Results from the PAMELA space experiment

Friday, 23 May 2014 09:25 (25 minutes)

Launched on 15th June 2006, the PAMELA apparatus is still collecting data more than doubling the expected life time. A review of the most significant results obtained by PAMELA will be presented with particular emphasis on the precision of the measurements addressing the issue of systematic and statistical errors. Moreover, results about the ongoing analyses about solar modulation and solar flares will be discussed.
