

Space mission Gamma-400

GAMMA-400 Collaboration

- Lebedev Physical Institute (leading organization)

- National Research Nuclear University MEPhI

- Ioffe Physical Technical Institute

- Open Joint Stock Company "Research Institute for Electromechanics" (Istra)

- Institute for High Energy Physics (Protvino)

- Space Research Institute

- Istituto Nazionale di Fisica Nucleare, INFN, Italy

Gamma-400: the Italian collaboration in 2013

INFN Trieste

INFN and University of Florence

INFN Pavia

INFN and University of Roma Tor Vergata

INFN Pisa and University of Siena

Gamma-400

Approved by ROSCOSMOS

Originally devoted to study of: γ rays (30 GeV-1 TeV)
& high-energy electrons and positrons.

Availability for a revision of the project that does not
alter the original objectives

· The characteristics of the satellite:

- scientific payload 2600 kg,
- power budget 2 kW,
- expected lifetime > 5 years

provide excellent opportunities to configure the apparatus for
extremely important physics tasks, beyond the current generation of space missions.

The Italian contribution to the project would concentrate on:

Study of p and He spectra close to the “knee” region (10¹⁴ – 10¹⁵ eV)
Extension of the gamma capability in the 30–300 MeV region

Gamma-400: a unique instrument

Combine for the first time photon and particle (electrons and nuclei) detection in a unique way

