

ttH production at the LHC

Wednesday, 12 March 2014 10:30 (45 minutes)

The associated production of a Higgs boson with top quarks is going to give direct access to the top-Higgs Yukawa coupling and will play a crucial role in constraining new physics from a combined measurement of Higgs-boson couplings. In this talk we will review the theoretical work done to provide reliable tools for present and future experimental analyses.

Presenter: REINA, Laura (Florida State University)
