

Direct and reverse IV on FBK sensors at different temperatures

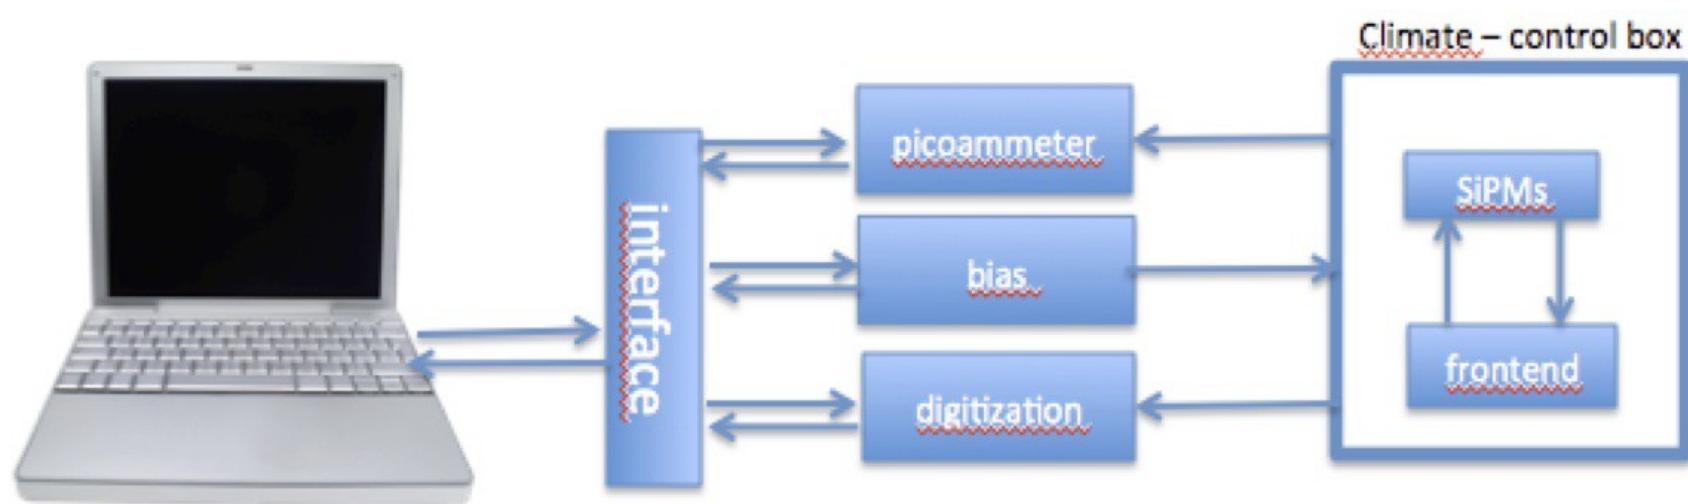

Stella Carlo
University of Udine & INFN sec. Trieste gr. Udine

Outline

- Goal
- Experimental setup
- Sensors & measurements
- Results
- Next steps
- Conclusions

Goal

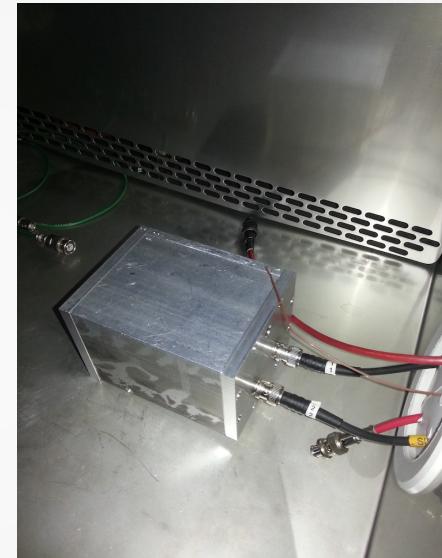

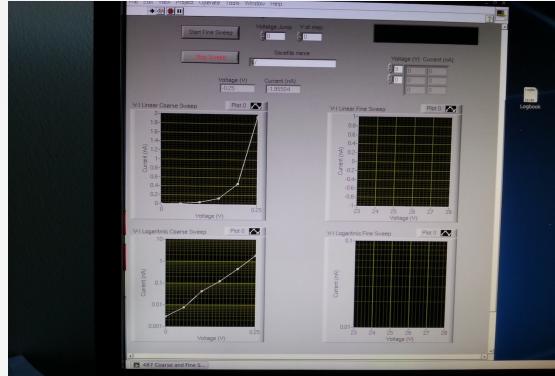

“We work to realize a semi-automatic test station”

Experimental setup

“At the present we have a manual test station with Software DAQ”