**Excellent Silicon Tracker (30 MeV – 1 TeV),
breakthrough angular resolution 4-5 times better than
Fermi-LAT at 1 GeV**

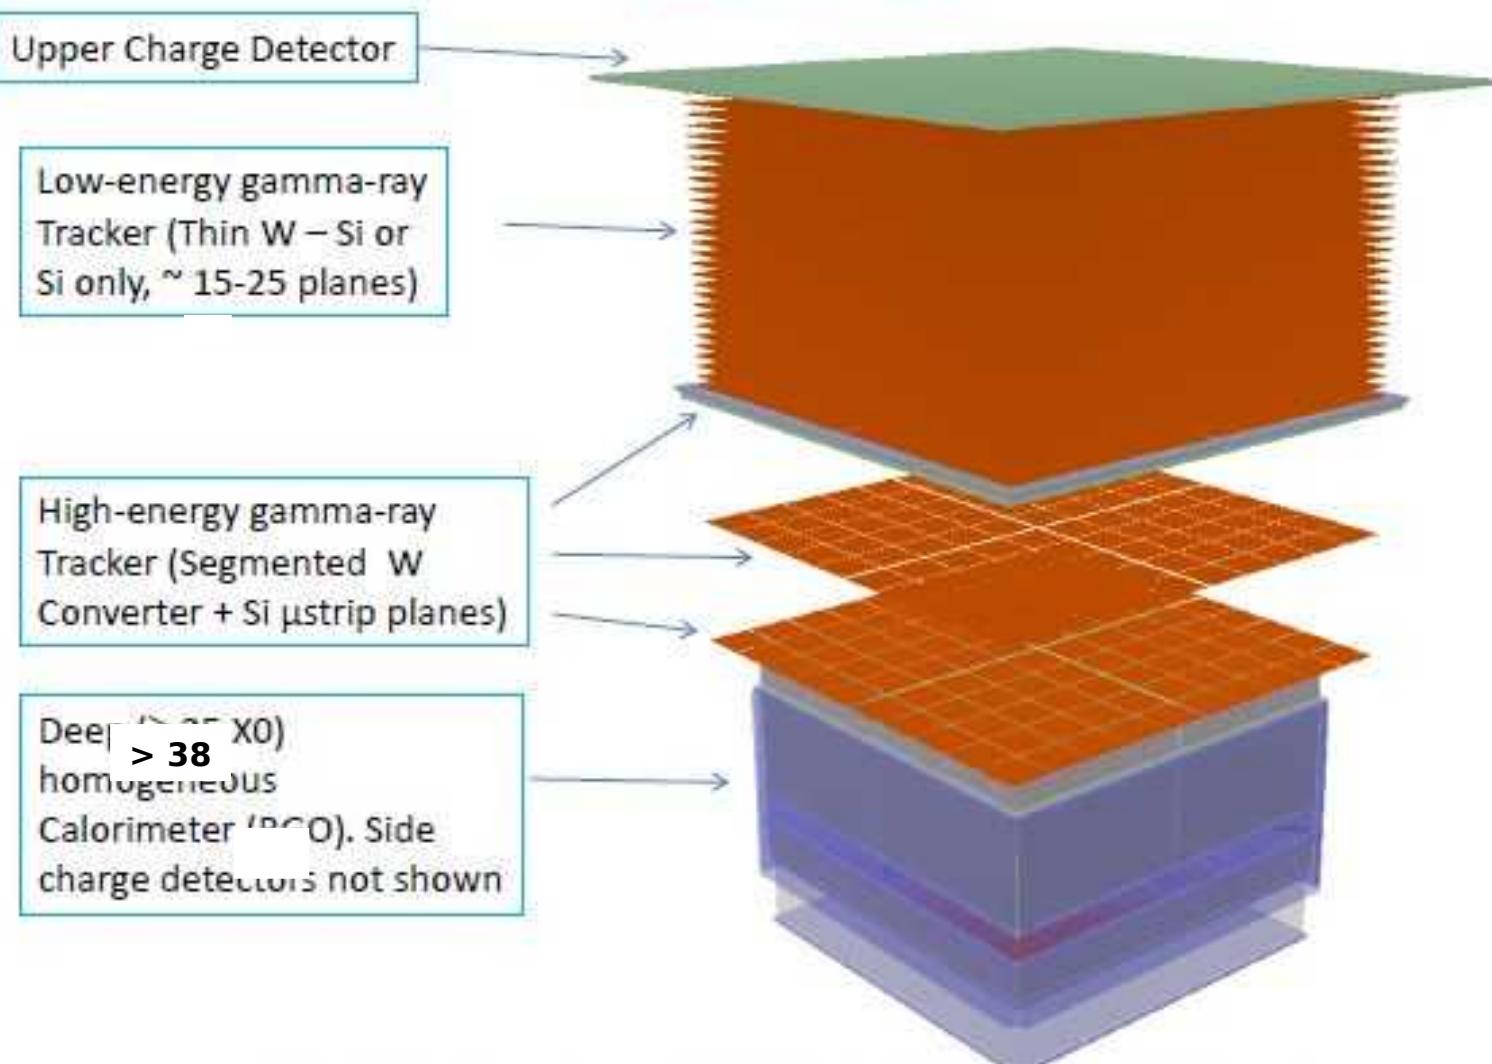

improved sensitivity compared with Fermi-LAT by a factor of 5-10 in the range 30 MeV–10 GeV

Heavy Calorimeter (40 X0), homogeneous and isotropic, with optimal energy resolution and particle discrimination

