## VERITAS Recent Results

*Thursday, 23 May 2013 14:45 (20 minutes)*

VERITAS is an array of four imaging atmospheric Cherenkov telescopes near Tucson, Arizona and is one of the world's most sensitive detectors of very high energy (VHE:  $>100$  GeV) gamma rays and cosmic rays. The scientific reach of VERITAS covers the study of both Extragalactic and Galactic objects and the search for astrophysical Dark Matter. In this talk I will discuss the status of VERITAS operations and detector upgrades and present a selection of recent results.
