 70
00186 Roma

Prof. Carlo Pagani

Subject: The European Research Infrastructure "European XFEL" (ESFRI Roadmap)

The Ministry of University and Research is aware of the preparation of a proposal for the preparation phase related to the EU-XFEL Research Infrastructure and sees it as a possible important tool for ensuring world class research in the field of Materials and Biomaterials in Europe. Italy has asked the following three institutions to participate to the preparatory phase of the EU-XFEL project:

- 1) INFN – Istituto Nazionale di Fisica Nucleare (Contacts: Prof. Roberto Petronzio, Prof. Carlo Pagani)
- 2) Sincrotrone Trieste (Contact: Prof. Carlo Rizzuto)
- 3) INFM-CNR – Istituto Nazionale per la Fisica della Materia (Contacts: Prof. Elisa Molinari, Prof. Giorgio Rossi).

The Italian participation will be coordinated by Prof. Carlo Pagani.

The above participations should be considered in the process taking place during the preparatory phase of EU-XFEL. Based on the results of the present negotiations within the existing the MOU and of this preparatory phase, and taking into account the priorities to be defined within the available budgetary frames, the active participation in the implementation phase will be taken into consideration by our Ministry and/or other funding Authorities in Italy.

Lettere dei Ministri F. Mussi e M. Gelmini

13

*Il Ministro dell'Università
e della Ricerca*

Rome, 16 MAG 2007
Prot. n. 9AB/7494

Dear Minister,

I refer to Your letter of April 18th 2007, notably to the XFEL project. You recalled in the margin of our meeting in Würzburg, very efficiently and generously organized by the German Presidency.

As you might remember, during our talks in Berlin last November, I agreed in principle that Italy will provide a contribution to XFEL.

I'm now in a position to officially reconfirm the Italian contribution through the Ministry of University and Research budget and INFN. In the present budgetary constraints we are striving to reach a total amount of 40 Million Euros. We are still looking into the details of such contribution, notably on the in kind component and related conditions, that will be negotiated between our representatives.

Italy is looking with great interest at the participation to the ESFRI process as a whole and to the Hamburg meeting early next June, also with a view to strengthening the overall scientific relations between our two Countries.

Looking forward to meeting You in Rome on May 21th, please accept, dear Colleague, my best regards.

Fabio Mussi

Dr. Annette Schavan
Federal Minister
of Education and Research
Berlin

*Il Ministro dell'Istruzione,
dell'Università e della Ricerca*

Rome 5-3-09

Prot. 4589

Onorevole Ministro, Stimata Collega,

vorrei anzitutto ringraziarLa per il Suo messaggio del 9 ottobre u.s. relativo alle grandi infrastrutture di ricerca XFEL e FAIR, e congratularmi con Lei per l'esito positivo delle complesse trattative per la fondazione del Laser ad Elettroni Liberi e raggi X Europeo (European XFEL), condotta a buon fine grazie al Sud costante ed illuminato sostegno.

Sono pertanto lieta di poter confermare nella sostanza, pur nella mutata e più difficile situazione finanziaria, l'impegno assunto nel maggio 2007, per il governo italiano, dal mio predecessore Fabio Mussi, per una partecipazione italiana ai costi di costruzione. Una cifra pari a 33 M€ (individuati al 2005) sarà versata sotto forma di contributo in natura ("in-kind" contribution), attraverso la partecipazione responsabile dell'Istituto Nazionale di Fisica Nucleare. L'Azionista (Shareholder) della Società European XFEL sarà il MIUR, nei modi già concordati tra i rispettivi responsabili scientifici. Ci sforzeremo di reperire, nei bilanci degli anni a venire, durante il periodo di costruzione, il contributo ulteriore in contanti di 7 M€, che porterebbe il totale alla cifra di 40 M€ menzionata dal mio predecessore, anche se al momento non sono in grado di impegnarmi su questo punto.

Sarò quindi particolarmente lieta di accettare, compatibilmente con gli impegni dei prossimi mesi, il Suo invito a partecipare alla sottoscrizione degli accordi a Berlino.

Per quanto riguarda il progetto FAIR, i cui tempi per la sottoscrizione degli accordi sono leggermente più lunghi, mi riservo di farLe conoscere quanto prima la posizione italiana rispetto a questo secondo progetto di grande interesse, relativamente a quale ci si attende un rapporto di reciprocità con altre infrastrutture collocate nel nostro Paese.

Voglia gradire Signor Ministro, i miei più cordiali saluti.

Maria Cristina Gelmini

All' On. Dr. Annette Schavan
Ministro Federale dell'Educazione e della Ricerca
Berlino

- ...sono pertanto lieta di poter confermare nella sostanza l'impegno assunto nel maggio 2007 dal mio predecessore Fabio Mussi ...
- ...Una cifra pari a 33 M€ (indicizzati al 2005) sarà versata sotto forma di contributo in natura ("in-kind" contribution) attraverso la partecipazione responsabile dell'Istituto Nazionale di Fisica Nucleare.
- L'Azionista (shareholder) della Società European XFEL sarà il MIUR, nei modi già concordati tra i rispettivi responsabili scientifici
- Ci sforzeremo di reperire, nei bilanci degli anni a venire, il contributo ulteriore di 7 M€, che porterebbe il totale alla cifra di 40 M€ menzionata dal mio predecessore.

- Settembre 2009: Cross-check Conference a Berlino per la verifica di tutti i documenti costitutivi dell'European XFEL, nelle 6 lingue ufficiali (Francese, Inglese, Italiano, Russo, Spagnolo e Tedesco), che hanno uguale valore legale.
- 23 settembre 2009: Sigla a Berlino dei documenti costitutivi dell'European XFEL, nelle sei lingue ufficiali,
- 28 settembre 2009: Costituzione ad Amburgo della società “European XFEL GmbH” con la sottoscrizione provvisoria di tutte le azioni da parte di DESY
- 30 novembre 2009: Firma ad Amburgo della Convenzione, per la definitiva formalizzazione della partecipazione dei vari Paesi, inclusa l'Italia, all' European XFEL

NEWS, 30 NOVEMBER 2009

European XFEL established under international law

With their signatures, representatives from ten nations today lay the foundations for the European XFEL under international law.

Ministers, state secretaries and other government representatives from ten partner countries met today in the Hamburg City Hall to sign the international European XFEL agreement.