Electron/positron detection up to TeV energies

Nuclei detection up to 10^{15} eV energies

Gamma-400

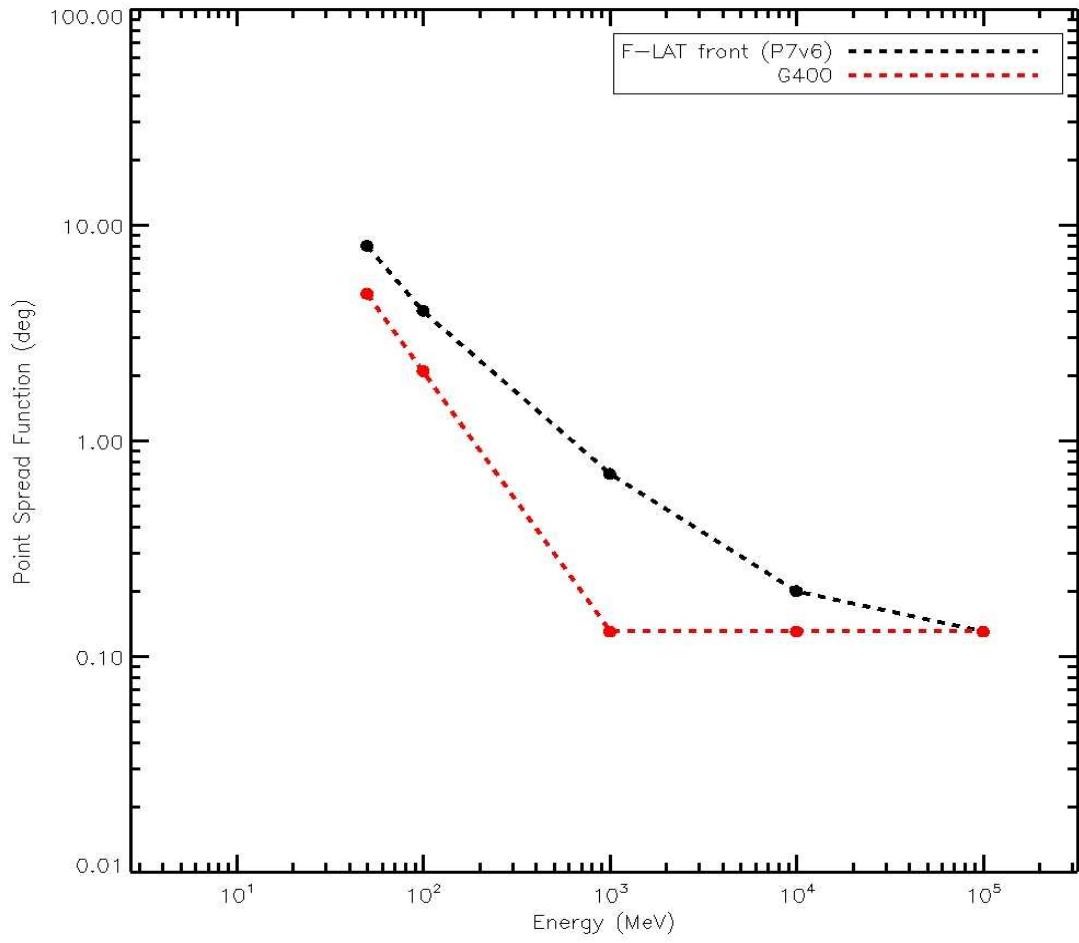

apparatus versions used in one of the preliminary simulations.

