

DIRAC testbed

SuperBDIRAC development

Bruno Santeramo

15/11/2012

SuperBDIRAC module installation status

- bbrbuild01.cr.cnaf.infn.it
 - Production
- sb-serv04.cr.cnaf.infn.it
 - Development
- gridtest-05.ba.infn.it
 - Installation procedure test

SuperB DIRAC shared development

- /opt/dirac/pro
 - SuperB DIRAC.main
 - SuperB DIRAC.bruno
 - SuperB DIRAC.mylosz
 - SuperB DIRAC.marcin
 - SuperB DIRAC.rafal
- Symbolic link
 - SuperB DIRAC → SuperB DIRAC.main (for example)
- Working directly on sb-serv04
- Update SVN directly from sb-serv04

SVN usage

- Now, only sb-serv04 should be used for development purposes
 - If needed, also bbrbuild01 can be used for same task
 - especially when new DIRAC head node will be available
- `svn co https://sbrepo.pd.infn.it:8910/WebUi/trunk/DIRAC`
- `svn commit -m "Update from git release"`
- `svn push`
- SVN now available on sb-serv04 (thanks to Armando)

Some trouble...

- Git allows reading repo without authentication
- Experiment's SVN need authentication
- But DIRAC need to read a repo to prepare new project release...
- I have to automatize Git $\leftrightarrow$ SVN interaction
 - Until solved trouble with SVN reading permission
- Please, upload your code on SVN and send me an email, I will sync SVN copy with GitHub copy to prepare the new project release
 - I hope this will be a temporary solution...

ProductionSystem

- Where to place Mylosz's code?
 - Some services will be deployed
 - May we need some agents, DBs, scripts...
- DIRAC collect components in Systems
 - Every system accomplish to a specific task
- We need a fully MonteCarlo production “system”
 - Can we collect our code under existing systems ?
 - We want to define a “ProductionSystem” under SuperB DIRAC to collect our code ?

Task assignement proposal

- Bruno
 - Solve repo troubles
 - Complete Severus porting under DIRAC
- Mylosz
 - Prepare a working service
 - To return Site's list
- Marcin, Rafal
 - Webpage to diplay site's list (taking data from Mylosz's service)
 - Permission management:
 - The same page (site's list) but adding an “edit” button foreach site
 - Page should be availble only for sb_productionmanager members

Next meeting reminder

- SuperBDIRAC meeting
 - 22 November 2012 on Skype
- SuperB Collaboration Meeting @ Frascati
 - 10-14 December 2012

Discussion time

- Proposal ?
- Suggestion ?
- Something not clear ?

BACKUP SLIDES

Credits

- Armando Fella – Pisa
- Bruno Santeramo – Bari
- Christian De Santis - Rome
- Giacinto Donvito - Bari
- Marcin Chrzaszcz - Kracow
- Miłosz Zdybał - Kracow
- Rafał Grzymkowski - Kracow

Thanks to DIRAC developers, expecially to
Andrei Tsaregorodtsev, Federico Stagni, Matvey Sapunov,
Krzysztof Daniel Ciba, Ricardo Graciani, Adrian Casajus

Groups

Groups and Role in VO and DIRAC

Group/Role	Type	Description	VO share	DIRAC mapping
/superbvo.org	Standard User	Generic user group	0	sb_user
/superbvo.org/Role=ProductionManager	Production Manager	User role related to MC production management	20	sb_productionmanager
/superbvo.org/Role=SoftwareManager	Software Manager	VO Software administrator	0	sb_softwaremanager
/superbvo.org/Role=Analysis	Standard User	User role related to analysis task	0	sb_analysis
	DIRAC administrator	DIRAC administrator		dirac_admin
	DIRAC pilot job	Useful for DIRAC		sb_pilot

Collaborative tools update

- SVN: <https://sbrepo.pd.infn.it:8911/projects/WebUi/browser/trunk/DIRAC>
 - Uploaded SuperBDIRAC module
 - Uploaded Severus (modified to work with DIRAC)

- Severus/version24/modules/fileManager.py
 - Line 109
 - Original
 - *out = self.lcgUtil.lfcLs(path)*
 - Modified
 - *out = self.lcgUtils.lcgLs(path)*
 - Why?: Workaround because surl starting with lfn:/ supposed to be accessed from CNAF (so Severus drop initial lfn:/ from surl and try to access input file locally)

Modifying Severus for DIRAC

- DIRAC job wrapper install its own python environment
 - Python version 2.6.6
- Severus tested to work with Python 2.4
 - Severus perform an intial python version check
 - Version24 directory contains all components
- Proposal
 - Test modified Severus with Python 2.6
 - New code under version26 directory
 - Modify severus.py to enable Python 2.6 usage

MC production via SuperBDIRAC

- SBK5 queries to be prepared - via SQLAlchemy and/or REST interface
 - SELECT count(runnum) as tot FROM "<session_name>"_Job " WHERE (prod_series = '<prod_series>') AND (runnum BETWEEN "<minrun>" AND "<maxrun>") AND (status!='prepared');
 - SELECT * FROM "<session_name>"_Job " WHERE (prod_series = '<prod_series>') AND runnum = '<runnum>';
 - UPDATE "<session_name>"_Job SET grid_job_id = "<job_id>", status = 'submitted', ts_submitted = cast(now) as timestamp(0) WHERE prod_series = '<prod_series>' AND runnum = "<runnum>" AND status = 'prepared';
 - UPDATE "<session_name>"_Submission SET bulk_job_id || ('<site>' => '<bulk_job_id>') WHERE uid = '<uid>' AND ts_prepared = '<timestamp>';

MC production via SuperBDIRAC

- Issue: SuperBDIRAC/ProductionSystem need to interact with SBK5
 - N.B. Now Severus can be properly launched only from CNAF (?)
 - SBK5 psql-like access only from CNAF
 - SBK5 access outside CNAF only via REST interface
 - Solution proposal:
 - Create a Service (temporary named SBK5Service) into SuperBDIRAC to cope (all?) SBK5 queries
 - Each site equipped with a DIRAC server and SBK5Service must be able to directly query SBK5
 - Enhance SBK5 REST interface by adding some views to simply perform needed queries from every DIRAC Server Instance
 - No changes to SBK5 access policy

SBK operations

- DIRAC webportal must replicate all WebUI features
- DIRAC/WebUI operations
 - Production creation → write
 - Production data retrieve → read
 - Request creation → write
 - Request data retrieve → read
 - Bulk job creation → write
 - Bulk job submission → read data for Severus
- Severus job wrapper
 - Job status report → write
 - Job Log registration → write

DIRAC API

- DIRAC offers a powerful set of API
 - We need a good quality documentation to speed up development
- API documentation
 - <http://diracgrid.org/files/docs/CodeDocumentation/API/index.html>
 - Epydoc generated – updated – maintained by developers