Software DAQ

Aluminium
shielding box

Climatic
chamber

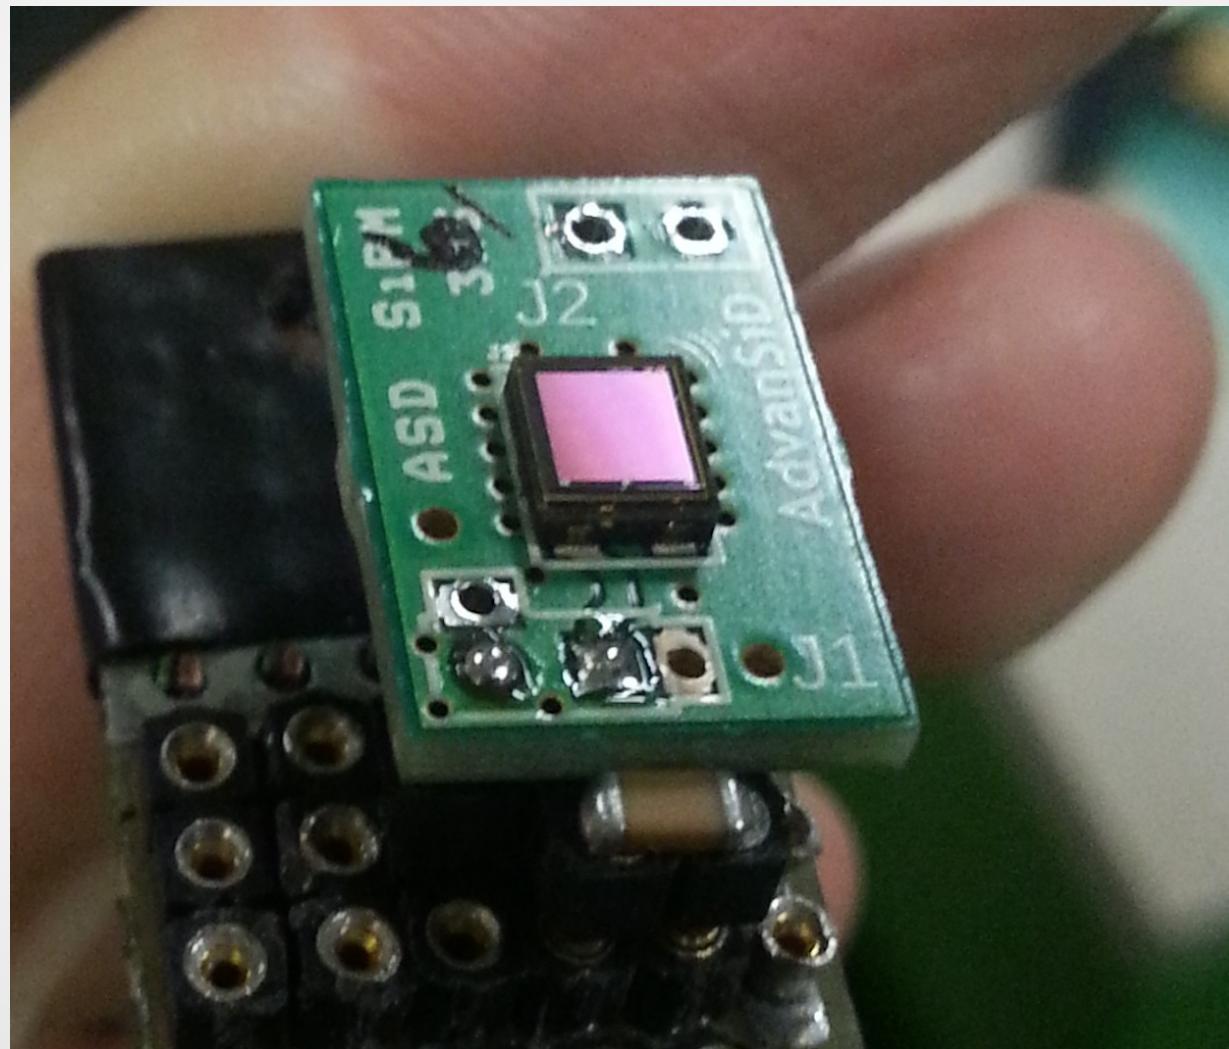

Picoammeter
voltage source

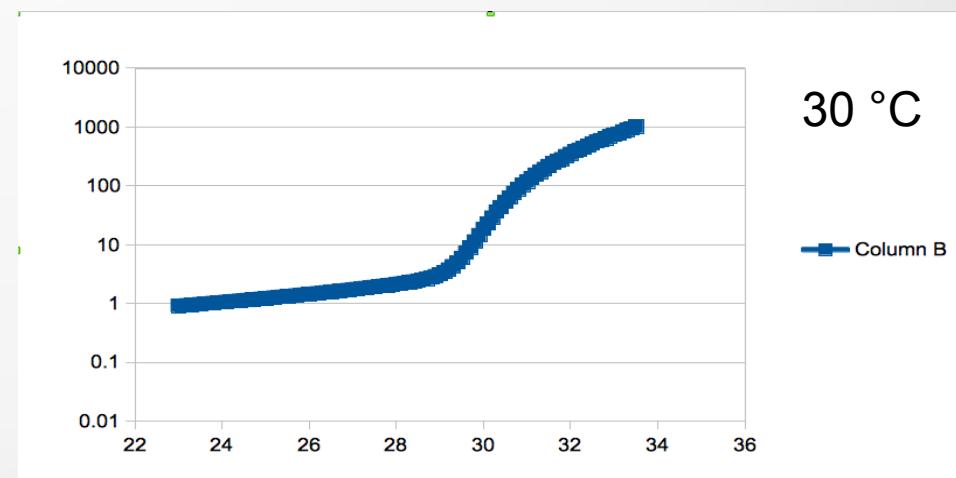

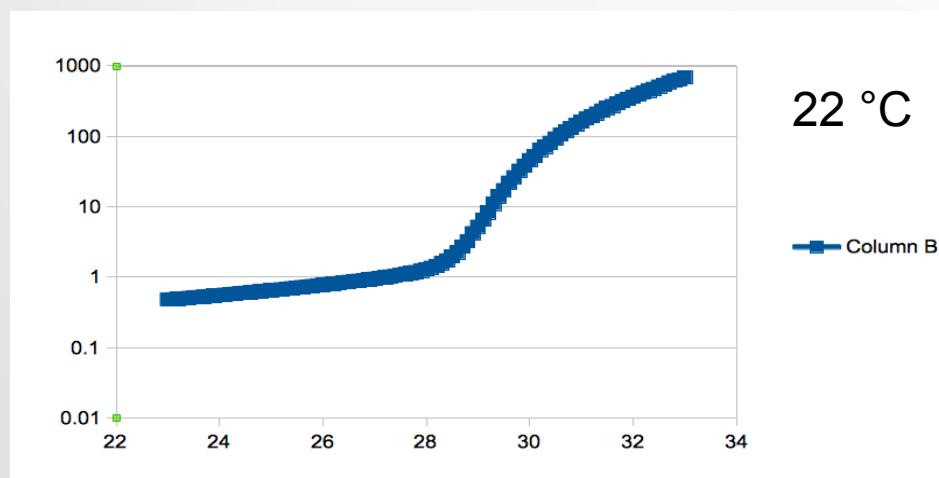

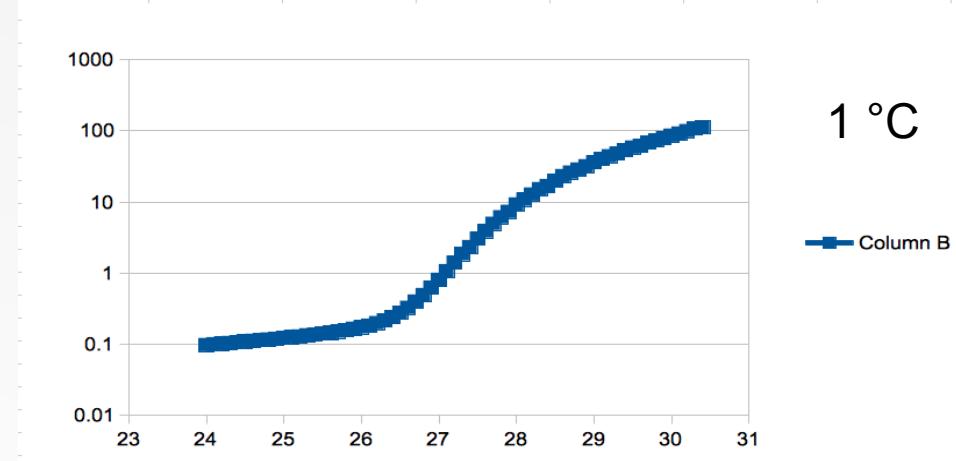

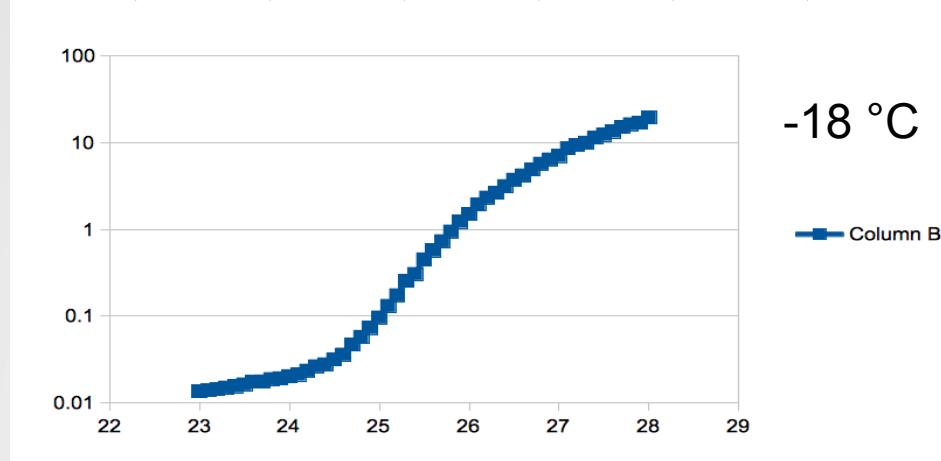

Sensors & Measurements

- Sensors:
 - FBK RGB 3x3 with 25 μm cells
 - FBK NUV 4x4 with 50 μm cells
 - Hamamatsu 3x3 50 μm cells (Preliminary)
- Measurements
 - Direct VI curve @ 4 temperatures (-18, 0, 21, 30 °C)
 - Reverse VI curve @ 4 temperatures (-18, 0, 21, 30 °C)