Tracker

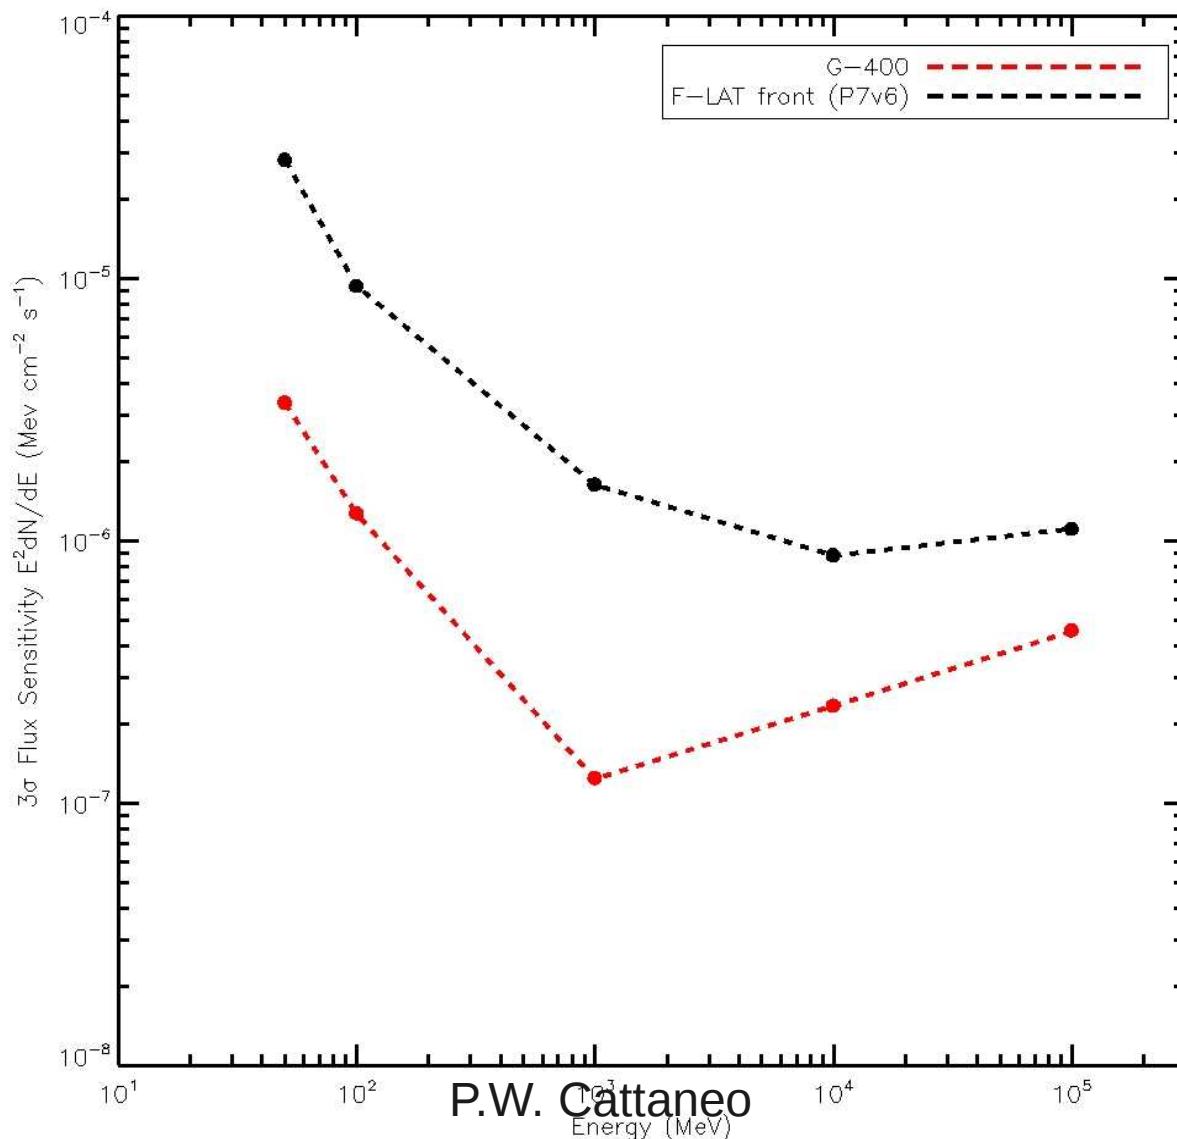

- **Simulation work on the tracker has been tuned:**
 - **Geometry implemented in the software framework;**
 - **Hit digitization (hit to the strip association) implemented;**
 - **Clusterization of the tracker hits implemented;**
 - **Energies of 10, 30, 50, 100 and 400 MeV; 1 and 10 GeV simulated;**
 - **Investigation with lower tungsten thickness (0%, 1.5%, 2%) being finalized**

Gamma-400 set-up: 25 planes, 0.03 X0 W, 2.8 cm spacing, Si pitch 120 micron, analog (alternate) readout, Kalman reconstruction, assumed bkg rejection eff. 10-4.

**Gamma-400 vs. Fermi PSF
(68% containment radius)
(Fermi: 0°; G-400:30°)**

Gamma-400 vs. Fermi 3σ flux sensitivity (2-week observing time)
Fermi-LAT in sky scanning mode,
G-400 in pointing mode with no Earth occultation

Calorimeter

Scintillating material	CsI(Tl)
N ₂ N ₂ N	20 \times 20 \times 20
L (cm)	3.6*
Crystal volume (cm ³)	46.7
Gap (cm)	0.3
Mass (Kg)	1683
N.Crystals	8000
Size (cm ³)	78.0 \times 78.0 \times 78.0
Depth (R.L.) " (I.L.)	39 \times 39 \times 39 1.8 \times 1.8 \times 1.8
Planar GF (m ² sr) (fiducial)**	1.72 \times 1.72 \times 1.7 2

(* one Moliere radius)

(** within a reduced perimeter of size (N-1)*L)