- Il contributo alla fase di costruzione di XFEL sottoscritto dall'Italia ha le seguenti caratteristiche:
 - È in-kind, per un valore di 33 M€ (indicizzato 2005) secondo le cifre indicate a “budget book” e approvate insieme alla Convenzione.
 - Comprende attività di sviluppo, di trasferimento di know-how e di produzione con l'industria, di collaudo e certificazione.
- In sostanza, attraverso la partecipazione responsabile dell'INFN, l'Italia garantisce la fornitura di metà delle cavità superconduttrive, di una parte dei criomoduli e del sistema di terza armonica.

- L'INFN è riuscito a mantenere l'impegno verso il Progetto nonostante il forte ritardo dell'erogazione dei primi fondi e la loro allocazione alla Sincrotrone di Trieste (5 M€ a metà 2011, attraverso il FOE 2010)
- L'INFN ha comunque continuato a fornire l'insostituibile supporto qualificato dei suoi ricercatori del LASA, indipendentemente dall'erogazione dei fondi ad hoc.
- La Società XFEL ha creduto nel fatto che l'impegno economico italiano sarebbe stato rispettato e ha anticipato i fondi per le gare e le commesse all'industria Italiana (commesse iniziali per ca 30 M€)
- In armonia con il principio espresso dal MIUR nel 2007 per un contributo coordinato dei vari Enti di Ricerca al Progetto European XFEL, e in prospettiva di un ampliamento dell'interesse verso l'attività sperimentale con XFEL, si è proceduto alla firma di un accordo tra INFN e ST, relativo alla gestione dei primi fondi stanziati.

Contributo italiano attualizzato [M€]