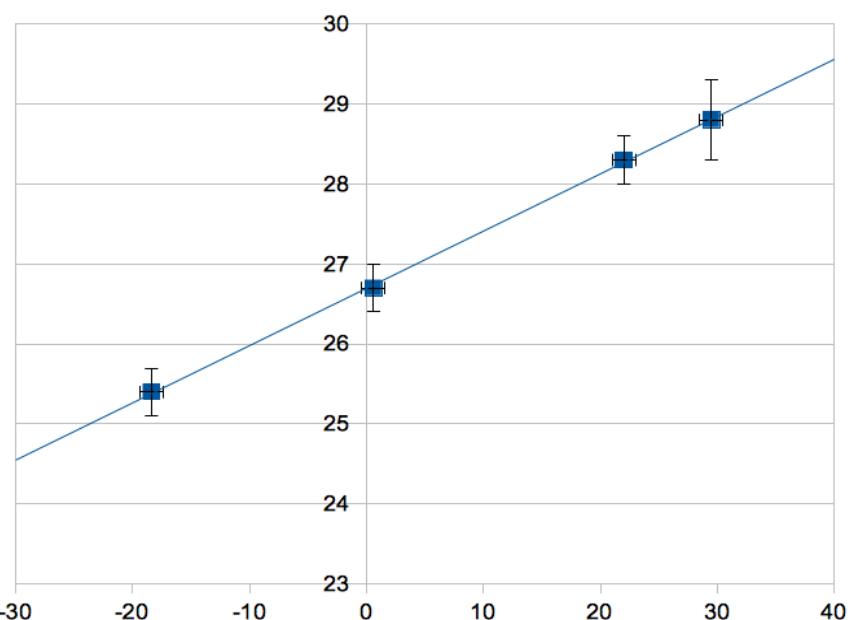

FBK RGB 3x3 25 μm

IV reverse FBK RGB 3x3 25 µm

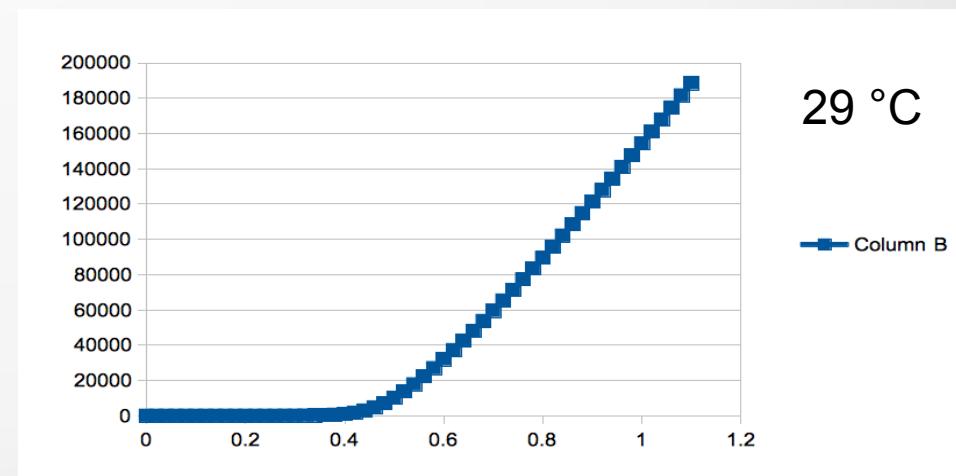

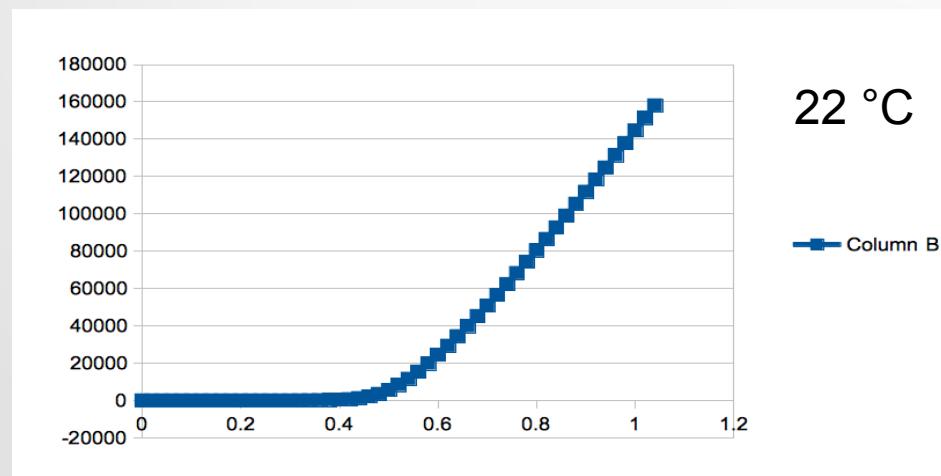

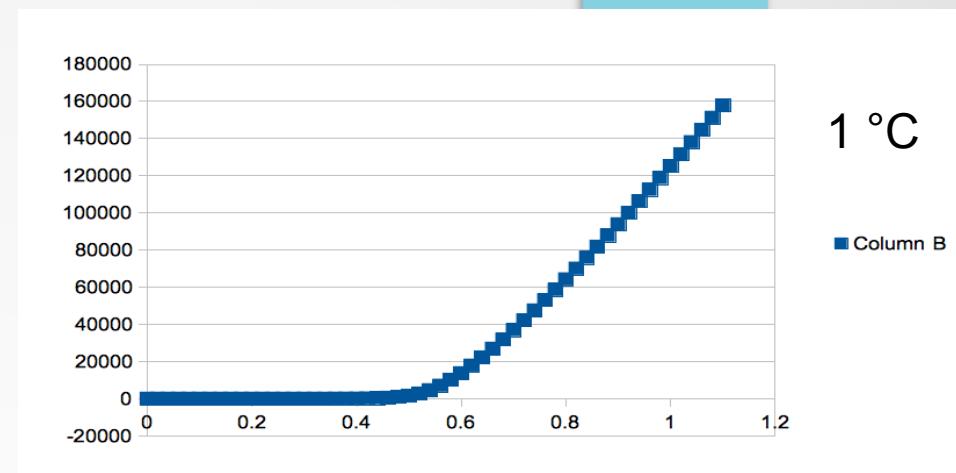

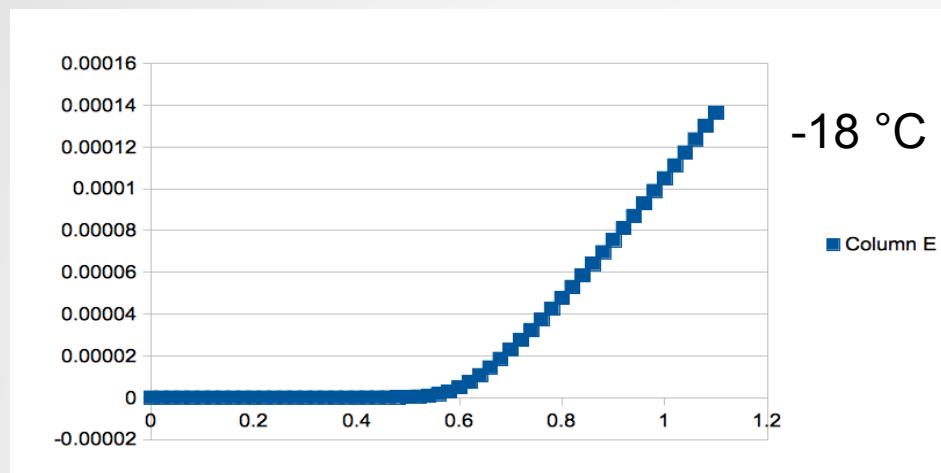

Breakdown voltage vs Temperature

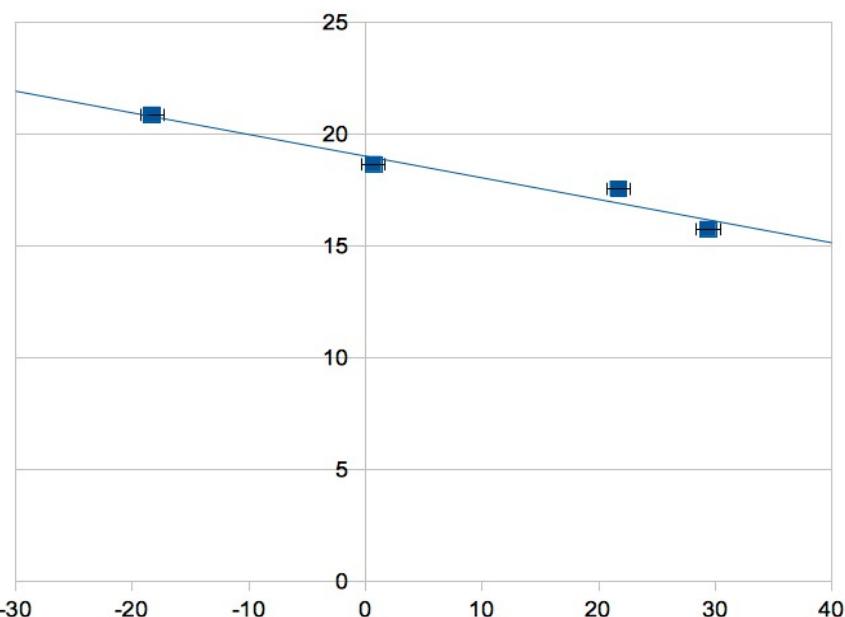

T (°C)	Vbd (V)
-18	25.4
1	26.7
22	28.3