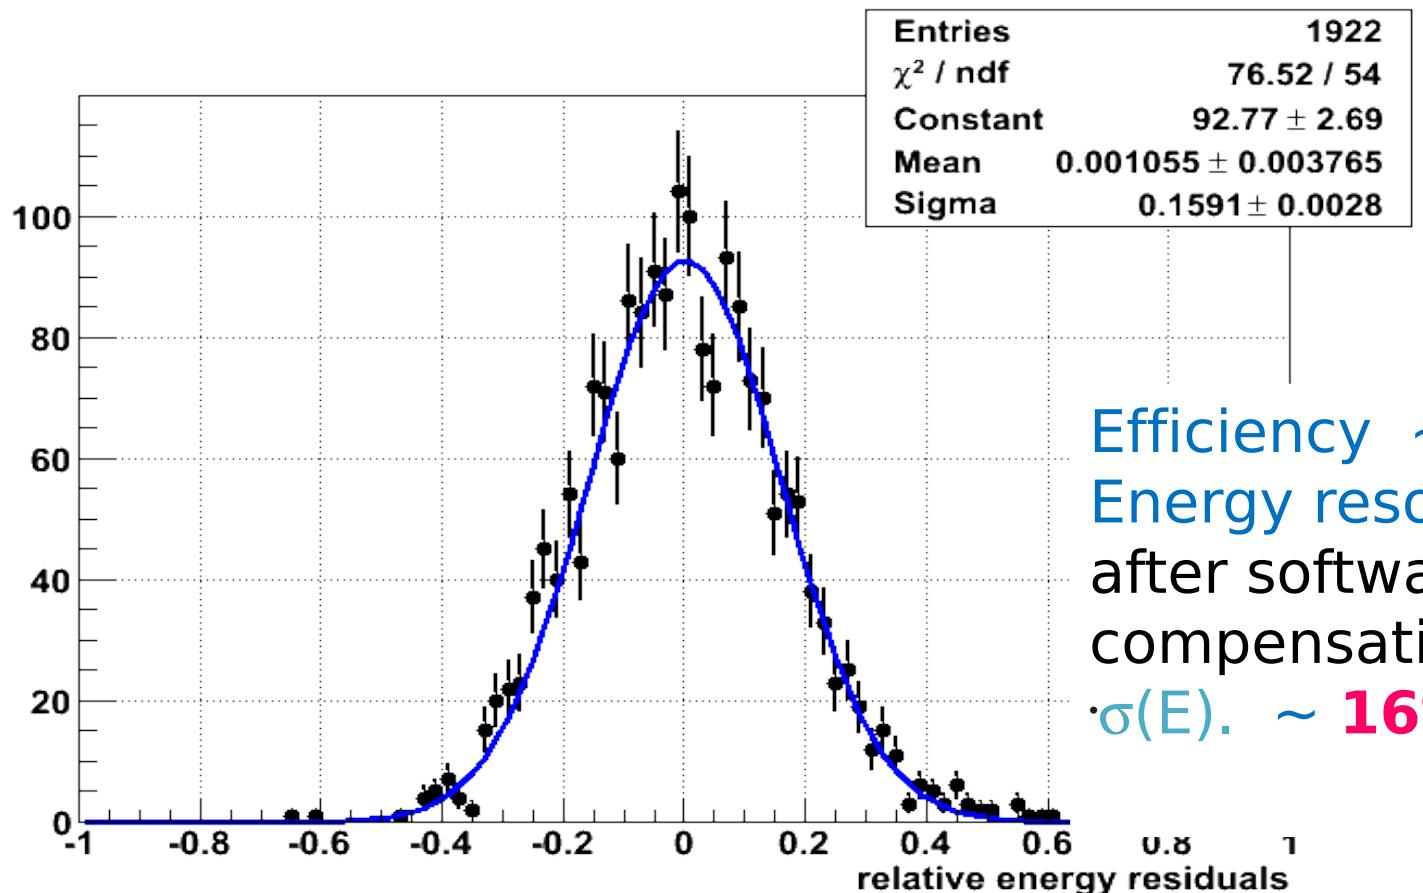

- Scientific requirements:
 - **Homogeneous and isotropic** design
 - **Highly segmented in 3 dimensions**
- Several configurations have been simulated, both with BGO and CsI(Tl) crystals.