LCH and ILC Module Comparison

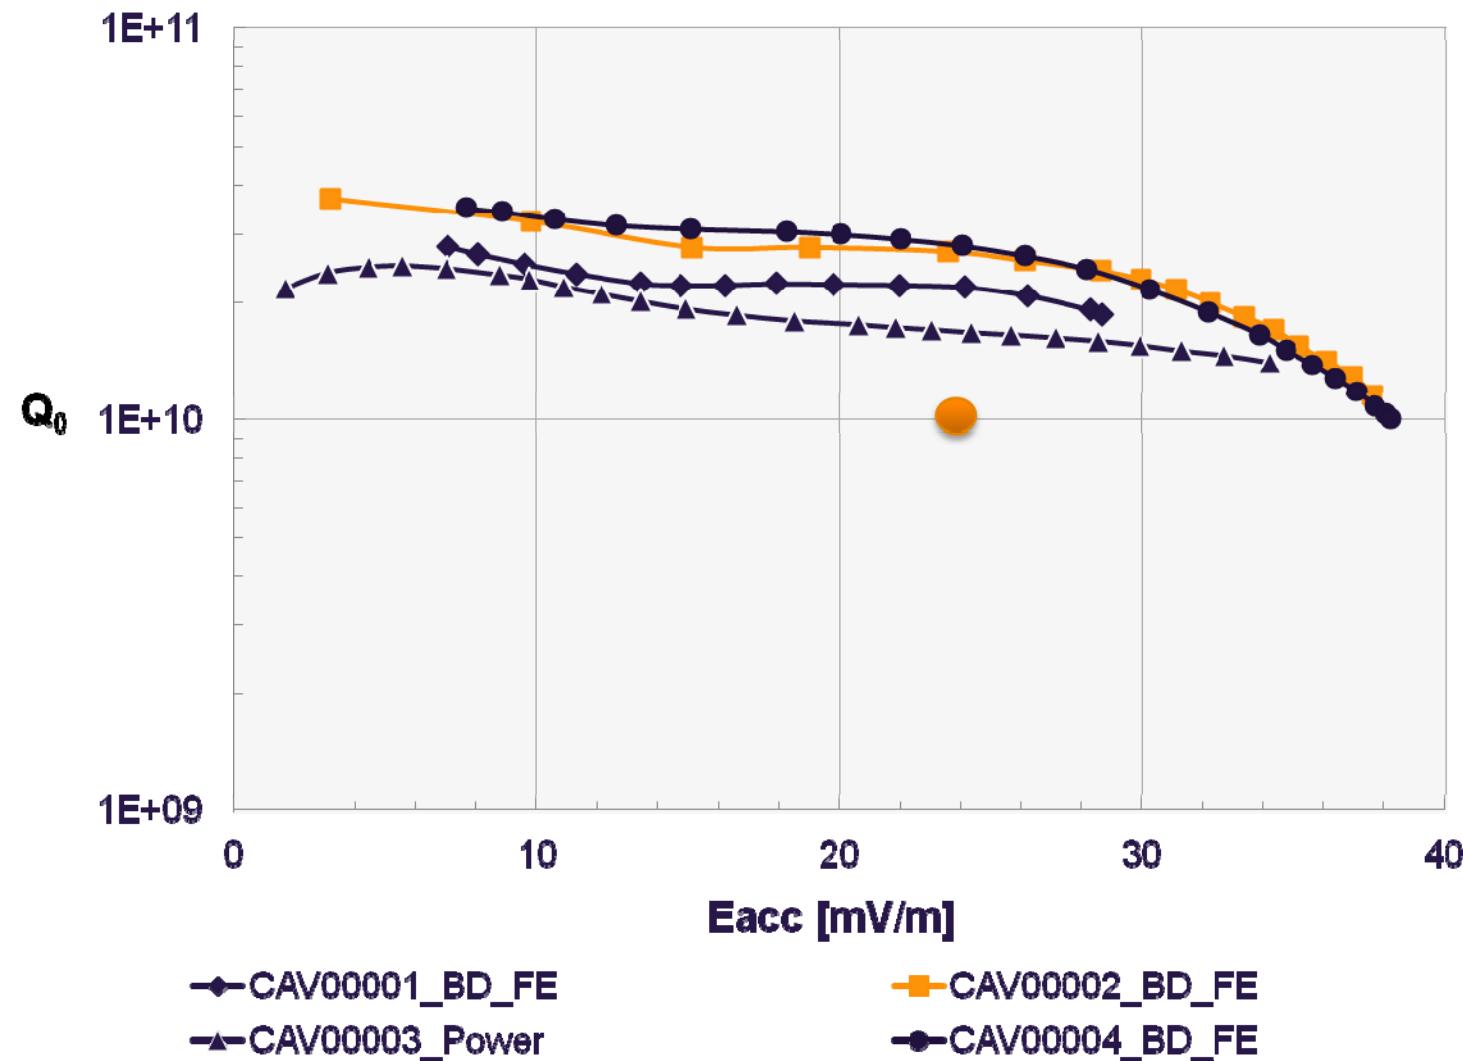

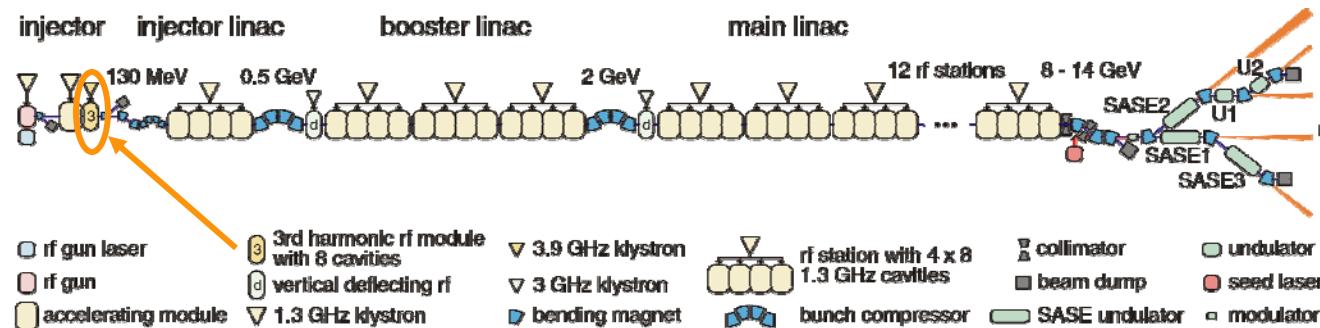

Status of EZ Reference Cavities: fabrication at EZ, treatment and RF test at DESY

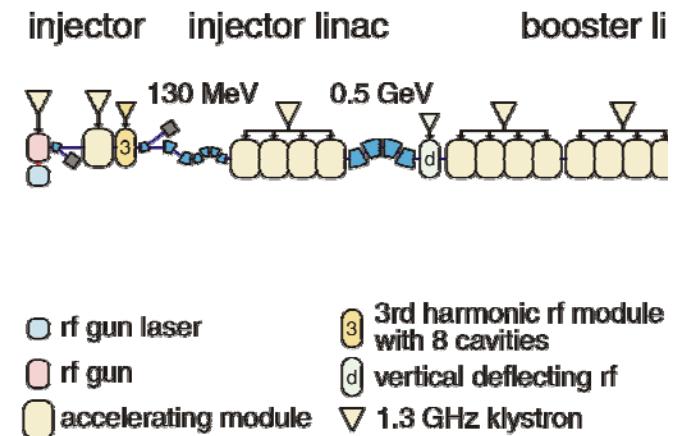

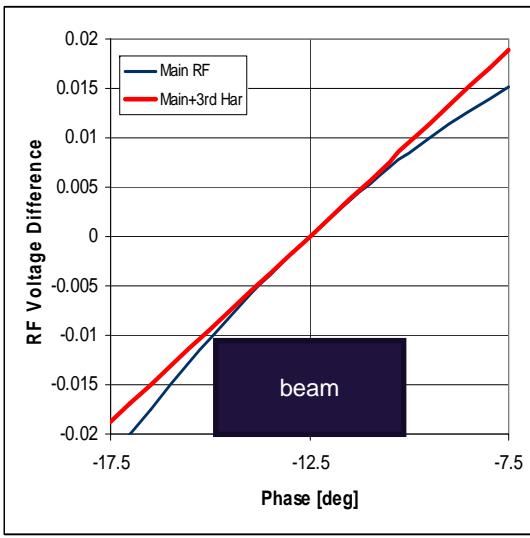

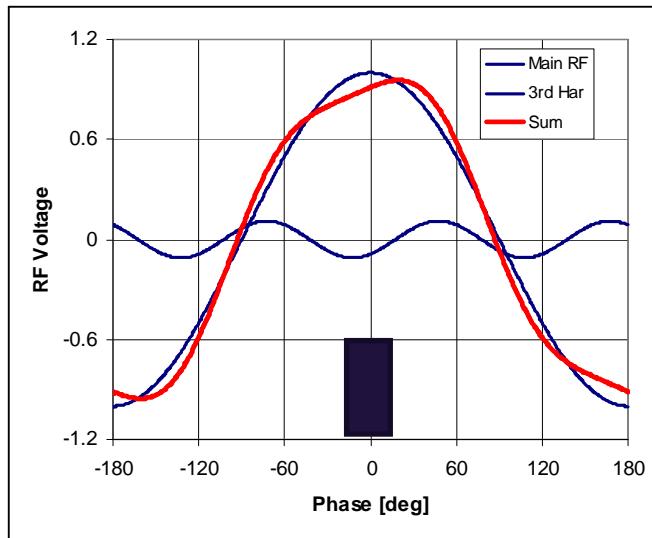

Status of 4 RI Reference Cavities: fabrication at RI, treatment and RF test at DESY

- 3.9 GHz RF system is right after injector module, before first bunch compressor
- Max 40 MV required in a 8 cavity module
 - Gradients are well within possible cavity/module performances (15 MV/m)
 - ➔ cavity active length 0.346 m
 - i.e. standard BCP treatment is sufficient for performance

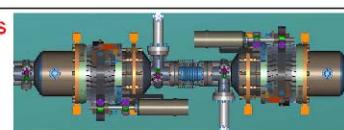

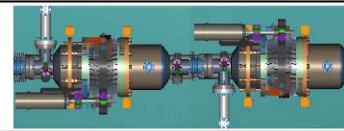

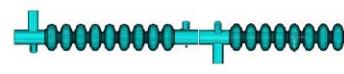

- To preserve beam quality before compression
 - Linearize RF curvature effects
- Design, realization, test of the main components is an In-Kind Italian contribution to XFEL
 - WP46