30	28.8

- Breakdown voltage temperature sensitivity = $72 \text{ mV/}^\circ\text{C}$

IV direct FBK RGB 3x3 25 µm

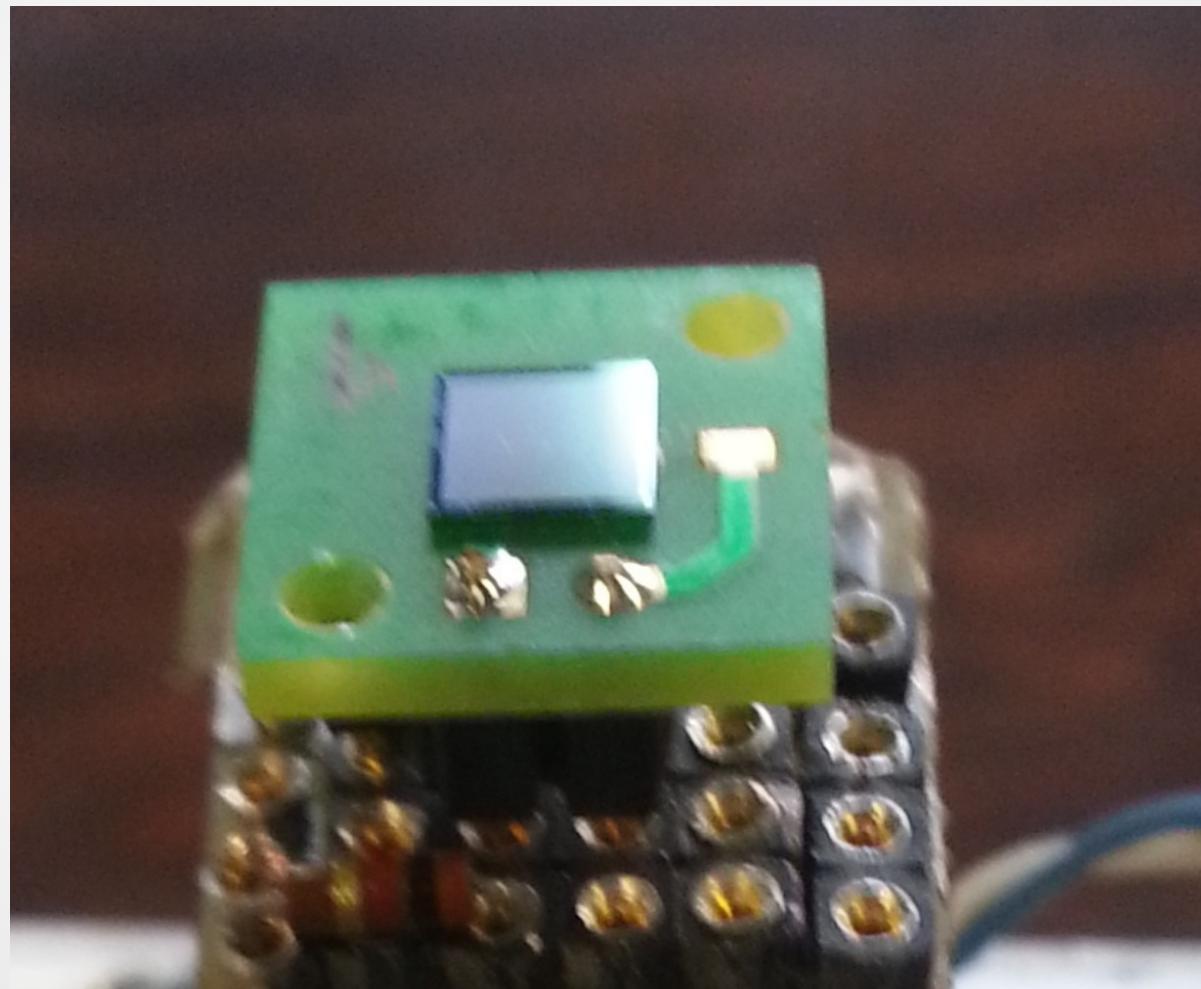

Cell resistance vs Temperature

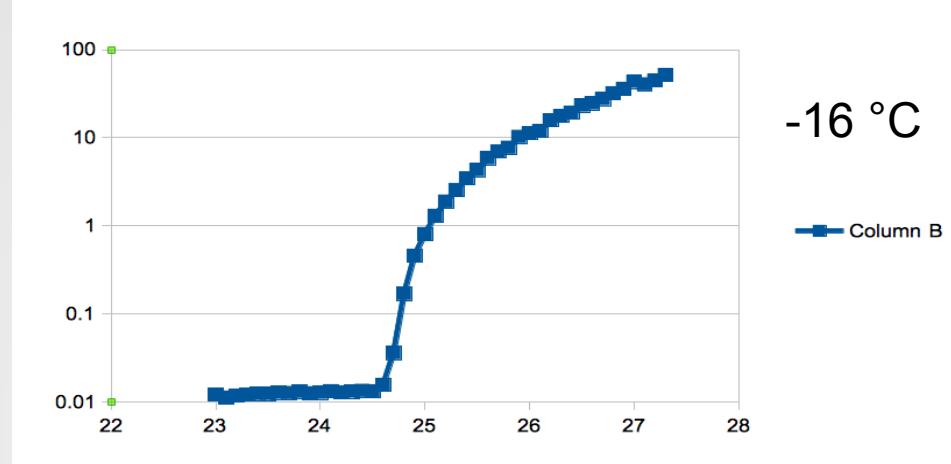

T (°C)	R cell (MΩ)
-18	25.4
1	26.7
22	28.3
29	28.8

- Cell resistance temperature sensitivity = $-97 \Omega/\text{K}^{\circ}\text{C}$

