SQLAlchemy + SBK continued

Miłosz Zdybał

Status

- Little changes over last time
- Naming conventions:
  - Conflicting names for foreign key columns and SQLAlchemy relationships
  - *_obj* suffix to column name for object relation
    - *site => site_obj*, etc. (obejct will have both fields, FK val)
  - Names of FKs columns are mostly consistent with referenced table names
    - Except for *soft_release / fullsim_soft_ref – soft_release seems* to OK

Plans

- Close future (before meeting in Pisa)
  - Integration with DIRAC
    - How SBK will be handled from DIRAC?
      - Service that will export SBK related functions?
    - Service that will access SBK and query for some data
  - Working sample DIRAC Service ready

- Further
  - Defining functions needed in DIRAC Service
  - Implementing...
