DIRC status

- The TODO list for end of June read thus:
  - Merge my local PacTrk and PravdaMC packages with the SVN repository.
  - Make PacDircReconstructor use the tracking error.
  - Account for gaps between DIRC bars.
- PacDircReconstructor now has an error term from the measured error on BtaCandidate momentum.
- Revision 199 of the repository contains DIRC code with all except the last two improvements.
- A new TODO item has been added: PacTrk now has a dependence on PacDirc, which breaks David Brown's design. It is therefore necessary to figure out how this dependency can be removed.