FBK NUV 4x4 50 μm

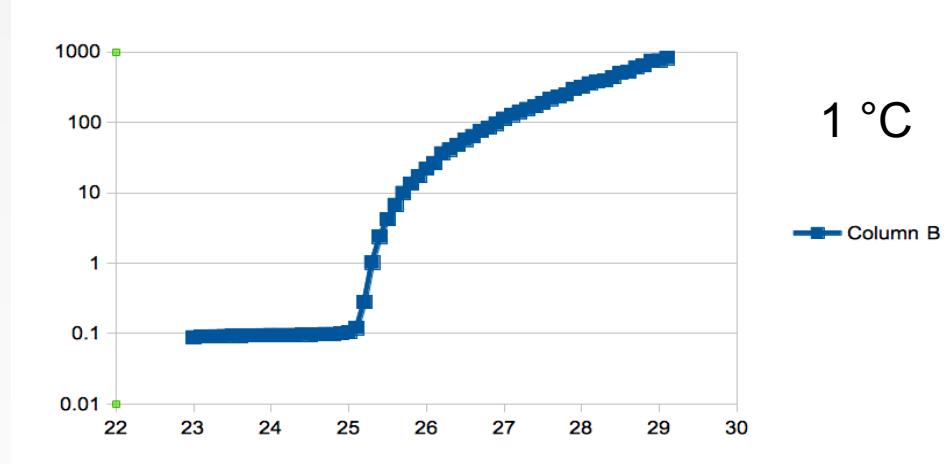

IV reverse FBK NUV 4x4 50 µm

$-16\text{ }^{\circ}\text{C}$

Column B

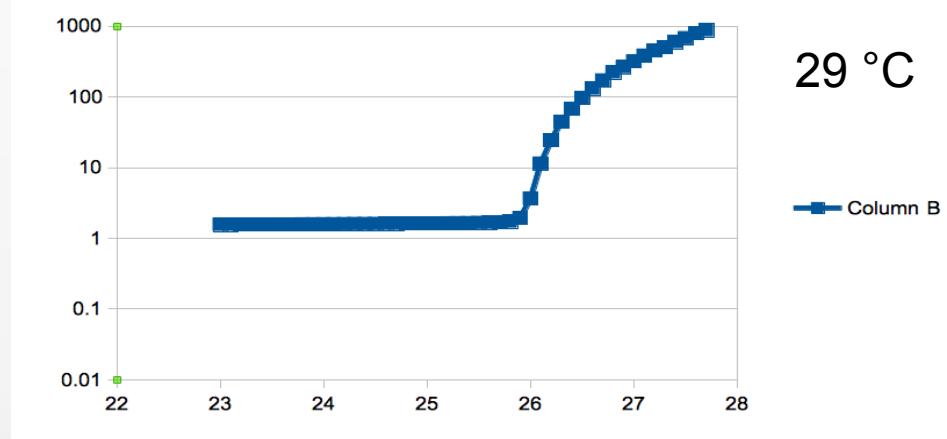

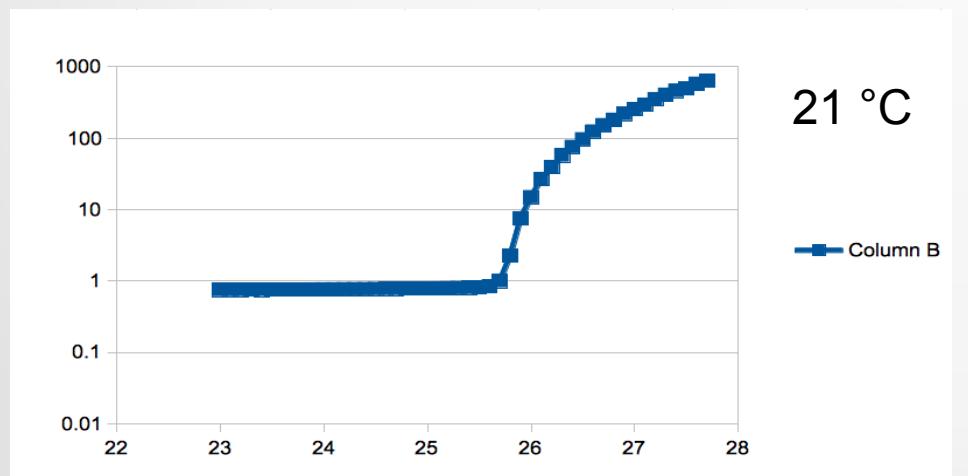

$1\text{ }^{\circ}\text{C}$

Column B

$21\text{ }^{\circ}\text{C}$

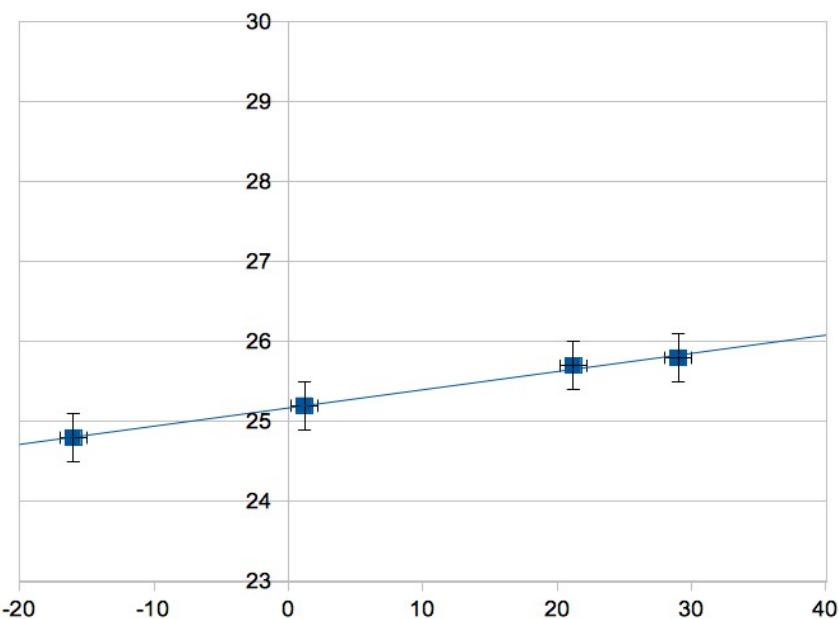

Column B

$29\text{ }^{\circ}\text{C}$

Column B

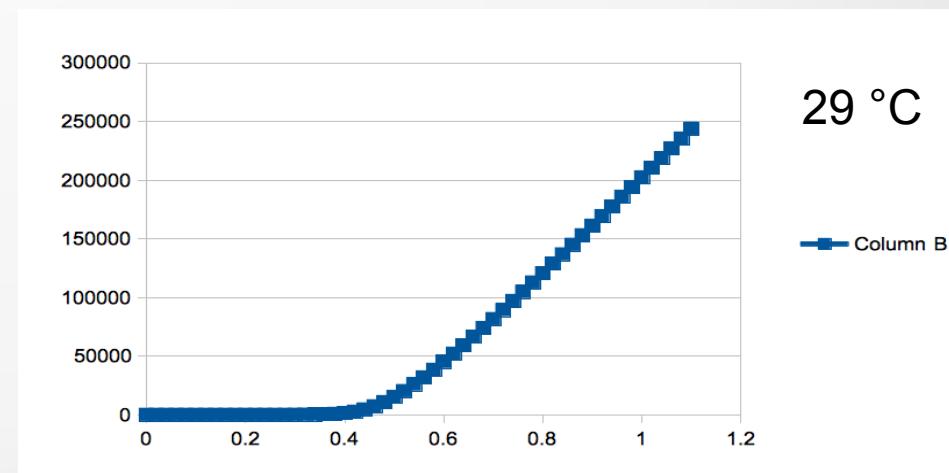

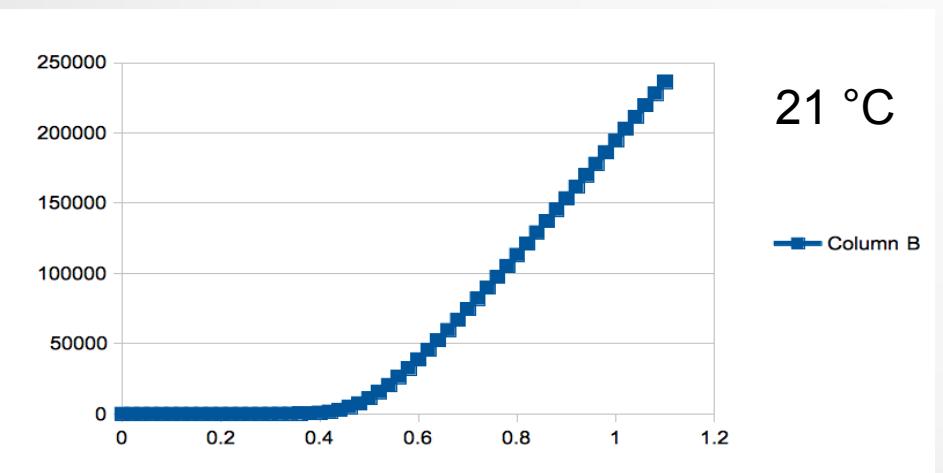

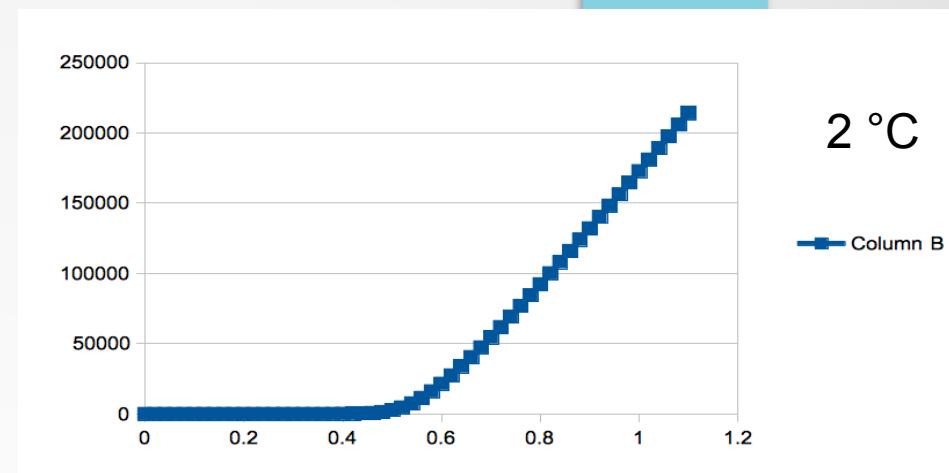

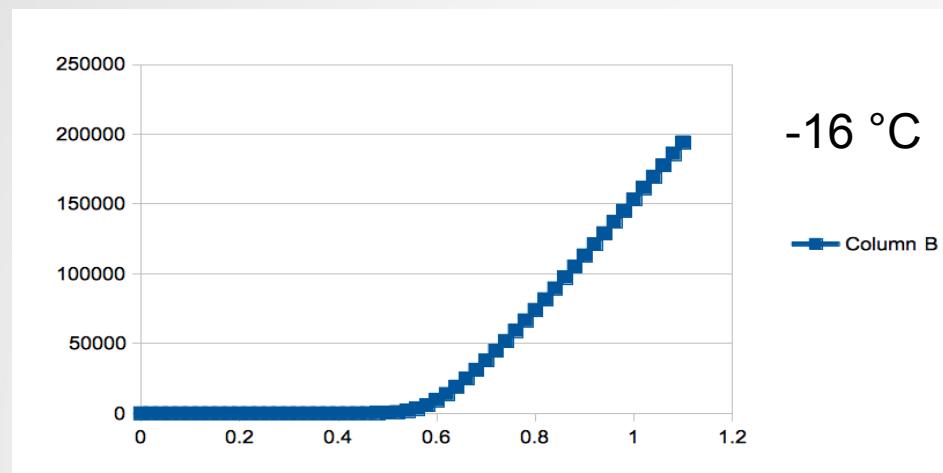

Breakdown voltage vs Temperature

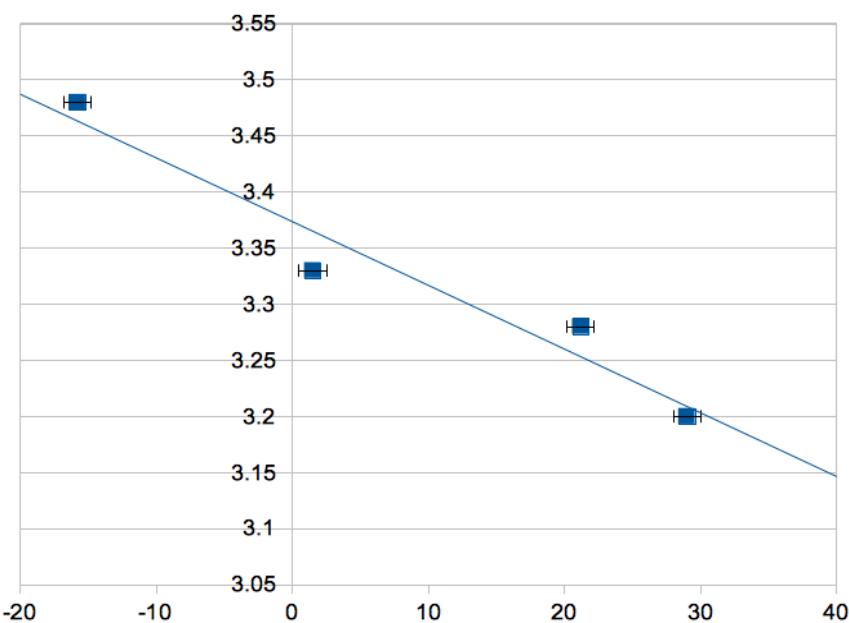

T (°C)	Vbd (V)
-16	24.8
1	25.2
21	25.7
29	25.8