Selected configuration:
Cubic crystals of CsI(Tl)

à

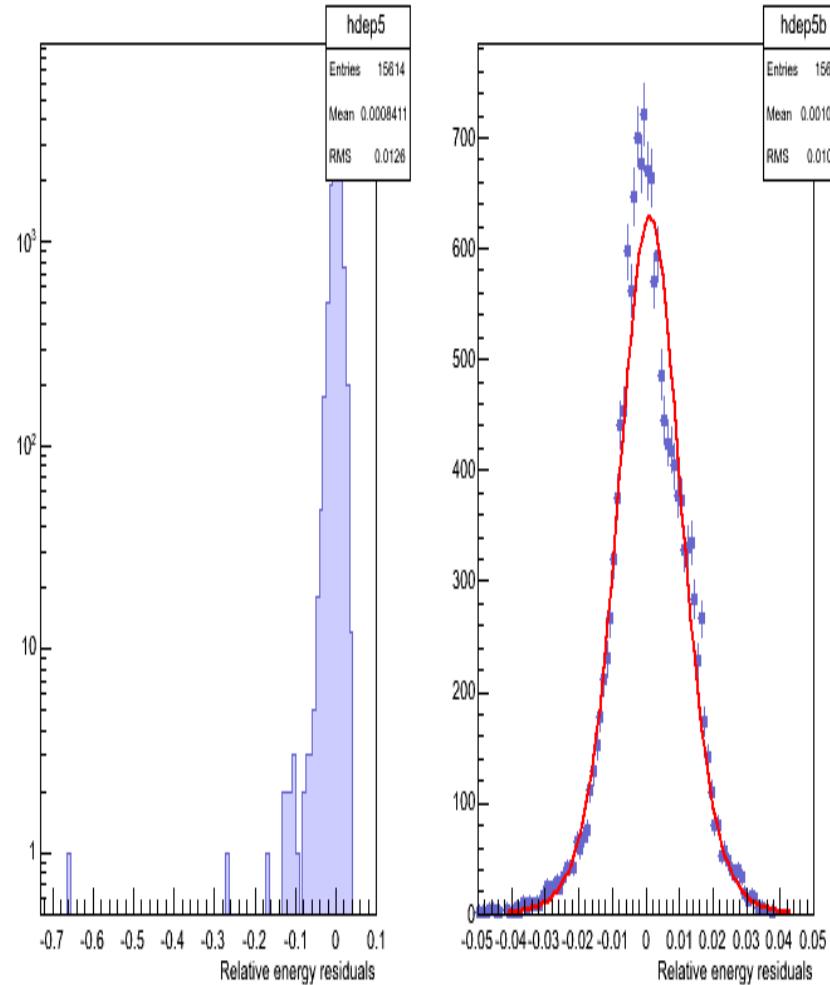

Calorimeter resolution: Protons (1 TeV)

Calorimeter resolution: Photons (100 GeV)

Gamma rays
traversing the top
detectors (AC) and
the top
calorimeter
surface,
with contained
shower maximum

Energy resolution:
• RMS ~ **1.26%**
• $\sigma(E)$ ~ **0.87%**

Gamma-400: next steps

Presentation at the July 23rd CSN2 meeting on the progresses on the design of the modified apparatus and on the scientific capabilities;

Preparation of a paper on the proposed instrument (in progress);

Preparation of a first draft of the Gamma-400 Technical Design Report (in progress).

Gamma-400-RD

Responsabile Nazionale: A. Vacchi

Responsabile locale: P.W. Cattaneoi

Sezioni partecipanti: FI, PI, PV, RM2, TS

Partecipanti e FTE:

Paolo W. Cattaneo (I Ric) 40

Andrea Rappoldi (I Tec) 40

Heads: 2, FTE: 0.8

Richieste

MI 2 k€ (riunioni di collaborazione)

ME 6 k€ (riunioni e contatti con i russi,
test su fascio dei prototipi)

Cons. 5 k€ (metabolismo,
materiale per realizzazione prototip)

Inv. 5 k€ (macchine calcolo per MC)

Tot. 18 k€

Servizi: ??.