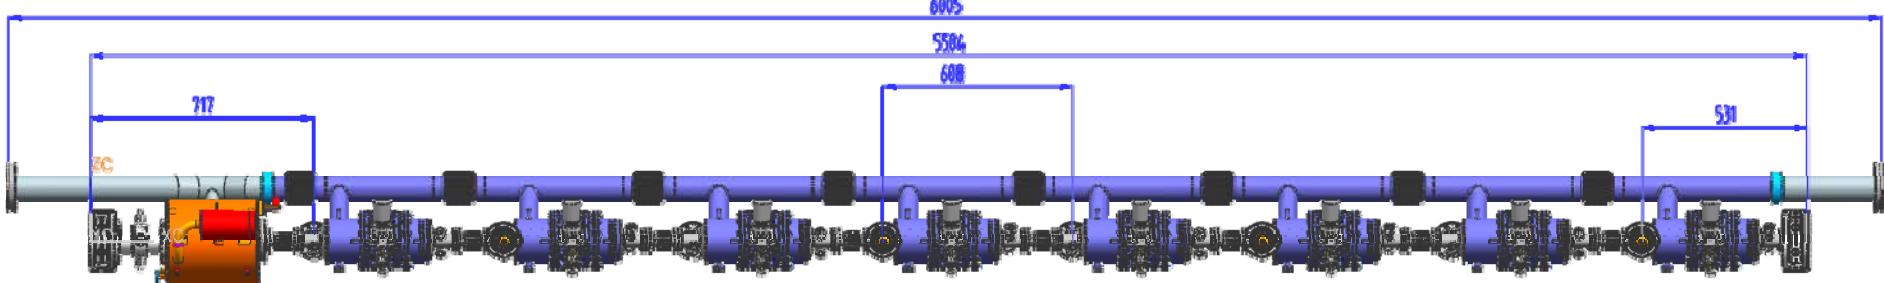

- Analysis of coupler kicks:
one string configuration
leads to compensation of
offset independent kicks
 - Every 2° cavity rotated
around longitudinal axis
 - Used in XFEL String
- Quad at module entrance
 - control both planes

M. Dohlus, DESY

summary – complex coupler kick:	
cav	a,b arbitrary: $d_n = d_0(a,b), \dots$ 
cav+mirror-z	SW: a=b (equal for sub-structures) $V_x^{(n)}(x,y) \approx d_0 + d_x x + d_y y$ $V_y^{(n)}(x,y) \approx f_0 + f_x x + f_y y$ 
cav+rot y-axis	SW: a=b, (equal for sub-structures) $V_x^{(\Sigma,n)}(x,y) \approx 2i \operatorname{Im}\{d_0 + d_x x + d_y y\}$ $V_y^{(\Sigma,n)}(x,y) \approx 2i \operatorname{Im}\{f_0 + f_x x + f_y y\}$ 
cav+mirror-y	a,b arbitrary (but equal for sub-str.) $V_x^{(\Sigma,n)}(x,y) \approx 2d_x x$ $V_y^{(\Sigma,n)}(x,y) \approx 2f_0 + 2f_y y$ 
cav+rot z-axis	a,b arbitrary (but equal for sub-str.) $V_x^{(\Sigma,n)}(x,y) \approx 2d_x x + 2d_y y$ $V_y^{(\Sigma,n)}(x,y) \approx 2f_x x + 2f_y y$ 

from <http://www.desy.de/~dohlus/2007/2007.07.ckick/ckick2.pdf>

- Split between INFN-DESY (48%-52%) in-kind contributions
- **Very rough** splitting of work:
 - INFN
 - ➔ Design/procure: **cavities, tuners, cryomodule**
 - ➔ **Vertical testing** of all cavities, @ LASA
 - ➔ Join assembly/test @ DESY (up to commissioning)
 - DESY
 - ➔ Procurement of **quad/couplers/power RF** and controls
 - and “**standard**” 1.3 GHz components...
 - ➔ **Power RF testing** (horizontal/module test) @ DESY
 - ➔ Most **infrastructural work** for module assembly/testing and installation (besides VT)