- Breakdown voltage temperature sensitivity = $23 \text{ mV/}^{\circ}\text{C}$

IV direct FBK NUV 4x4 50 μm

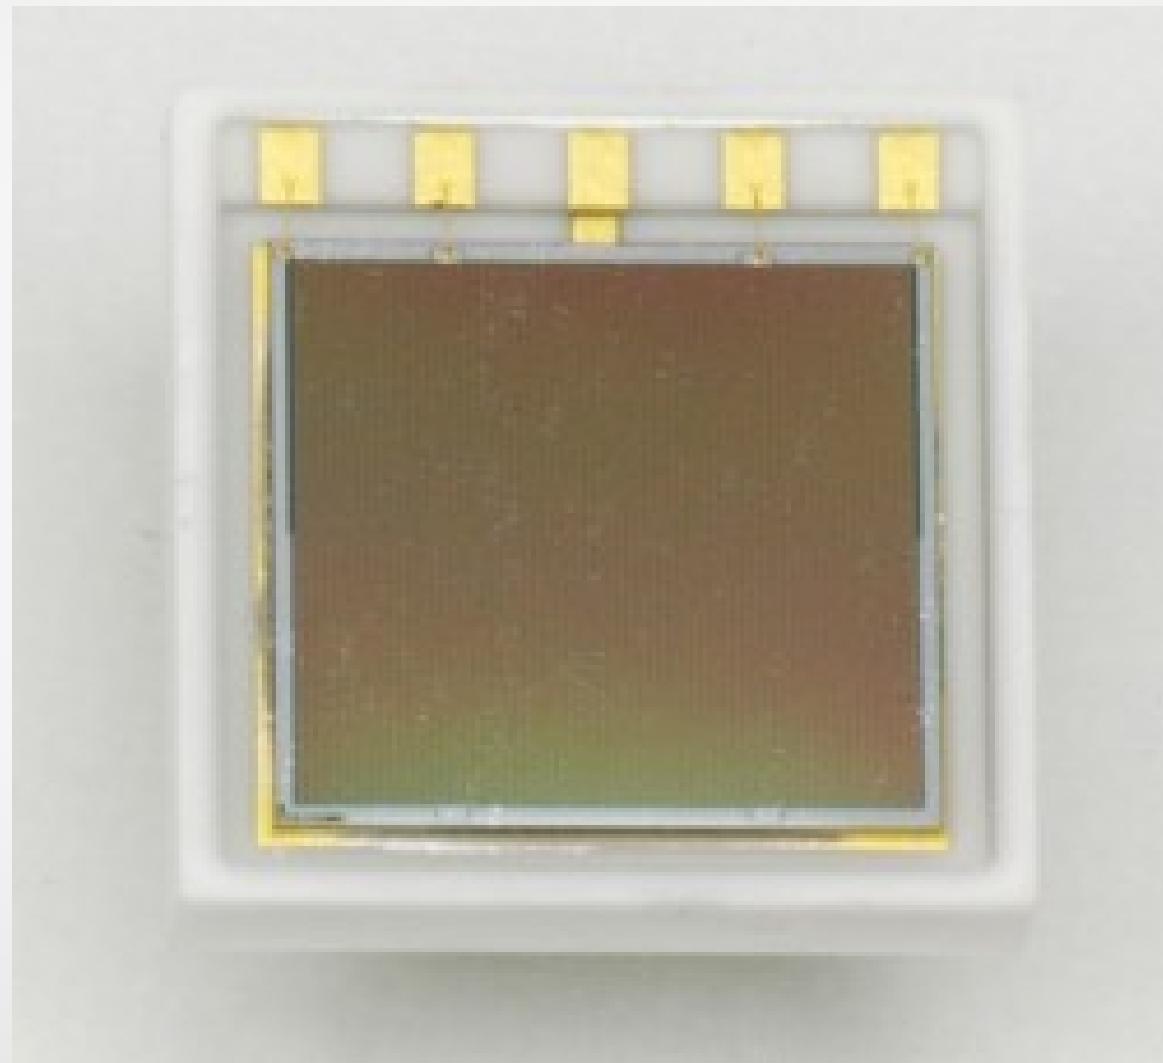

Cell resistance vs Temperature

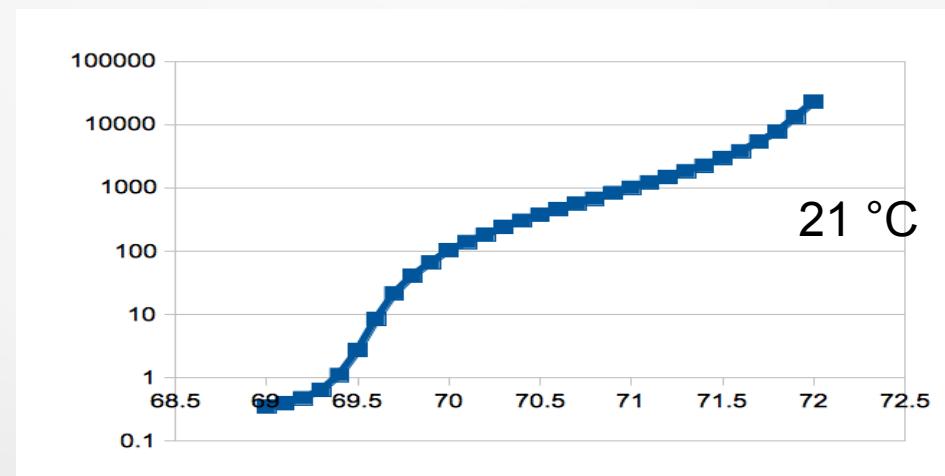

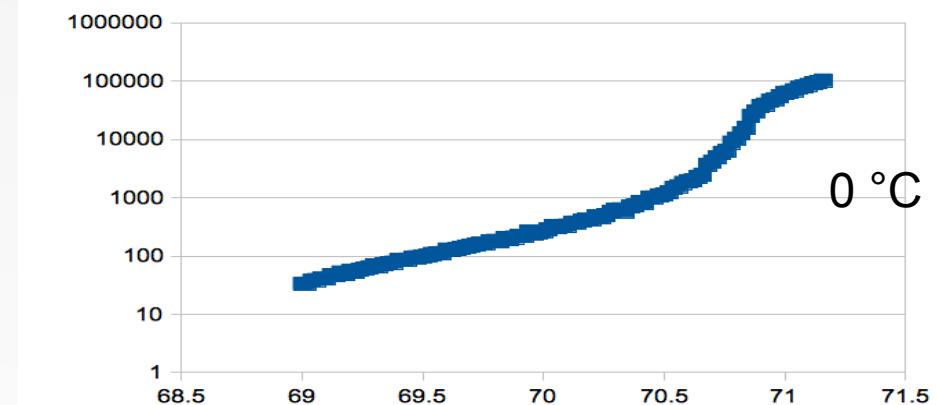

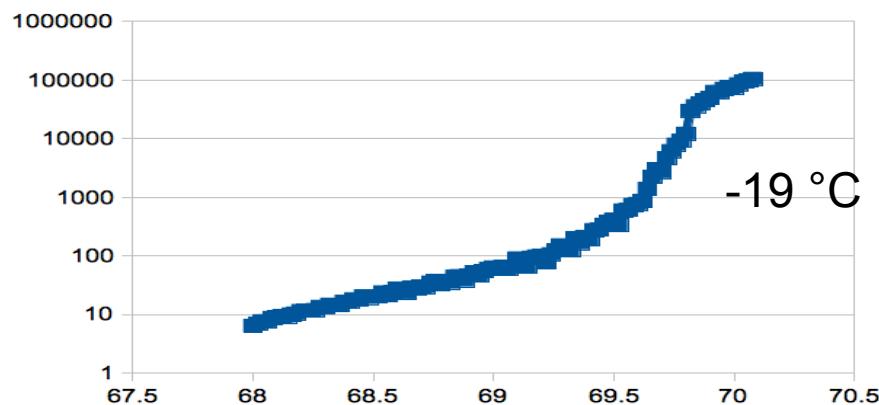

T (°C)	R cell (MΩ)
-16	3.48
2	3.33
21	3.28
29	3.2

- Cell resistance temperature sensitivity = $-6 \Omega/\text{°C}$

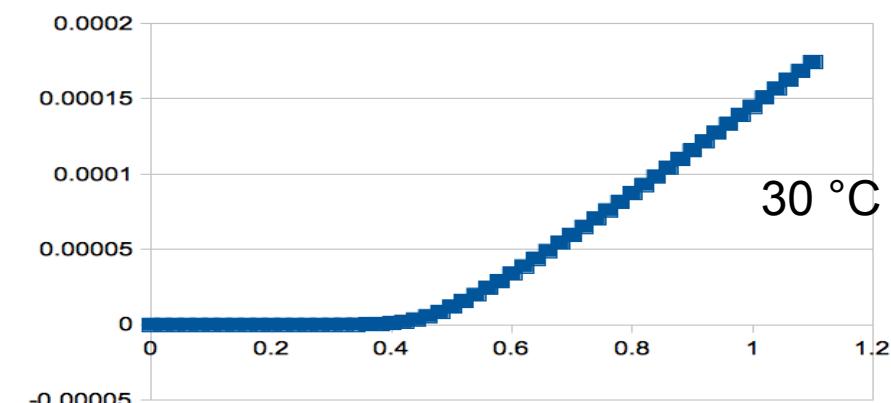

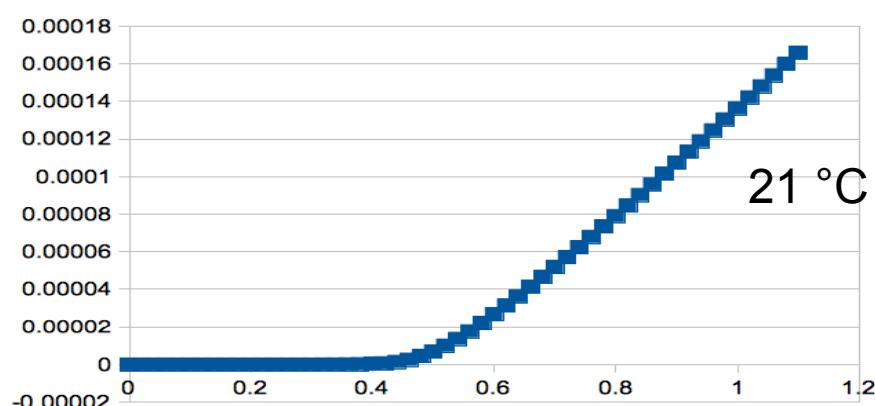

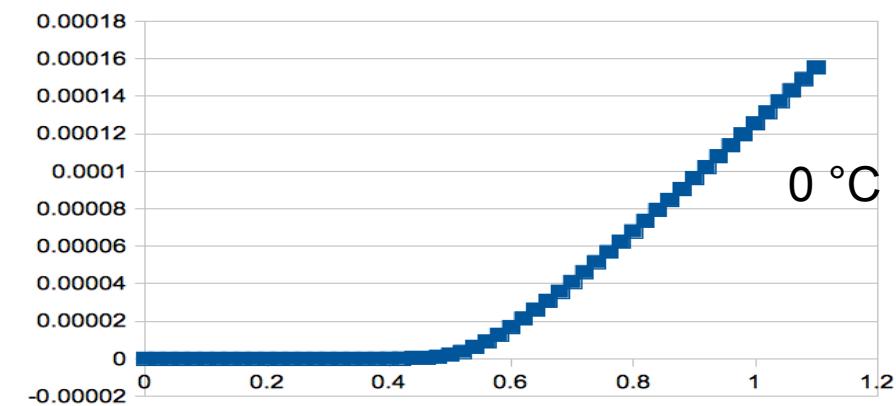

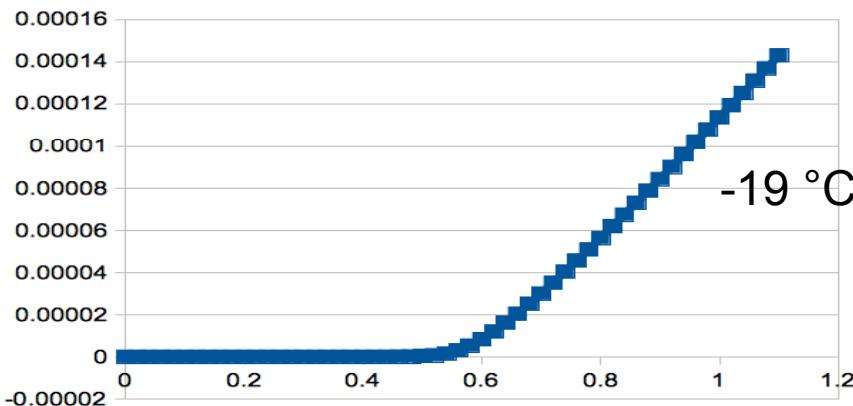

Hamamatsu 3x3 50 μm (Preliminary)

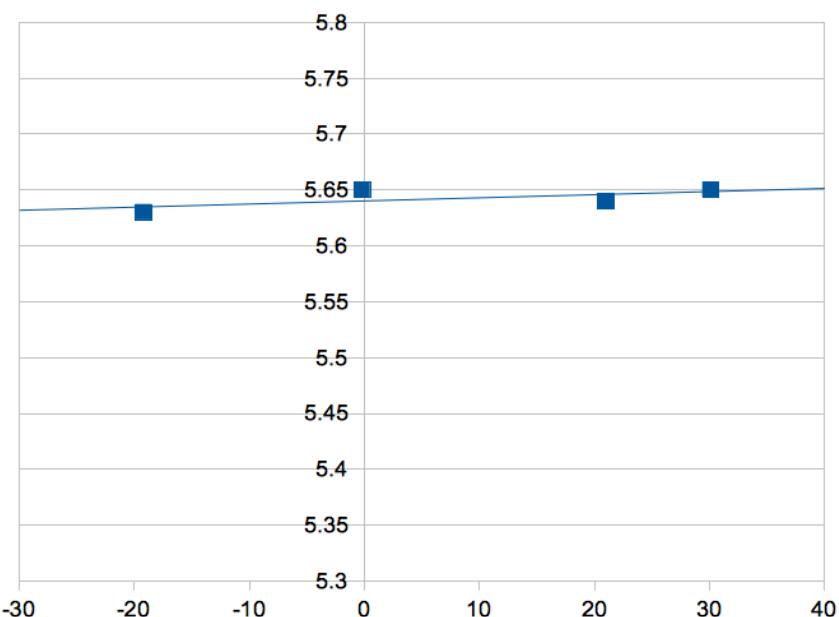

IV reverse Hamamatsu 50 µm

IV direct Hamamatsu 50 µm

