Construction and measurements of a vacuum-swing-adsorption radon mitigation system

Thursday, 11 April 2013 10:30 (20)

In order to reduce backgrounds from radon-daughter plate-out onto the wires of the BetaCage during its assembly, an ultra-low-radon cleanroom is being commissioned at Syracuse University. Air sampling measurements taken before connecting the vacuum-swing-adsorption radon mitigation system demonstrate the effectiveness of air circulation through standard HEPA filters at reducing the concentration of radon daughters in the cleanroom. I will describe details of implementation of the radon mitigation system and measurements of the concentration of radon and radon daughters.

Summary

Primary author(s) : Prof. SCHNEE, Richard (Syracuse University)

Co-author(s) : Mr JARDIN, Dan (Syracuse University); Mr GHULAM, Gogee (Syracuse University); Dr BUNKER, Raymond (Syracuse University)

Presenter(s) : Prof. SCHNEE, Richard (Syracuse University)

Session Classification : Session 5: Purification/control techniques from radioactive noble gases

Track Classification : Purification/control techniques from radioactive noble gases