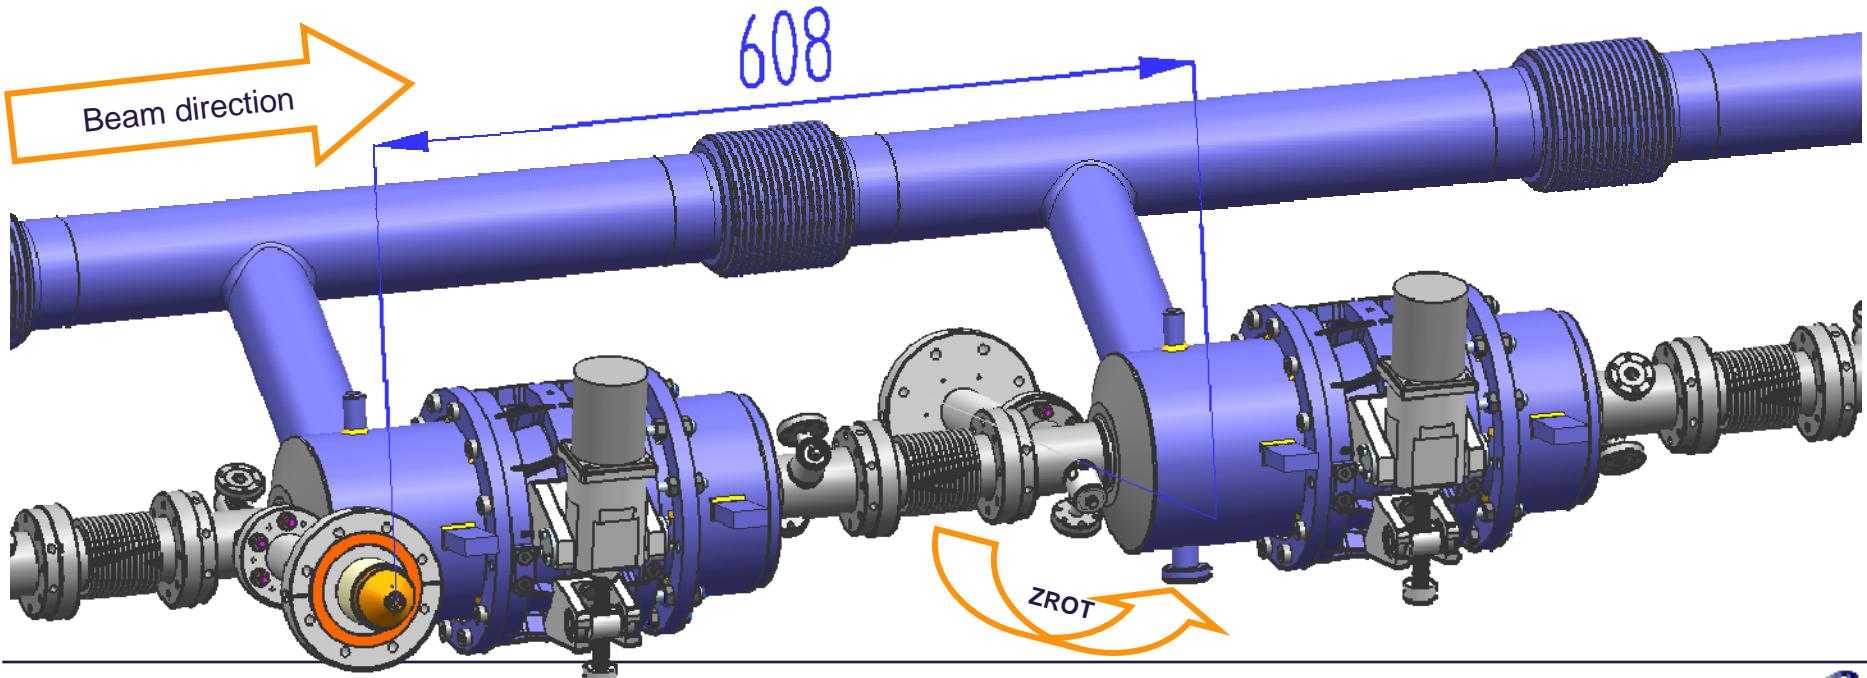

- Qualification and characterization of component **prototypes**
 - Cavity design and supervision of DESY procurement
 - Qualification of the 3 «naked» prototypes in VT
 - ➔ All tested > once: 1 @ specs/1 to retest (setup wrong)/1 lowish Q
 - ➔ Used for setup of the preparation and testing infrastructure
 - Design and completion of the 3 prototype dressed cavities for horizontal testing
 - ➔ Tank design/fabrication/tendering and integration to cavities
 - ➔ Tuner design (Evolution of the «slim» ILC type)
 - ➔ Participation to horizontal tests at DESY

APPROVATO DA XFEL IN-KIND REVIEW COMMITTEE MAGGIO 2012

- Design, tendering, procurement of **main components** for 3H
 - String of dressed cavity
 - ➔ VT at INFN for qualification (20 MV/m @ $3 \cdot 10^9$)
 - ➔ Complete with tank integration and cold tuning mechanism
 - ➔ Participation to horizontal testing at DESY
 - ➔ Participation to string assembly
 - 3H cryomodule
 - ➔ vessel
 - ➔ cold mass
 - ➔ intercavity bellows
 - ➔ magnetic shields
- Participation to installation and commissioning of 3H System

- Due to alternating couplers requirement and to the position of the 2-phase pipe there are two dressed cavity configurations (left and right)
- Blade tuner updated to the “slim” type, concept derived from ILC tuner work by INFN. Lighter, cheaper, motor to the side.

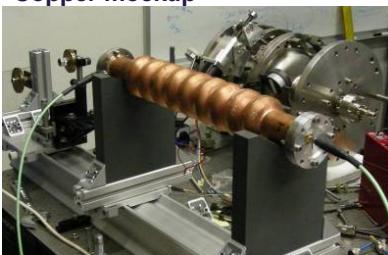

Setting of fabrication/treatment procedures

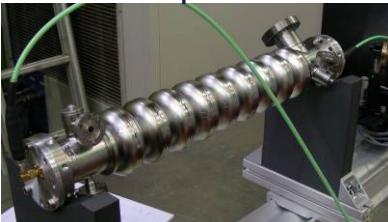

RF "parts"