Cell resistance vs Temperature

T (°C)	R cell (MΩ)
-19	5.63
0	5.65
21	5.64
30	5.65

- Cell resistance temperature sensitivity = $0.3\Omega/\text{K}^{\circ}\text{C}$

Dark Count (Oscilloscope Theft Problem)

To know the dark count... you need the oscilloscope

Università di Udine, furto nel laboratorio di Fisica

I ladri si sono introdotti in pieno giorno nel polo scientifico dei Rizzi e hanno rubato 4 oscilloscopi usati dai ricercatori per guardare i segnali elettrici. Non è escluso che si tratti di un colpo su commissione. Il danno ammonta a circa 40 mila euro.

UDINE. Furto all'università di Udine. I ladri, in pieno giorno, sono entrati nel laboratorio di fisica situato al primo piano nel polo scientifico dei Rizzi, e da qui hanno asportato quattro oscilloscopi usati da fisici e informatici per osservare i segnali elettrici. Trattandosi di attrezzi molto particolari non è escluso che si sia trattato di un furto su commissione. Il danno ammonta a circa 40 mila euro.

Next steps

- Finish the IV measurements (work in progress)
- Dark Count and Cross-Talk vs T (work in progress)
- Afterpulse vs T
- Gain (for single photo-electron)
- Dynamic characterization

Conclusions

Although we have experienced some minor problems we are proceeding to produce an efficient semi-automatic test station for static and dynamic characterization.

We plan to have new data for the next meeting

Thank you for listening
