

Future Linear Colliders

Thursday, 6 June 2013 11:00 (40 minutes)

In the European Strategy for Particle Physics the possible implementation of ILC in Japan for detailed Higgs studies in the near future, and development of CLIC technology for potential use in a machine at CERN after LHC, are both high-lighted. The newly established world wide Linear Collider Collaboration pursue both there objectives and technologies. The status, goals and immediate plans for these projects will be reviewed, with a special emphasis on the European efforts and capabilities in these projects.

Presenter: STAPNES, Steinar (CERN)

Session Classification: Plenary 8