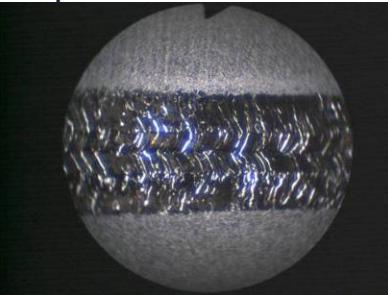

Copper mockup

Flatness	96.0%	97.7%	95.4%	37.4%	35.0%	73.6%

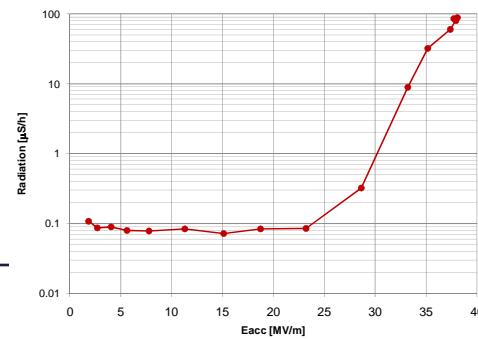

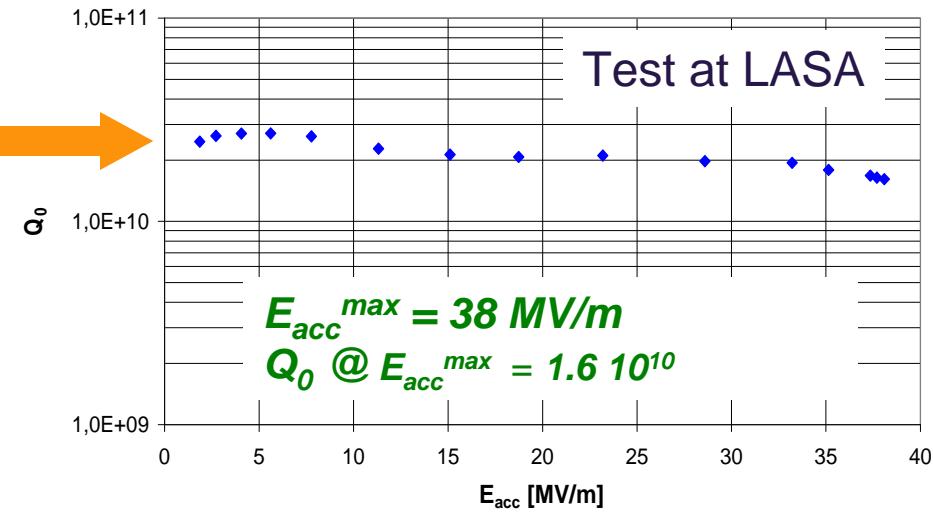

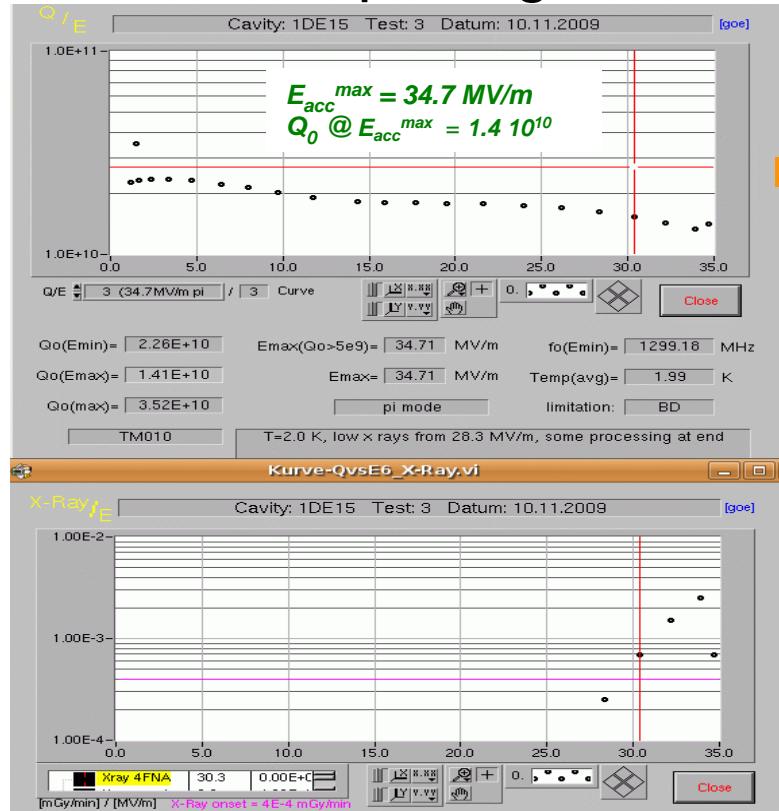

- Test of all 3.9 GHz cavities at INFN
- Existing 500-700 MHz Vertical Test Facility
 - Undergone cryogenic refurbishment
 - ➔ 18 W @ 2 K / 10 W @ 1.8 K
 - ➔ less than 1 W in static conditions
 - Adapted VT insert to 1.3 GHz single cells and 3.9 GHz cavities
 - New RF hardware
 - ➔ 100 W at 1.3 GHz
 - ➔ 200 W at 3.9 GHz
- Clean room (9m²), UPW plant and HPR under qualification for operation

