## **PS3-06 Observation of Channeling Effects for Relativistic Electrons in a Polycrystal**

*giovedì 9 ottobre 2014 17:00 (1O 30m)*

Channeling phenomena have been extensively studied using mainly single crystals as targets. In this report, we present experimental results on channeling effects for 255-MeV electrons in a Mo polycrystal. Its applications to beam manipulation techniques and radiation sources are also discussed.