Qualification of test stand

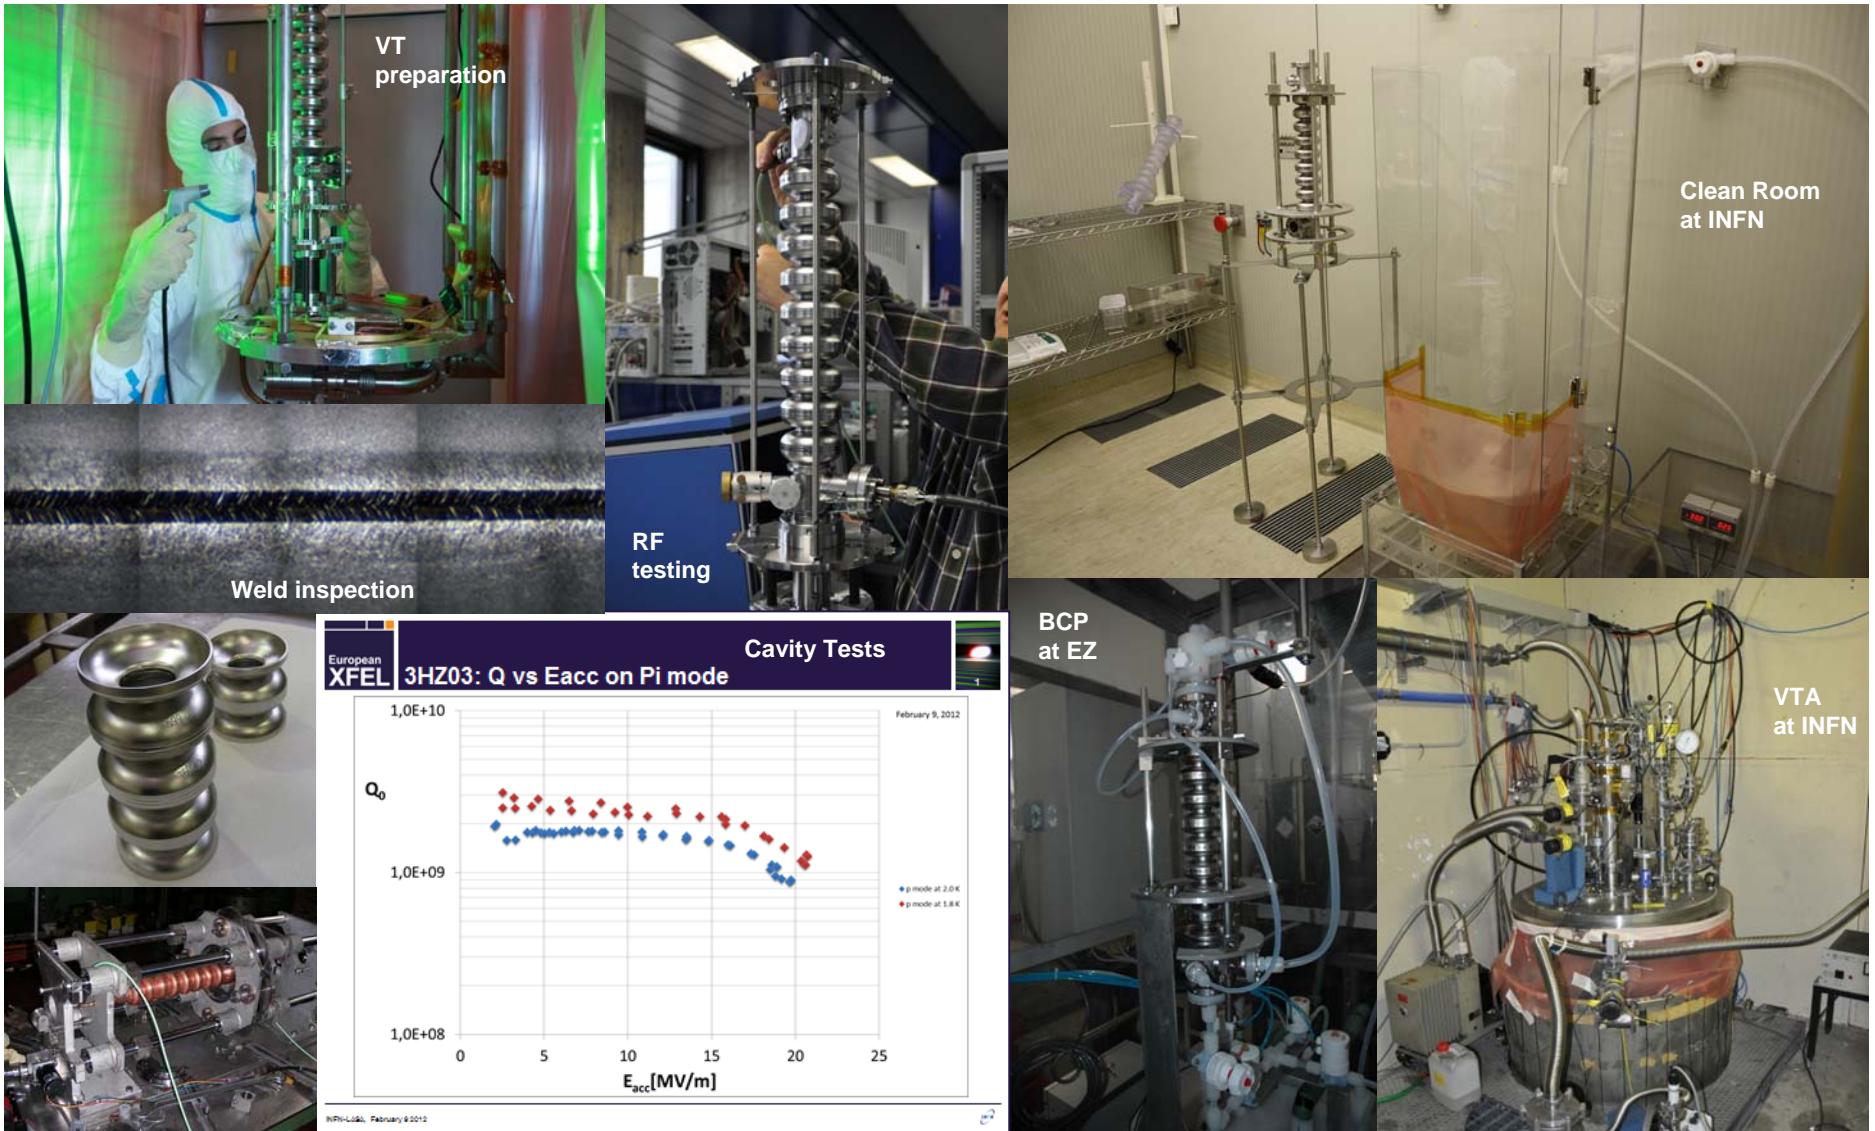

- Calibrated at LASA with 1.3 GHz prepared by DESY
 - “as-received”, without opening it, for the VT debuggin
 - after opening and rinsing with HPR

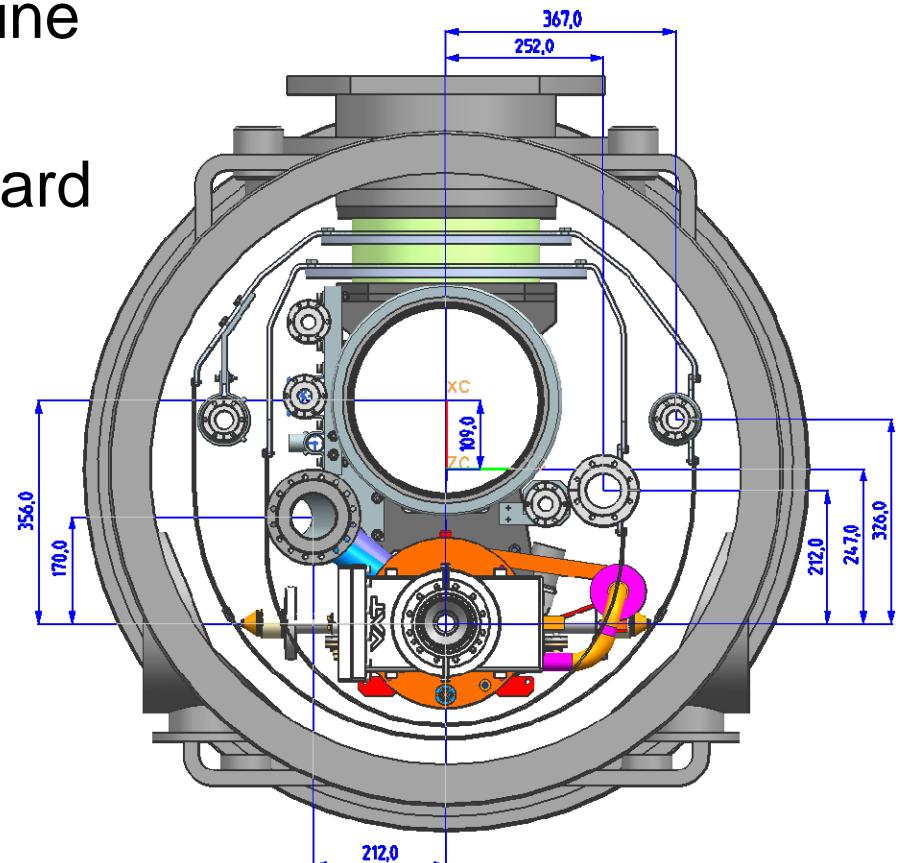

✓ **Completed**

- ✓ **Cryo OK**
- ✓ **RF OK**
- ✓ **DAQ OK**
- ✓ **HPR OK**

INFN: Work on prototypes and VT preparation

- Design is “**Plug compatible**” with Type III+/XFEL modules
 - Identical transverse X-section for all cryo piping
- Module part of the same cryo line with the injector module
 - Adapts at interfaces of standard cryo components
- Shorter module/string lengths
- All cryo piping in the same relative position with respect to beam axis
- **3D models >90% complete**
 - drawing packages for CFT

Longitudinal interfaces preserved as in ML

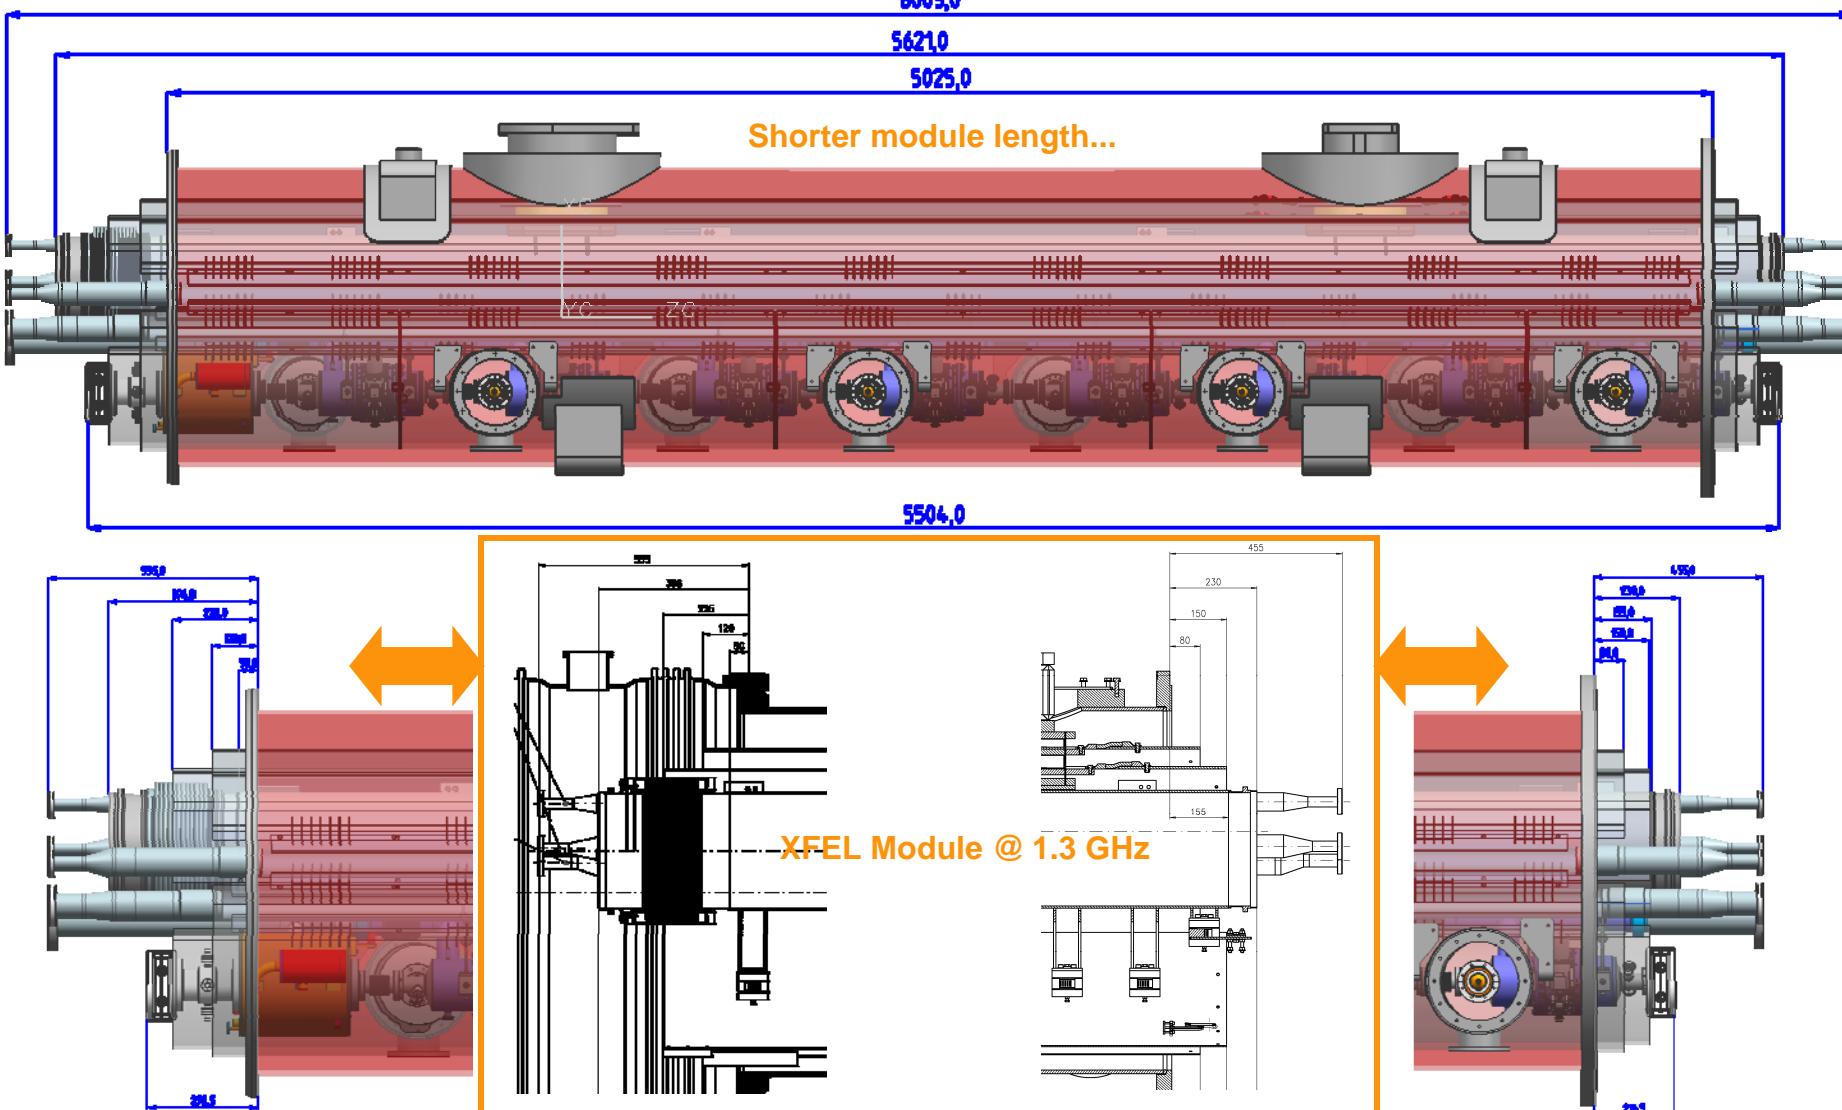

6005,0

5621,0

5025,0

Shorter module length...

5504,0

- DESY Hall III clean room and assembly area will be used for the 3.9 GHz string and module assembly
 - adaptations for cavity, string and cold mass handling are required
